# Technical Commentary for Standard Plan B-60.20 Connection Details for Dissimilar Culvert Pipe

## General Information

Background:

## Updates / Comments

In August 2006, all the B series Standard Plans were renumbered and similar items were grouped. The numbering system changed from an alpha-numeric-alpha system to an alpha-numeric-decimal system. Standard Plan B-28 became B-60.20.

This plan was added October 1996. Pipe collars are used when joining pipes of dissimilar materials, (ie extending existing culverts for roadway widening). They have been used extensively in the past by adding the cad detail to the plans and including a special provision.

## Applicable Specifications

Section <a href="#">6-02</a>	Concrete Structures
Section <a href="#">7-08.3(2)G</a>	Jointing of Dissimilar Pipe
<a href="#">7-08.5</a>	Payment
