NOTES (Anchoring and Joining Barrier)

1. Precast Concrete Barrier Type F can be installed in the following configurations:
   A. Unanchored on hot mix asphalt (HMA), or cement concrete pavement in permanent or temporary installations, and on unpaved soil in temporary installations. It is permissible to manufacture the Type F barrier without pin slots and pin slot bars when barrier is not anchored.
   B. Anchored on hot mix asphalt (HMA) or cement concrete pavement in permanent or temporary installations as shown on this plan. See Section K-80.35 and K-80.37 for anchoring Type F Narrow Base in temporary installations on cement concrete pavement or bridge decks.

2. See Standard Plan C-60.70 for anchoring patterns when transitioning from Type F anchored runs to another type of barrier run.

3. After removing the anchoring pins, clean the pin holes and fill them with sealant according to Standard Specification Section 9-04.2.

4. Remove slack between barrier segments after inserting the connecting pin.
