NOTES

1. The intent of this plan is to provide a transition from the anchored Type F concrete barrier system to various types of concrete barrier systems (e.g., Single Slope) up to 42" (in) tall. This transition plan applies to roadside or wide median applications where the barrier transition can be impacted on the Traffic Side Only. This transition can also be installed on cement concrete pavement or hot mix asphalt pavement.

2. Transition Installation Procedure:
   1) Procure a segment of Type F Concrete Barrier (Standard Plan C-60.10).
   2) Cut the end loops off of the Loop Bars of the Type F section located closest to the dissimilar shaped concrete barrier section.
   3) Abut the two sections and align the top front edges (traffic side) of the barrier sections. (See Section C, this sheet).
   4) Install the nested thin beam rail on the traffic side, the barrier connection strap bar on the field side, and the transition shield to secure the two barrier sections together.
   5) Install the anchor pins.

3. Refer to Standard Plan C-60.10 Concrete Barrier Type F for additional details not shown on this plan.

4. Refer to Standard Plan C-1a Beam Guardrail (Thre Beam) and C-7a Thre Beam End Sections for additional details not shown on this plan.

5. Install rectangular guardrail plate washers under the bolt head on upstream end and under the nut on the downstream end. See sheet 2 for details.

6. Lap thin beam and thin beam end section in direction of adjacent traffic. The upstream thin beam end section is installed on top of thin beam rail, and the downstream thin beam end section is installed under thin beam rail.

7. Embed anchor bolt 6" (in) into barrier and secure to barrier with Type I epoxy. Core drill 1 1/2" (in) diameter holes into top of barriers.

8. For barrier transition pinning details, see Standard Plan C-60.70.
**TRANSITION SHROUD DETAIL**

(10" IN TALL TRANSITION SHROUD SHOWN)

1/8" THICK STEEL PER ASTM A36

HOT DIP GALVANIZED, AFTER FABRICATION PER ASTM F2323

**TRANSITION SHROUD NOTES:**

1. Prior to transition shroud fabrication, verify the height of the dissimilar shaped barrier that the 32" (in) Tall F-shape transition is abutting to, Shroud height (H) ranges from 1" to 10" tall.

2. For dimensions not shown in the table, interpolate dimensions.

3. No transition shroud is necessary if the dissimilar shaped barrier is the same height, or up to 1" (in) taller than the 32" (in) Type F barrier.

4. Barriers that Type F barrier may transition to include but are not limited to:
   - A. Concrete Barrier Type 2 – See WSDOT Plan Sheet Library for details
   - B. Single-Slope Concrete Barrier (Precast) – See Standard Plan C-70.10 for details
   - C. Single-Slope Concrete Barrier (Clip) – See Standard Plan C-80.10 for details
   - D. High Performance (HP) Single-Shaped Concrete Bridge Barrier – See Bridge Standard Drawings
   - E. High Performance (HP) F-Shape Bridge Barrier – See Bridge Standard Drawings
