

# WSDOT FERRIES DIVISION FLEET GUIDE

Washington State Ferries

## Washington State Ferries operates the largest ferry fleet in the United States.

Twenty-one ferries cross Puget Sound and its inland waterways, carrying nearly 24 million passengers to 20 different ports of call. From Tacoma, Washington, to Sidney, British Columbia, Canada, we travel across the Sound, as the marine highway for commuters and commercial and recreational users.

There are about 2,000 dedicated employees who have made Washington State Ferries one of the most popular tourist attractions in the state.

In the fleet, the captain (or master) supervises the entire ship's operation from the pilothouse, which is the communications and navigation center of the ship. The Chief Mate assists the Captain with the operation of the vessel, often including loading and unloading operations. Except when docking or in tight quarters, the steering of the ship is generally left to the quartermaster who follows the directions of the bridge officer. Able-bodied Seamen and Ordinary Seamen work as deckhands, directing vehicles, securing lines when the ship docks, acting as lookouts, patrolling the vessel for safety and security hazards, and cleaning the vessel.

Beneath the car deck, the engine room and control center are supervised by the Chief Engineer, who oversees repairs and maintenance of the vessel's mechanical and electrical equipment. The Chief Engineer and the Assistant Engineer also monitor all the control systems and in some instances, control the speed of the vessel, following the Captain's commands. The Oiler assists the Engineers by circulating through all the machinery spaces, ensuring that everything is operating correctly.

This Ferry Fleet Guide is designed to answer vessel specific questions we are most frequently asked about our fleet. Because this information may change, we encourage you to visit our website at <http://www.wsdot.wa.gov/ferries/vesselwatch/vessels>.
