Foreword

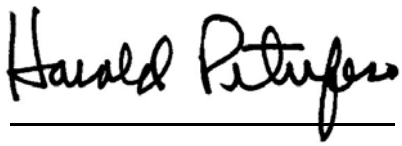

This *Standard Plans Manual* contains engineering drawings that are used for road, bridge, and municipal construction. These drawings have been prepared under the direct supervision of a professional engineer, licensed in the state of Washington, who is knowledgeable in the specialized field of civil engineering depicted in that drawing. This manual standardizes fabrication, installation and construction methods for specific items of work and complements the contract documents and the English version of the *Standard Specifications for Road, Bridge, and Municipal Construction.*

Updating the manual is a continuous process and revisions are issued periodically. Questions, comments, and recommendations for changes are welcome. The *Comment Request Form* on the reverse side of this page is provided to encourage comments and assure their prompt delivery. Use copies of the form to send any attachments, such as marked copies of specific standard plans. Your comments should be sent to ***Design Standards Graphics***, Transportation Building, Olympia, WA 98504-7329.

Bentley MicroStation DGN CAD files, Adobe PDF files and some AutoCAD DWG CAD files can be downloaded from the Design Standards Graphic website at: **http://www.wsdot.wa.gov/eesc/cae/std_plan/**

Contact the **Standard Plans Office** at **(360) 705-7246** if you have questions about the technical content of this manual.

Additional copies of this manual can be ordered from the **Engineering Publications Office (360) 705-7430.**

Harold Peterfeso
State Design Engineer

The plan above represents only the basic 12′ x 25′ slab module with skew. All approach slab construction shall be for full width of traffic lanes and shoulders at both ends of the bridge. For slab extension to include shoulders, continue reinforcing steel spacing and slab thickness in the same relationship as in the basic slab module.

PLAN

Ⓔ Epoxy Coated reinforcing steel

APPROXIMATE QUANTITIES (NO SKEW)	
Epoxy coated steel reinforcing bars (lbs.)	862
Total steel reinforcing bars, excluding epoxy coated (lbs.)	2156
Additional steel per joint (lbs.)	30
Concrete (cu. yd.)	12
Bridge approach slab anchor	6

BENDING DIAGRAM

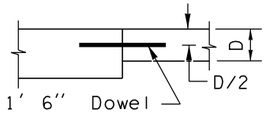

NOTES

1. Design guidance shall be requested from Bridge and Structures Office:
   a. When skew exceeds 45°.
   b. When pavement seat exceeds 1′-1″ (EXCEPT, if bridge deck is overlaid, slab thickness shall be increased to match top of overlay).
2. For multi-lane roadway, or for roadway with shoulders, all transverse steel bars may be full width, less 2″ clear per side.
3. When bridge is "L" Type Abutment, a ½″ premolded joint filler will be used (see "L" Type Abutment Joint Detail, Sheet 2).

TRANSVERSE SECTION

CONSTRUCTION NOTES

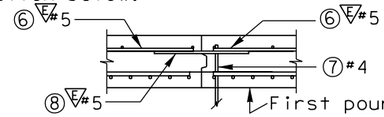

1. For PCC roadway, insert dowels parallel to center line at 1′ O.C. along transverse construction joint. Additional details are shown on elevation below.

1¼″ DIA x 1′ 6″ Dowel

2. Approach slab edge treatment
   (a) Expansion joint between bridge deck and slab
   - edge both sides with ½″ R.
   (b) Longitudinal exterior edge
   - edge with ½″ R.
   (c) Transverse construction joint between slab and PCC roadway
   - edge both sides with ½″ R.
   (d) Longitudinal construction joint between adjacent lanes, only when required
   - edge first pour only with ⅛″ R.

   Additional details are shown on section below:

3. Top reinforcement shall be supported by Mark 7 bars driven into subgrade on approximately the following centers:
   3′-0″ longitudinally
   2′-6″ transversely

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

METHOD A

METHOD B

Ⓐ Anchor Rod, ¾'' DIA x length as follows:
Method A: One-piece 1' 10'' long, threaded 8'' MIN, for bridge deck embedment. Grout per Special Provisions.
Method B: Two-piece: 1' 3½'', threaded 2'' MIN, on end away from anchor head. 0' 10'', fully threaded 3'' MIN each end.

Ⓑ Pipe, polyethylene or PVC, 1'' DIA x 1' long

Ⓒ Preformed joint filler, ½'' thick x full depth

Ⓓ 1½'' DIA x 8'' hole, only for one-piece anchor rod installation.

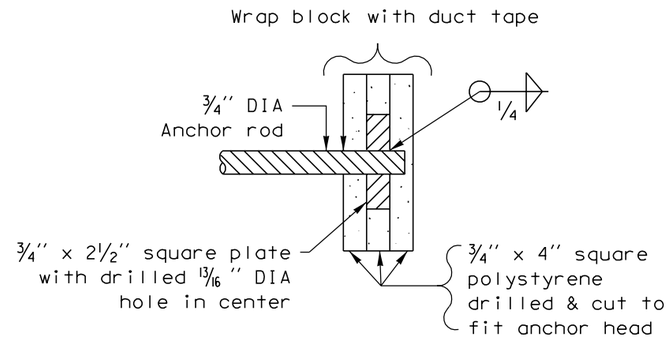

Ⓔ Pavement seat, dimensioned as per plans. Cover with one layer 15# asphaltic building felt.

Ⓕ ¾'' stop type coupler with a minimum ultimate strength of 20,000 pounds. (Williams C2T or approved equal).

Ⓖ ¼'' x 2½'' square plate with 2 nuts.

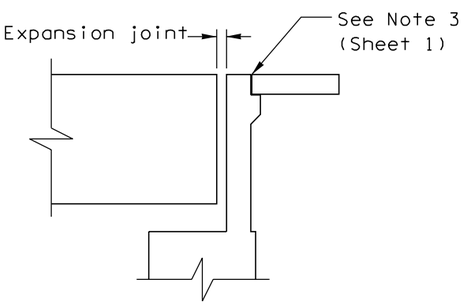

Bridge Approach Slab Anchors shall be placed 1' from outside edge of pavement and on 2' centers for full roadway width along back of bridge pavement seat, parallel with roadway centerline.

BRIDGE APPROACH SLAB ANCHOR

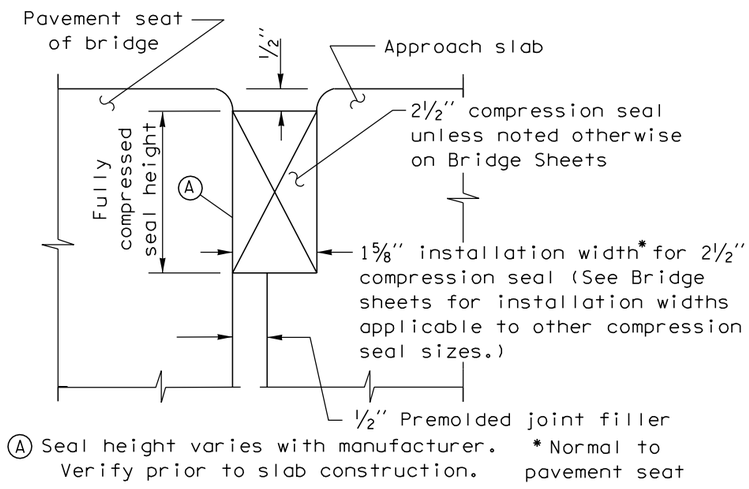

Paint metal components of anchor assembly with one coat of Formula A-9-73 (See Std. Spec. 9-08.2)

NOTES

1. Plane a taper into the existing pavement and shoulders (if paved). Depth shall taper from 0" at the beginning of pavement, to 1" at end of taper. Does not apply when exisitng pavement has been planed.

2. Before placing overlay, remove top 2" of existing joint filler, or 3" if existing joint is fiberboard, and block out the joint. After overlay, install new premolded joint filler. Top of joint filler shall be between 3/16" and 3/8" below overlay. When a compression seal is in place, see Bridge Plans.

3. Before placing overlay, block out the joint. After overlay, install premolded joint filler or rubberized asphalt filler. Top of joint filler shall be between 3/16" and 3/8" below overlay.

4. Full depth sawed grooves between 1/8" and 1/4" wide shall be placed directly over the existing sawed grooves in the cement concrete pavement and cement concrete shoulders.

5. Cement concrete shoulders shall be overlaid with cement concrete. Asphalt concrete shoulders shall be overlaid with asphalt concrete.

SECTION A-A

NOTES

1. Pipe supports and restrictor/separator shall be constructed of the same material and be anchored at a maximum spacing of 36". Attach pipe supports to manhole with 5/8" stainless steel expansion bolts or embed supports into manhole wall 2".

2. The vertical riser stem of the restrictor/separator shall be the same diameter as the horizontal outlet pipe with a minimum diameter of 8".

3. The flow restrictor/separator shall be fabricated from one of the following materials:
   0.60" Corrugated Aluminum Alloy Drain Pipe
   0.64" Corrugated Galvanized or Aluminized Steel Drain Pipe
   0.60" aluminum alloy flat sheet, in accordance with ASTM B 209M, 5052 H32 or EPS
   Galvanized steel shall have Treatment 1.

4. Frame and ladder or steps are to be offset so that:
   Shear gate is visible from the top; climb-down space is clear of riser and gate; frame is clear of curb.

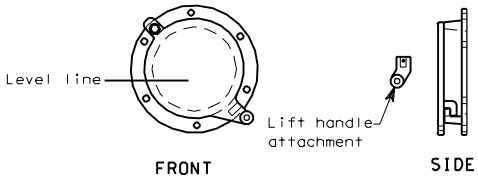

5. Multi-orifice elbows may be located as shown or all on one side of riser to assure ladder clearence.
   Size of elbows and placement to be specified in the Contract.

6. Restrictor plate with orifice as specified in the Contract. Omit plate if for oil pollution control only.
   Opening is to be cut round and smooth.

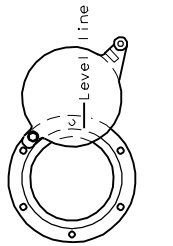

7. Shear gate shall be made of aluminum alloy in accordance with ASTM B 26M and ASTM B 275, designation ZG32A or cast iron in accordance with ASTM A 48, Class 30B.
   Lift handle may be solid rod or hollow tubing with adjustable hook as required.
   Neoprene rubber gasket required between riser mounting flange and gate flange.
   Mating surfaces of lid and body shall be machined for proper fit.
   Flange mounting bolts shall be 3/8" diameter stainless steel.

8. Shear gate maximum opening shall be controlled by limited hinge movement, stop tab or some other device.

9. Alternate shear gate designs are acceptable, if material specifications are met and flange bolt pattern matches.

PIPE

ELEVATION

PIPE ARCH

SECTION A-A

PIPE AND PIPE ARCH

NOTES

1. The diameter of the end section of Design B shall match the inside diameter of the concrete pipe.
2. Skirt sections shall be made in one piece for round pipe with a diameter of 12" to 24" inclusive and for pipe arches with a rise of 13" to 20" inclusive. Skirt sections for larger sizes of pipes may be multiple pieces in conformance with the tabulated values shown.
3. Design A end sections for 42" thru 84" diameter and 49" x 33" thru 83" x 57" arch with annular corrugations and all helically corrugated pipe arch include one foot of pipe length as a connector section. The connector section shall be attached to the end section by welds, rivets or bolts and shall be the same thickness as the end section.
4. Design C may be used in lieu of Design A for all metal pipe sizes except as noted. Coupling bands may be any acceptable type for the pipe specified.
5. Multiple panel skirts shall have lap seams which are to be tightly joined by 3/8" galvanized rivets or bolts.
6. For 60" thru 84" diameter pipe and 77" x 52" and 83" x 57" pipe arch, the reinforced end shall be supplemented with galvanized stiffener angles of the following sizes;

   60" thru 72" diameter pipe
   (2" x 2" x 1/4" galvanized angle)

   77" x 52" and 83" x 57" pipe arch
   78" and 84" diameter pipe
   (2" x 2" x 1/4" galvanized angle)

   The above galvanized angles shall be attached by 3/8" galvanized nuts and bolts.
7. Angle reinforcement will be placed under the center panel seams on the 77" x 52" and 83" x 57" pipe arch sizes.
8. As an alternative to the connector lug and threaded rod used on 12" thru 24" culvert pipe, the attachment may be made with a 1" wide strap, 16 gage galvanized steel fastened with a 1/2" diameter, 6" long galvanized bolt and one squarehead nut.

B-7 1 of 1

05-09-97

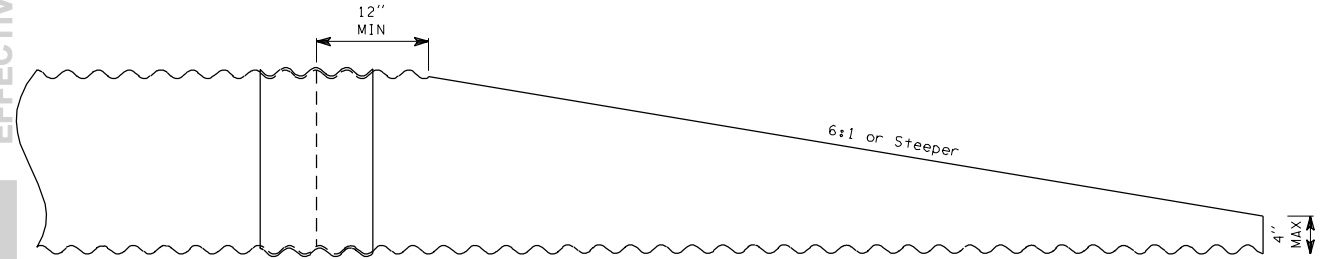

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

THERMOPLASTIC PIPE

CONCRETE PIPE

METAL PIPE

NOTES

1. The culvert ends shall be beveled to match the embankment or ditch slope, without exceeding the limits shown on this plan.

2. Field cut of culvert ends is permitted, when approved by the Engineer. All field cut culvert pipe shall be treated with treatment as shown in the Standard Specifications or General Special Provisions.

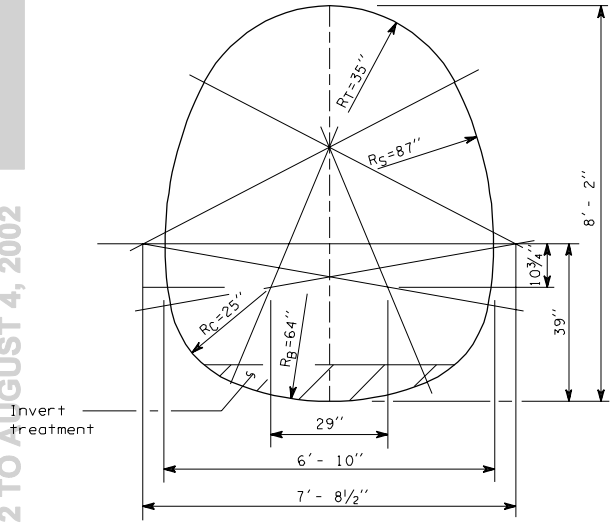

BEVELED END SECTIONS

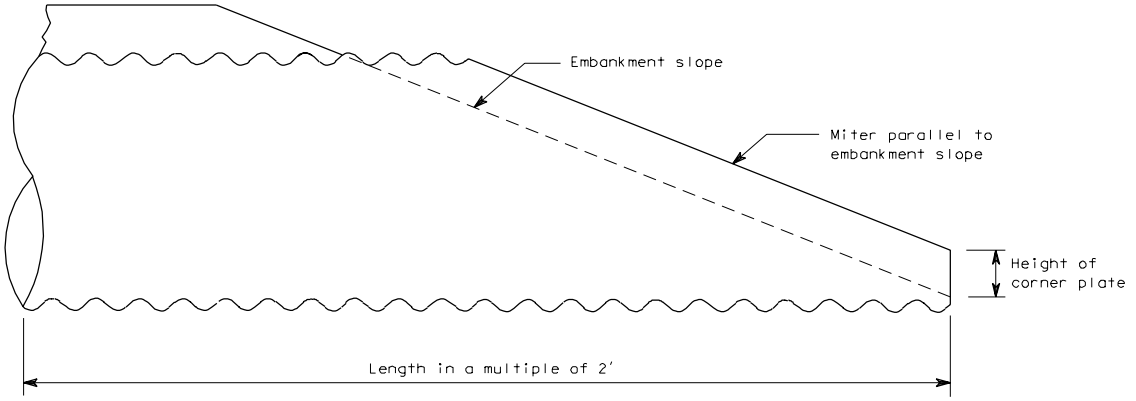

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

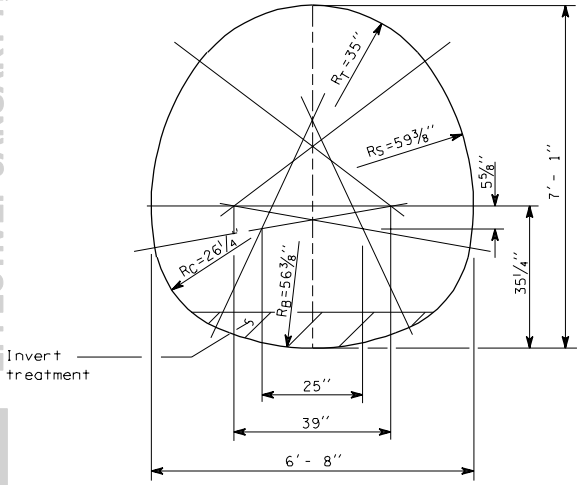

NOTES

1. Span and rise dimensions are nominal and are measured to the inside crests of corrugations.
2. Allowable heights of cover shall be within the limits indicated in the table included hereon. Minimums and maximums are shown.
3. Unless indicated otherwise a 10" depth (over the inside crests of corrugatons) of earth shall be placed in the invert of the Structural Plate Underpass, Design 1, for its full width and length. The earth shall consist of natural occurring materials available in the vicinity of the structural plate underpass installation.
4. Designed for H-20 live load and maximum allowable soil pressure of 6 Kips per square foot.

07-25-97

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

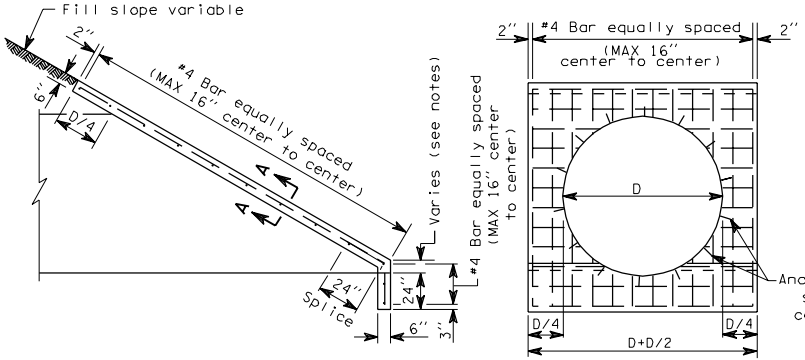

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

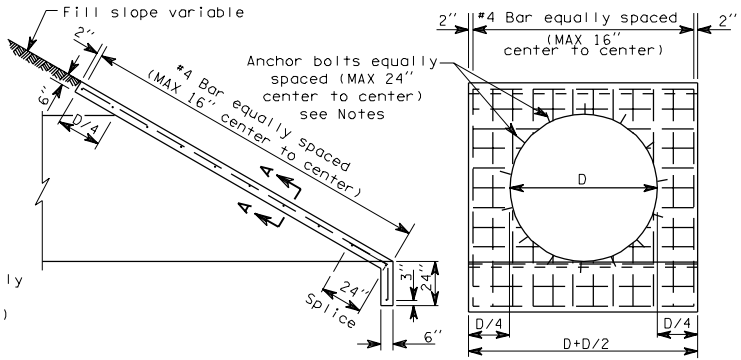

NOTES

1. The variable dimension indicated for the height of step for step mitered pipes shall conform to manufacturers recommendations unless specified differently on the plans or in the special provisions.
2. Reinforcing steel shall have 1½" clear cover to all concrete surfaces.
3. Headwalls for concrete culvert pipe may omit anchor bolt attachment.
4. When steel pipe safety bars ar used, headwall thickness shall be increased to 8".

SECTION A-A

SAFETY BAR END TREATMENT DETAIL

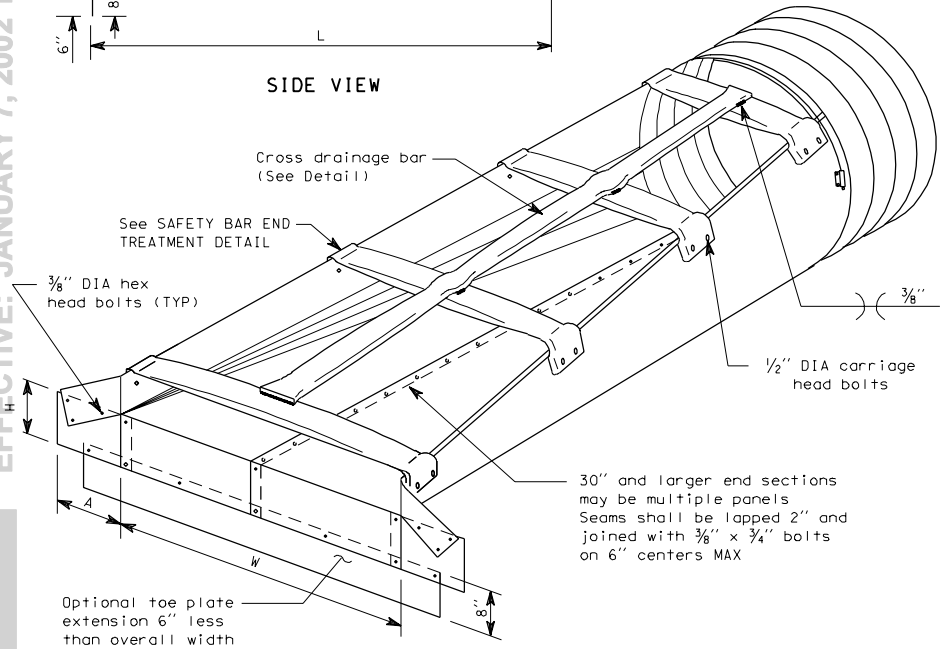

3" Galvanized pipe: flatten end, then bend outside 4" to match end section sides

CROSS DRAINAGE BAR DETAIL

SIDE VIEW

CROSS DRAINAGE STRUCTURE

NOTES

1. All pipes or pipe arches attach as shown on connector details.
2. When required, toe plate extension shall be the same gage end section. Dimensions shall be 8" high and 6" less than overall width.
3. Cross drainage bar and safety bars shall be 3" Schedule 40 galvanized steel pipe. Bars shall be placed a maximum 30" apart.
4. Slotted holes for safety bar attachment shall be provided on end sections.
5. Number of safety bars required will vary depending upon the length of the end section.

DEAD END

NOTES:

1. Contractor to provide blocking adequate to withstand full test pressure.
2. Divide thrust by safe bearing load to determine required area (in square feet) of concrete to distribute load.
3. Areas to be adjusted for other pressure conditions.
4. Provide two 1" minimum diameter rods on valves up through 10" diameter. Valves larger than 10" require special tie rod design.

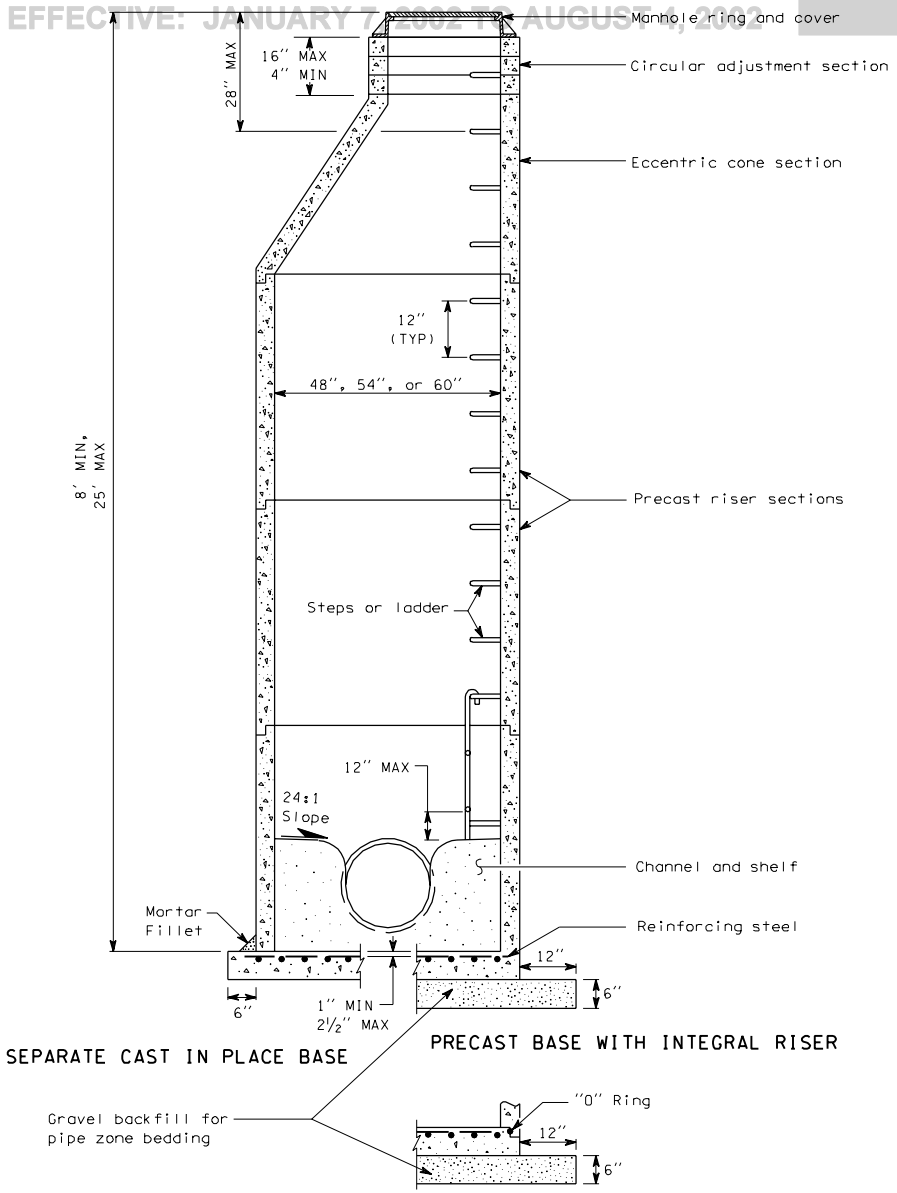

Size	Test Pressure PSI	Thrust at Fittings in Pounds				
		A	B	C	D	E
		Tee and Dead Ends	90° Bend	45° Bend	22.5° Bend	11.25° Bend
4"	250	3,140	4,440	2,405	1,225	615

FRAME AND VANED GRATE

RECTANGULAR ADJUSTMENT SECTION

PRECAST BASE SECTION

NOTES

1. As an acceptable alternate to rebar, wire mesh having a minimum area of 0.12 square inches per foot may be used. Wire mesh shall not be placed in knockouts.

2. The knockout diameter shall not be greater than 18". Knockouts shall have a wall thickness of 1½" minimum to 2" maximum.

3. Frame and grate may be installed with flange down or cast into adjustment section.

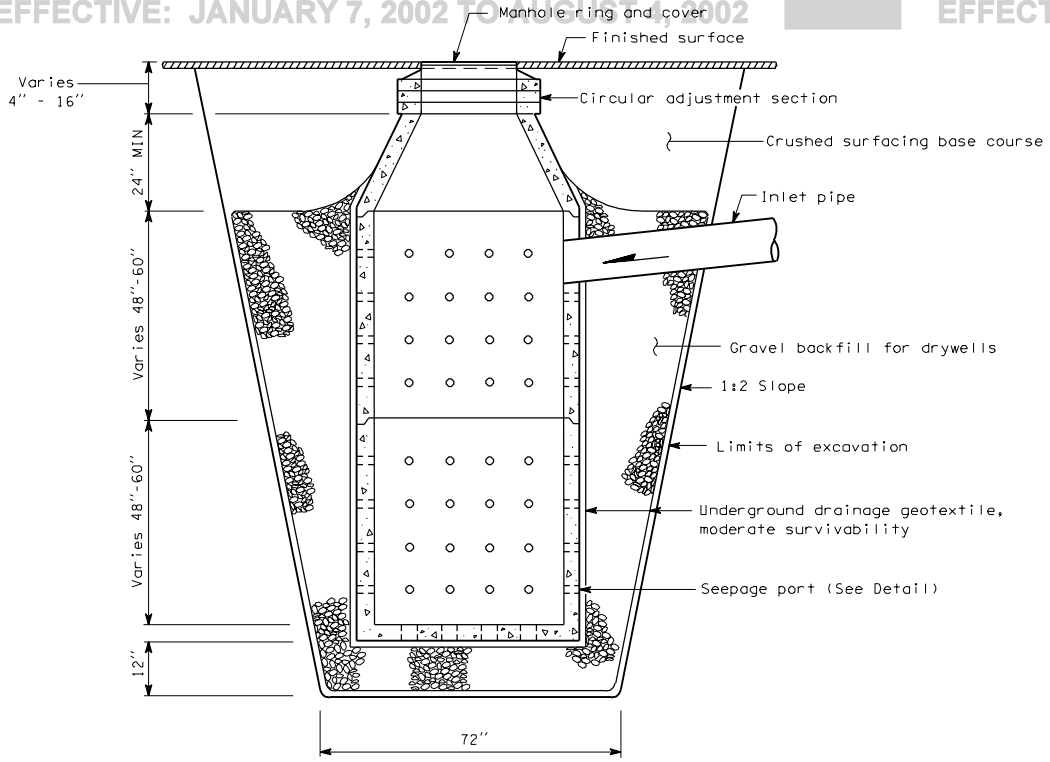

4. The precast base section may have a rounded floor and the walls may be sloped at a rate of 1:24 or steeper.

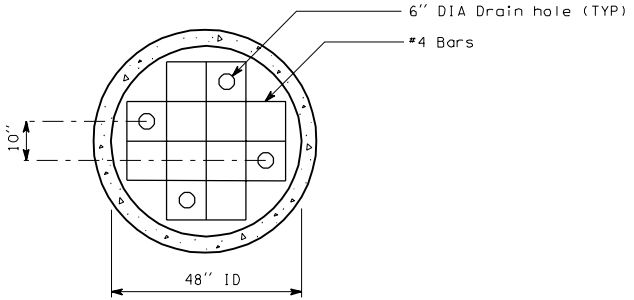

5. Opening shall be measured at the top of the precast base section.

CONCRETE COLLAR OPTION

COUPLING BAND OPTION

NOTES

1. CONCRETE COLLAR WIDTH SHALL BE ONE HALF OF THE OUTSIDE PIPE DIAMETER OF THE LARGEST PIPE. THE MINIMUM COLLAR WIDTH SHALL BE 12". CONCRETE COLLARS MAY BE USED WITH ALL PIPE MATERIALS AND DIAMETERS. THE CONCRETE COLLAR OPTION SHALL ONLY BE USED TO EXTEND EXISTING PIPES.

2. WHEN A COUPLING BAND CONNECTION REQUIRES ATTACHING A BELL END OF A CONCRETE PIPE, THE BELL END OF THE PIPE SHALL BE REMOVED BEFORE THE CONNECTION IS INSTALLED.

3. INCREASE THE OUTSIDE DIAMETER OF THE METAL PIPE TO MATCH THE OUTSIDE DIAMETER OF THE CONCRETE PIPE WITH 12" WIDE RUBBER GASKETS, THICKNESS AS REQUIRED. RUBBER GASKETS SHALL BE IN ACCORDANCE WITH SECTION 9-04.4(3) OF THE STANDARD SPECIFICATIONS.

4. USE A FLAT TYPE K COUPLING BAND. TYPE K COUPLING BANDS WITH DIMPLES ARE NOT ALLOWED FOR THE INSTALLATION DETAIL SHOWN. THE COUPLING BAND OPTION SHALL ONLY BE USED FOR EXTENDING EXISTING PIPES THAT HAVE AN INSIDE DIAMETER OF 36" OR LESS.

5. STEEL WELDED WIRE FABRIC SHALL BE IN ACCORDANCE WITH SECTION 9-07.7 OF THE STANDARD SPECIFICATIONS. INSTALL TWO WRAPS FOR SIZE 6 x 6 W1.4 x W1.4 (10 GAGE) STEEL WELDED WIRE FABRIC OR ONE WRAP FOR ANY OF THE FOLLOWING SIZES:
   - 6 x 6 W2.1 x W2.1 (8 GAGE)
   - 6 x 6 W2.9 x W2.9 (6 GAGE)
   - 4 x 4 W2.9 x W2.9 (6 GAGE)
   - 4 x 4 W4.0 x W4.0 (4 GAGE)

EXPANSION SECTION DETAIL

SNOW LOAD
RAIL WASHER

NOTES

1. When required by the contract, a Snow Load Post Washer shall be used on the backside of the post (in lieu of the 1 3/4'' post bolt washer) and a Snow Load Rail Washer shall be placed on the face side of Type 1 and Type 2 Beam Guardrail. Snow load rail washers are not to be installed on terminals.

2. Rail washers, also called "snow load rail washers" are not required on new installations, except as called for in Note 2. Rail washers need not be removed on existing installations, except posts 2 through 8 of a BCT installation.

3. Guardrail post spacing for Types 1 through 4 shall be 6'-3" on centers.

4. Timber block shall be toe-nailed to post with a 16d galvanized nail to restrict block rotation.

5. For post and block details See Standard Plan "Beam Guardrail Posts and Blocks."

6. When Beam Guardrail Type 1, __ Foot Long Post, is specified in Contract, the post length shall be stamped with numbers 1 1/2'' MIN height and 1/4'' deep at the location where the letter "H" is shown on the detail. After installation of long post, it shall be the Contractor's responsiblity to ensure that the stamped numbers are still legible and 1/4'' deep.

7. When Beam Guardrail Type 1, __ Foot Long Post, is specified, in the Contract, steel post lengths shall be increased 1'-0" for auger and backfill installation. The identification stamp of the long post shall remain as specified by the Contract.

CASE 8

NOTES

1. Attach standard wood or steel blocks to concrete structure with 5/8" expansion anchor or 5/8" threaded rod in a 1" x 8" hole grouted with epoxy.

2. For Type 3 Guardrail, terminate the rub rail by lapping it behind the first 10 x 10 post of the Type 16 Transition Section, or as approved by the Engineer.

3. The Type 10 or Type 11 Guardrail shall extend 12'-6" MIN past the structure to allow installation of the Type 16 transition for the opposing traffic.

4. If the minimum number of 12'-6" thrie beam sections required to span the structure extends more than 6'-3" (but less than 12'-6") past the structure, then a 6'-3" section of nested thrie beam should be added. Otherwise, install an additional 12'-6" section.

5. Thrie Beam Guardrail Reducer Section Type B.

6. This Type 16 Transition shall end at a 10 x 10 post. Place nested thrie beam with 10 x 10 posts at 3'-1½" MAX spacing between the end of the transition and the structure.

15'	3	25.1	1.8	37.2	2.9
16' - 23'	3	24.9	2.1	37.1	3.9
24' - 29'	4	37.4	3.1	49.7	4.9
30' - 35'	5	49.9	4.3	62.2	6.1

CASE 9

NOTES

1. L_1 and L_2 are measured along the tangent line. X_1 and X_2 are measured from the tangent line to the face of the guardrail.
2. The distance between the Type 7 anchors is measured from centerline to centerline of anchor posts.
3. The guardrail should be curved and tapered to fit. Reverse curves shall not be used.
4. Type 7 anchor required.
5. For bridge connection details, see applicable Standard Plan(s).
6. Post spacing is 6'-3" except where noted.
7. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1.
8. Within this area, the slope normal from each roadway should not be steeper than 10:1. The slope in the longitudinal direction should be approximately level.
9. The nose terminal section shall be lapped to the outside of each connecting guardrail section. All other laps shall be in the direction of traffic.
10. For Transition Type and details, see the Contract and applicable Standard Plan(s).

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

NOTES

1. SRT Terminal shown. For terminal type and details see Contract and applicable Standard Plan(s).

2. Attach standard blocks to concrete structure with ⅝" DIA expansion anchor or ⅝" DIA threaded rod in a 1" DIA x 8" hole grouted with epoxy.

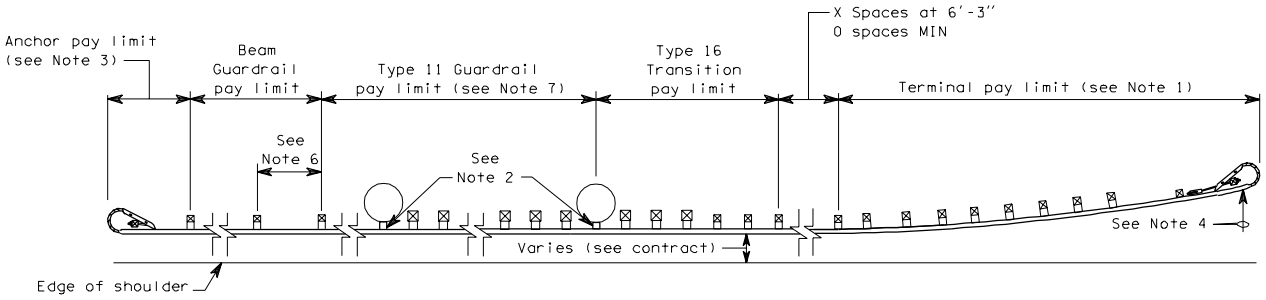

3. Type 4 anchor or Type 4 anchor (Thrie Beam) required.

4. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1 when the guardrail is within 12'-0" from the edge of the shoulder.

5. If the distance from end of Type 11 Guardrail to column/ structure exceeds 6'-3" using 12'-6" thrie beam sections, add a 6'-3" nested section of thrie beam with 10 x 10 posts, spaced at 3'-1½" (MAX), and begin transition.

6. Thrie Beam Guardrail Reducer Section Type B.

7. Guardrail post spacing for Type 11 Guardrail post the End Bridge Pier shall be at 6'-3" spacing, maximum, with 6 x 8 post and standard block.

(see Note 6)

IDENTIFICATION PLATE
(see Note 5)

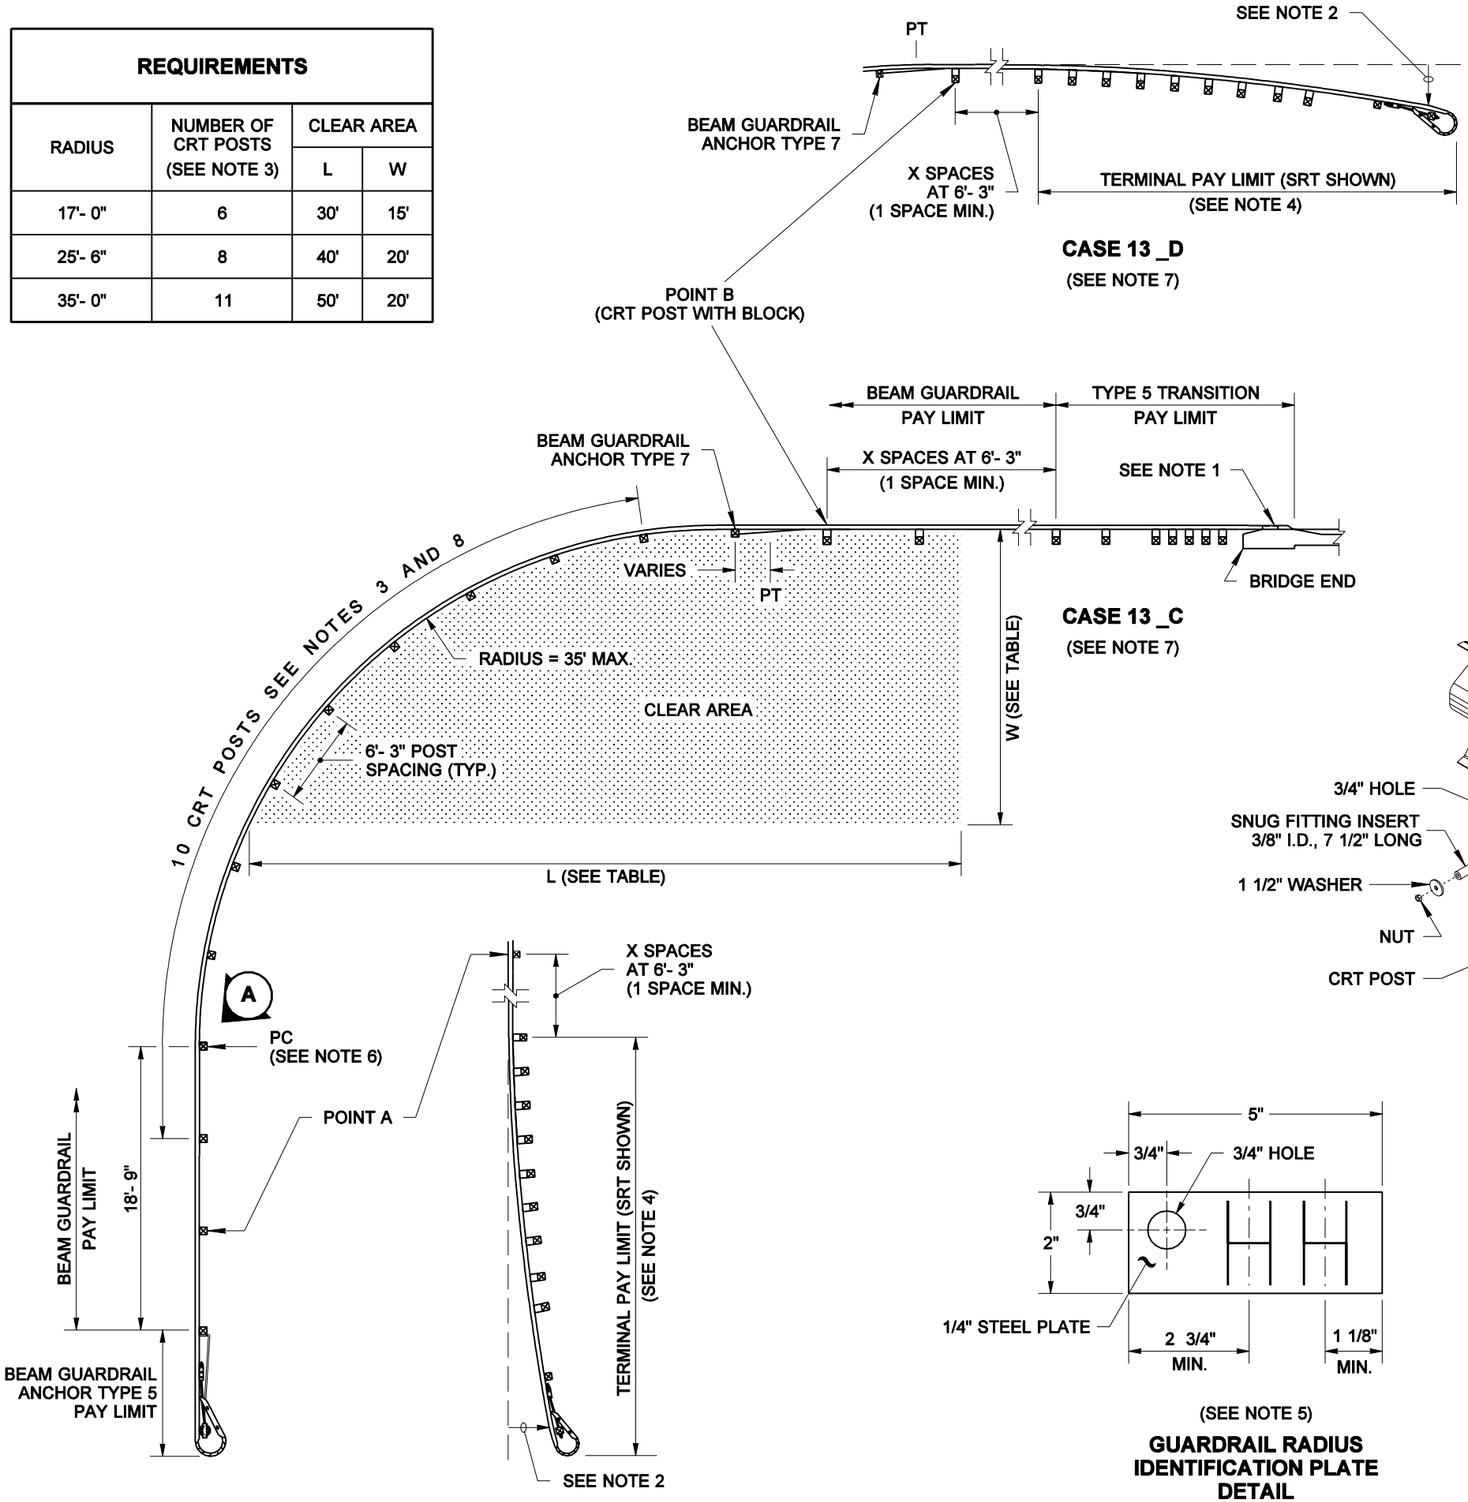

NOTES

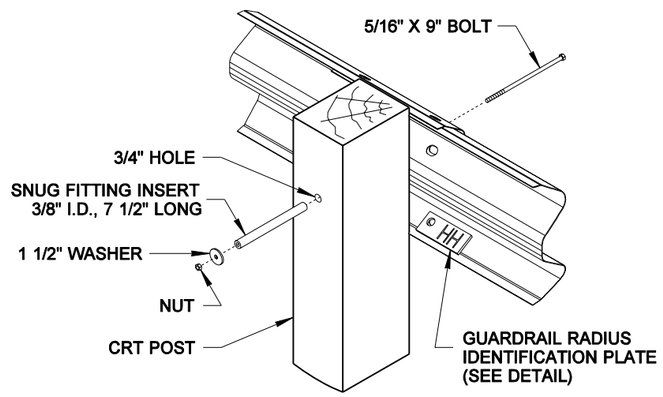

1. See Contract for guardrail connection to bridge rail and concrete barrier.
2. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1.
3. Attach to rail with ⅝" x 9" long bolt, nut and 1½" washer on back of post.
4. For terminal type and details, see Contract and applicable Standard Plan(s).
5. Radius dimensions shall be etched into plate replacing the letters "HH", shown on the Identification Plate Detail. Digits shall be 1½" MIN height and ¾" MAX width. The plate shall be galvanized after etching.
6. The guardrail radius Identification Plate shall be mounted on the back side of the Rail Element using the lowest splice bolt at the P.C. of the guardrail radius.
7. First letter of case designation placement indicates end treatment on side road. Second letter indicates end treatment on main road. For instance, a Type 5 Anchor on the side road and a bridge connection on the main road would be Case 12 AC.
8. For the 8'- 6" radius, five CRT posts are required including the CRT post at point B.
9. For CRT post details, see Standard Plan "Beam Guardrail Posts and Blocks".

GUARDRAIL PLACEMENT
WEAK POST INTERSECTION DESIGN (8'- 6" MAX RADIUS)

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002
EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

REQUIREMENTS			
RADIUS	NUMBER OF CRT POSTS (SEE NOTE 3)	CLEAR AREA	
		L	W
17'- 0"	6	30'	15'
25'- 6"	8	40'	20'
35'- 0"	11	50'	20'

NOTES

1. See Contract Plans for guardrail connection to bridge rail and concrete barrier.
2. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1.
3. Fewer CRT posts are required for smaller radii; include CRT Post at Point B. Attach guardrail to post with a 5/16" x 9" long bolt, a 3/8" I.D. x 7 1/2" snug fitting insert and a 1 1/2" washer with nut on back of post.
4. For terminal type and details, see Contract and applicable Standard Plan(s).
5. Radius dimensions shall be etched into plate replacing the letters "HH", shown on the GUARDRAIL RADIUS IDENTIFICATION PLATE DETAIL. Digits shall be 1 1/2" minimum height and 3/4" maximum width. Plate shall be galvanized after etching.
6. The guardrail radius Identification Plate shall be mounted on the back side of the rail element using the lowest splice bolt nearest the PC of the guardrail radius (See View A).
7. The first letter of the Case Designation indicates the end treatment on the side road. The second letter indicates the end treatment on the main road. For example, a Type 5 Anchor on the side road with a bridge connection on the main road would be Case 13 AC, the combination shown.
8. For CRT post details, see Standard Plan C-1b.

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

NOTES

1. Unless otherwise indicated in the contract, the SRT - 350 (12.5, 8 Post) as manufactured by Trinity Industries, Inc, or a FLEAT 350 as manufactured by Road Systems Inc, shall be installed per manufacturer's recommendations. If specified in the Contract, the FLEAT TL2 as manufactured by Road Systems, Inc. shall be installed per manufacturers recommendations.

2. Where terminal is placed on a curve, and post offsets would result in the rail encroaching onto the shoulder (e.g., the inside of a curve), the posts shall be installed so that the face of the rail is at the edge of the shoulder.

3. When snow load post washers and snow load rail washers are called for in the contract, the snow load rail washers must be omitted within the terminal limits.

4. Offset distances:
   FLEAT 350 - 4'-0"
   FLEAT TL2 - 1'-8" (MIN)

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

PLAN

TYPE 5 ANCHOR

NOTES

1. Attach W-beam to steel pipe with ⅝" x 1¼" button head bolt with no washer. No connection to the post is required.
2. For end section details see Standard Plan, "Beam Guardrail End Sections".
3. For details see Standard Plan, "Beam Guardrail Anchor Type 1".
4. For details see Standard Plan, "Beam Guardrail Posts".
5. Outside nut shall be torqued against inside nut a minimum of 100 ft/lbs.

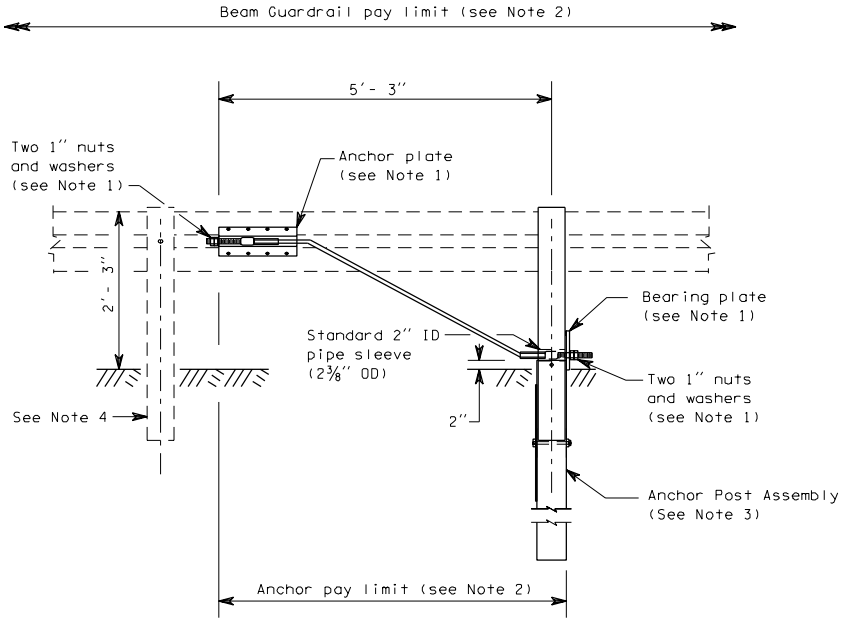

DETAIL B

BEAM GUARDRAIL ANCHOR TYPE 5

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002
EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

TYPE 7 ANCHOR

NOTES

1. For details, see Standard Plan, "Beam Guardrail Anchor Type 1".

2. The rail element is to be included in the "Beam Guardrail" pay item. The "Anchor" pay item includes the anchor post, anchor plate, anchor cable, bearing plate, nuts and washers.

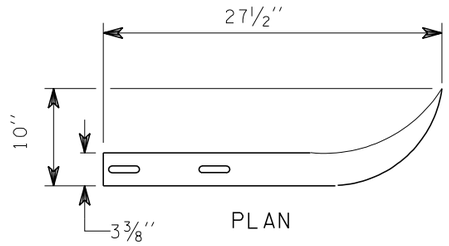

3. For details, see Standard Plan, "Beam Guardrail Posts and Blocks".

4. Post shall match beam guardrail posts.

PLAN

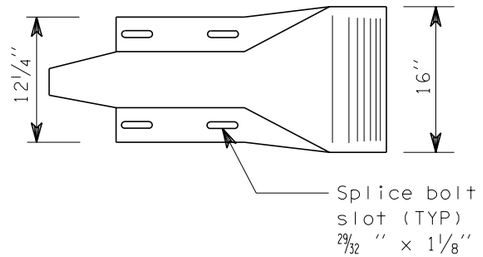

ELEVATION

DESIGN A

PLAN

ELEVATION

DESIGN C

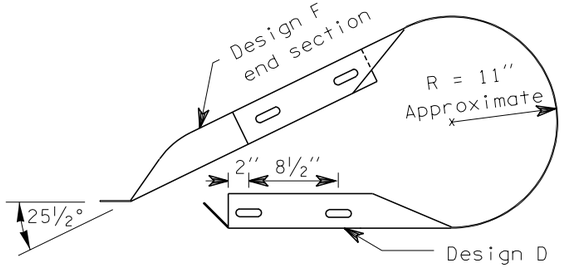

NOTES

1. End Section Design G shall be used except where noted on the plans or contract.

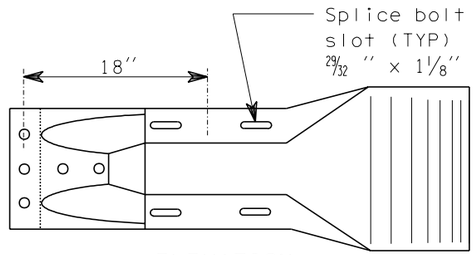

2. Bolts shall be ⅞'' ASHTO M 164 chemically bonded anchors. Anchor installation shall be per manufacturer's recommendations, in dry conditions.

3. A single piece having similar dimensional shape to Design G and mating with the W-beam guardrail is an alternate.

4. In cases where Design "F" end section is lapped on the outside of the guardrail, a galvanized 1'' ID, 2'' OD, 0.134'' thick, narrow Type A Plain Washer or a anchor rail washer shall be placed under the splice bolt heads.

TYPE 3 ANCHOR

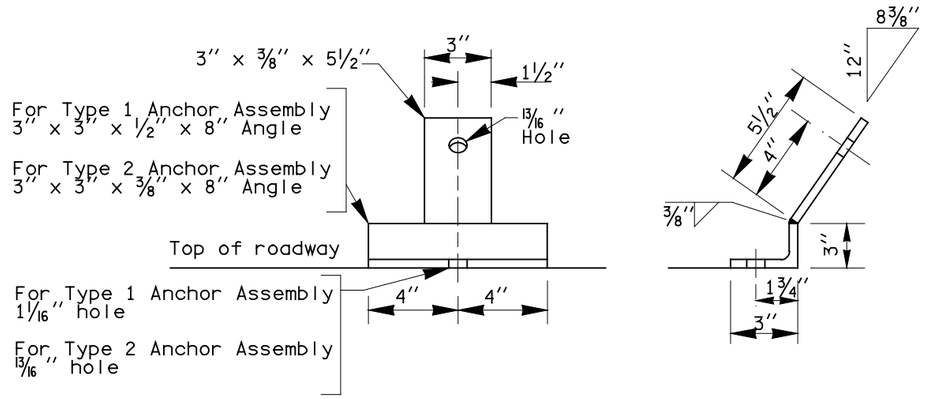

PLAN - TYPE 3 ANCHOR LOCATIONS

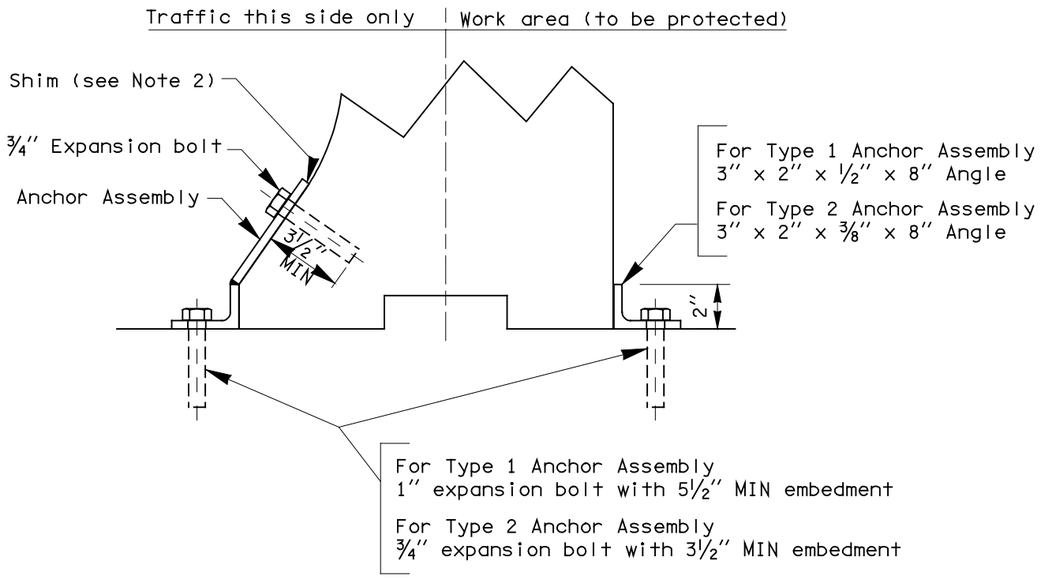

Shown for two-way traffic, four anchors required.
For one-way traffic, install two anchors on traffic side of barrier.

NOTES

1. After removing temporary barrier from structures, clean and fill deck bolt holes with a 2:1 sand/cement grout, by volume.
2. Shims may be required to fit the bracket to the median barrier and roadway surface.
3. Location of anchors is to be adjusted to miss the main reinforcing in the deck when drilling holes.
4. For Type 1 Anchor Assembly provide two assemblies for each section of concrete median barrier on the roadway surface, located approximately 2'-6" from barrier ends.
5. For Type 2 Anchor Assembly provide three assemblies for each section of concrete median barrier on the roadway surface, located approximately 2'-6" from barrier ends and at center of barrier.

NOTES

1. Stagger Spring Cable End assemblies for clearance between units. Installation of cable end assemblies shall be as follows:

   LENGTH OF CABLE RUNS:

   Up to 500′ - Use the Spring Cable End Assembly on one end, and turnbuckle only on the other end of each cable.

   Over 500′ to 2000′ - Use the Spring Cable End Assembly on each end of each cable.

2. See Standard Plan C-11a for post spacing.

3. Distance from tangent of barrier run to notch for top cable on breakaway anchor angle shall be 4′.

4. The distance from the top of the footing to top of the highest cable is:

   27″ for TYPE 1 Cable Barrier,
   30″ for TYPE 2 and TYPE 3 Cable Barrier.

5. Where the cable is connected to a cable socket with a wedge type connector, one wire of the wire rope shall be crimped over the base of the wedge to hold it firmly in place.

NOTES

1. All concrete including traffic barrier shall be Class 4000 except as noted.
2. For backfill requirements, see Standard Plan "D-4".
3. When Wall Type 1-SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 1-SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by 0.003 x H CY/LF.
5. If Bar W1 interferes with the retaining wall form, it shall be field bent only at the angle point. The bar shall not be twisted.
6. Toe height for traffic barrier may vary, 2" MIN to 6" MAX.
7. Height of traffic barrier may vary if required to provide a profile pleasing to the eye.
8. Concrete in the 24 foot wall sections shall be placed separately between expansion joints with a minimum 12 hour period between concrete placement.

NOTES

1. All concrete including traffic barrier shall be Class 4000 except as noted.
2. For backfill requirements, see Standard Plan "D-4".
3. When Type 2-SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. If concrete is "SW", the Material Quantity in the table shall be increased by 0.003 x H CY/LF.
5. If Bar W1 interferes with the retaining wall form, it shall be field bent only at the angle point. Twisting of the bar will not be permitted.
6. Toe height may vary 2" MIN to 6" MAX.
7. Height may vary if required to provide a profile pleasing to the eye.
8. Concrete in the 24 foot wall sections shall be placed separately between expansion joints with a minimum 12 hour period between concrete placement.

KEY DETAIL

NOTES

1. All concrete shall be Class 4000 except as noted.
2. For backfill requirements, see Standard Plan "D-4".
3. When Wall Type 4-SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 4-SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by 0.003 x H CY/LF.
5. Concrete in the 24 foot wall sections shall be placed separately between expansion joints with a minimum 12 hour period between concrete placement.

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

GUTTER DETAIL

WALL TOP DETAIL

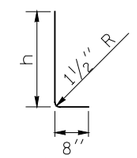

KEY DETAIL

Not required on walls H = 5' thru H = 25'

NOTES

1. All concrete shall be Class 4000 except as noted.
2. For backfill requirements, see Standard Plan "D-4".
3. When Wall Type 5-SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 5-SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by 0.003 x H CY/LF.
5. Concrete in the 24 foot wall sections shall be placed separately between expansion joints with a minimum 12 hour period between concrete placement.

NOTES

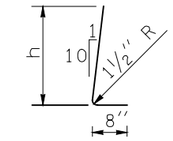

1. All concrete shall be Class 4000 except as noted.
2. For backfill requirements, see Standard Plan "D-4".
3. When Wall Type 6-SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 6-SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by 0.003 x H CY/LF.
5. Concrete in the 24 foot wall sections shall be placed separately between expansion joints with a minimum 12 hour period between concrete placement.

NOTES

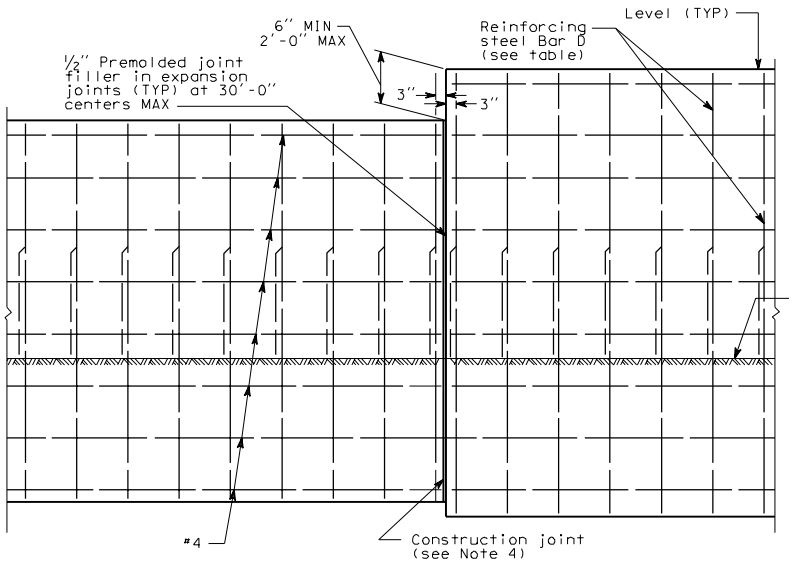

1. Wall to be designated Noise Barrier Type 1A, 1B, 1C or 1D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. Panels shall have at least 3 feet of level ground on each side.
4. Construction joints in the footing shall be spaced at 120 feet maximum.
5. The Contract specifies actual foundation requirements D1 or D2.

NOTES

1. Wall to be designated Noise Wall Type 13A, 13B, 13C or 13D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. Panels shall have at least 3 feet of level ground on each side.
4. Construction joints in the footing shall be spaced at 120 feet maximum.
5. All joints shall be in full contact and sealed.
6. The Contract specifies actual foundation requirements D1 or D2.

NOTES

1. Wall to be designated Noise Barrier Type 16A, 16B, 16C or 16D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. All masonry shall be hollow unit and installed as running bond.
4. All masonry is to be specially inspected.
5. All Concrete Masonry Unit (CMU) cells that have vertical steel reinforcing bars or bond beam units shall be filled with grout.
6. Panels shall have at least 3 feet of level ground on each side.
7. Construction joints in the footing shall be spaced at 120 feet maximum.
8. See "Masonry Wall Finishes and Details" sheet for masonry block finishes, special shapes, sizes and layouts.

NOTES

1. Wall to be designated Noise Barrier Type 18A, 18B, 18C or 18D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. All masonry shall be hollow unit and installed as running bond.
4. All masonry is to be specially inspected.
5. All Concrete Masonry Unit (CMU) cells that have vertical steel reinforcing bars or bond beam units shall be filled with grout.
6. Panels shall have at least 3 feet of level ground on each side.
7. Construction joints in the footing shall be spaced at 120 feet maximum.
8. See "Masonry Wall Finishes and Details" sheets for masonry block finishes, special shapes, sizes and layout.

SECTION A-A

NOTES

1. Dimensions and notations for superstructure are typical for both single lane and two lane bridges.
2. All timber and lumber shall be #2 or better and untreated Douglas fir-larch.
3. All piling shall be untreated Douglas fir and shall be driven to develop a minimum load bearing capacity of 15 tons.
4. Blocking for frame bents shall be proportioned to carry a minimum load of 15 tons per post.
5. All hardware shall be black, ungalvanized.
6. Each deck plank shall be nailed to each stringer with two 7" spikes, number 1 or larger.
7. On 17'spans, stringers shall be 6x16 S1E. On 15' spans, stringers shall be 5x16 S1E. Two-lane bridges shall use thirteen lines of stringers, one-lane bridges shall use seven lines of stringers.
8. Overlay thickness must be sufficient to cover bolts.

OPTIONAL APPROACH - HALF ISOMETRIC

SECTION H-H

SECTION G-G

APPROACH PLAN

NOTES

1. A minimum 3′ wide accessible route shall be maintained in all pedestrian accessible areas.
2. Contraction joints shall be placed along sidewalks at 15′ maximum spacing. All joints shall be cleaned and edged.
3. Inlets shall be located so that runoff does not flow past curb ramps.
4. This area may also incorporate the following;
   Decorative paving,
   Open graded paving,
   Raised or leveled planters,
   Benches or seating areas.
5. Curb ramps shall be poured as a separate unit from the sidewalk, isolated by expansion joint material on all sides except at end of ramp next to the roadway.
6. Minimum landing width is 4′ for new construction. For alterations, the minimum is 3′. See Contract Plans.
7. Ramp texturing is to be done with an expanded metal grate placed and removed from wet concrete to leave a diamond pattern as shown. The long axis of the diamond pattern shall be perpendicular to the curb. Grooves shall be 1/8″ deep and 1/4″ wide.
8. See Contract Plans for mounting height of Sign R7-801.
9. Cement concrete approaches shall be constructed of air-entrained concrete Class 3000 and may be poured integral with curb.
10. When a flush condition is not feasible, the change in elevation between surfaces shall not exceed 1/2″. The edge of the higher surface, up to 1/4″ in height, may be vertical. The edge of the higher surface, up to 1/2″ in height, shall be beveled with a slope no steeper that 2:1.

NOTES

1. Horizontal and vertical clearance requirments shall be as shown in Contract Plans.
2. Assemble with ⅞'' Diameter bolts. Install bolts with head upward. Exclude bolt threading from grip.
3. Details not shown are same as Chord to End Post Connection Type R, omitting the ¾'' plate stiffener on the tee member.
4. Ends of diagonals shall be cut to fit neatly against chord or post. Fillet weld size to be diagonal tube or pipe thickness plus 1/16''.
5. Horizontal diagonals must join chords where vertical diagonals connect (panel points).
6. Interior diagonals shall be placed at panel points, 40' maximum spacing. Locate symmetrically about centerline of span if possible. An interior diagonal is not required at span ends.
7. Omit gussets or shims where interior diagonals are not required at chord field splice.
8. Dimension shall equal chord thickness or ¼'', whichever is less.
9. No post splices permitted in lower third of height, nor closer than 3'-0'' to bottom of chord. No chord shop splices permitted in middle third of span. Maximum of one splice in each end post.
10. If transformer is required, support by bracket attached to bottom of ballast box.
11. Drill hole in chord at each diagonal and strut. Diameter shall be 1'' for spans over 60'. For spans 60' or less, diameter shall be ¾''.

NOTES

1. Vertical and horizontal clearance requirements shall be as shown on the contract plans.
2. No post splices permitted in lower third of height, nor closer than 3'-0" to bottom chord. No chord shop splices permitted in first two-thirds of the span. Only one splice permitted in post. For post or chord shop splice details, see Standard Plan "Sign Bridge".
3. All bolt holes shall be drilled, and the diameter shall be 1/16" larger than the nominal bolt diameter except as noted.

ELEVATION

NOTES

1. Mileposts of the type specified shall be placed as shown hereon. If conditions preclude placement at the correct location, the mileposts may be moved as much as 50' in either direction; mileposts that cannot be placed within this degree of accuracy shall be omitted entirely.
2. Mileage for mileposts shall commence at the south or west terminus of the highway route and progress in a north or east direction.
3. All Spur and Equation signs shall have "S" and "B" plaques.
4. Mileposts in cut sections shall be placed at back of ditch. Milepost markers may be placed up to 30' from the edge of the traveled way.
5. See "Washington State Sign Fabrication Manual" for the dimensions and colors of the Milepost/Plaque.

GUIDE POST TYPES	
Type	Reflective Sheeting
W	White sheeting facing traffic
Y	Yellow sheeting facing traffic
WW	White sheeting both sides
YY	Yellow sheeting both sides
WR	White facing traffic, red on opposite side
YR	Yellow facing traffic, red on opposite side
G	Type WW with 3″ x ⅜″ green sheeting below each white sheet

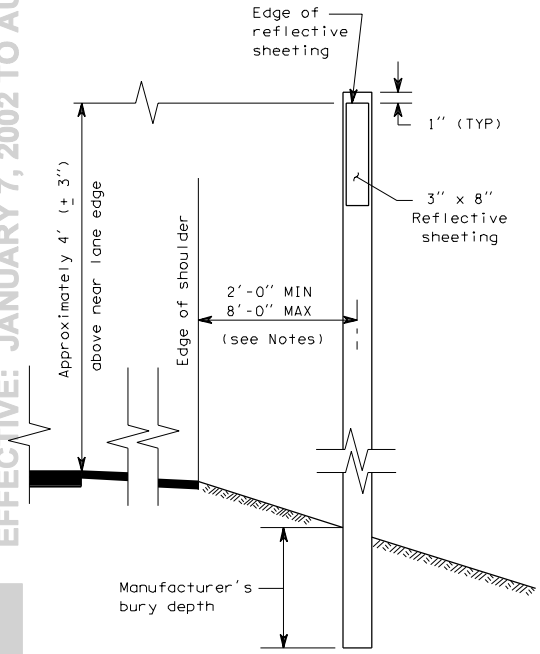

NOTES

1. The contractor shall either:
   a: drive the flexible guide post in line with the guardrail posts, or
   b: install the shorter flexible guide post on the guardrail post.

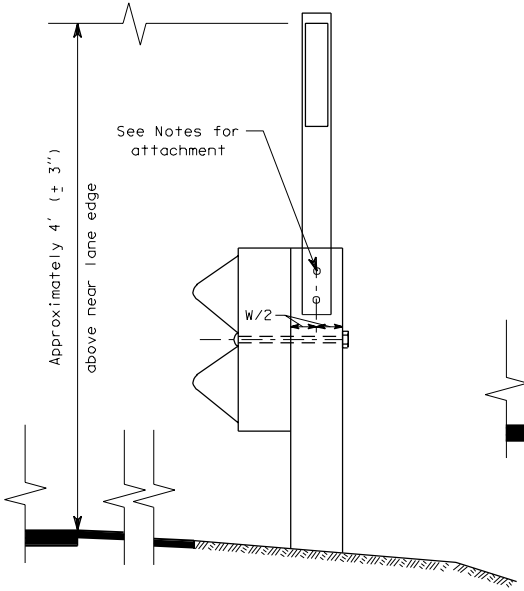

2. Guardrail-mounted guide posts shall be fastened to the guardrail post with two 20d galvanized nails, or two 2″ x ⅜″ lag screws with washers, as near to the centerline of the post as possible. Also acceptable is any approved method submitted by the guide post manufacturer.

3. Guide posts shall be 2′ from the edge of shoulder unless otherwise specified.

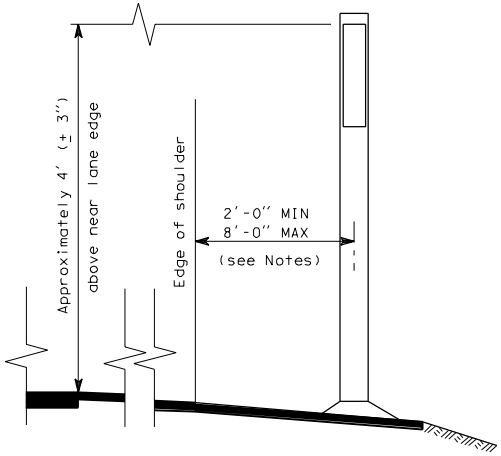

4. Flexible tubular posts shall have a band of reflective sheeting near the tops of the post, at least 8″ wide, around the entire post.

TYPICAL SECTION
ASCENDING GROUND

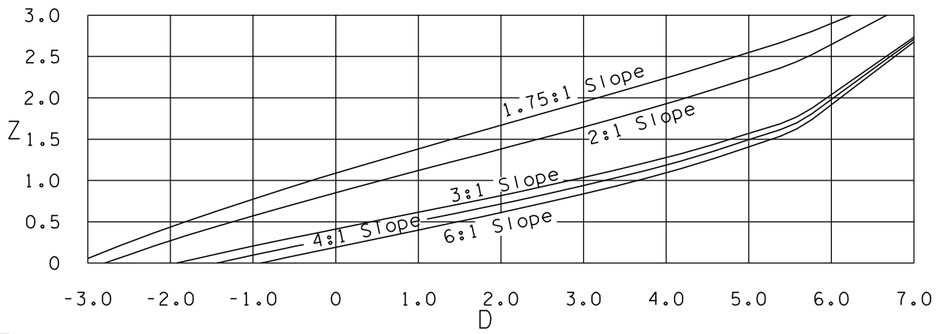

TYPICAL SECTION
DESCENDING GROUND

TREATMENT IN SHALLOW CUTS
See Note 3

VALUES OF Z (feet)
For Class A Slope Treatment

$$Z = \frac{\frac{K}{2}\sqrt{\left(\frac{J}{2}\right)^2 - \left(\frac{D}{2}\right)^2} \pm \left(\frac{DKS}{4}\right)}{\frac{KS}{2} + \left(\sqrt{1+S^2}\right)\left(\sqrt{\left(\frac{J}{2}\right)^2 - \left(\frac{D}{2}\right)^2}\right)}$$

In this equation the term ±DKS/4 is positive when the slope treatment stake is lower than the slope stake (descending ground); and negative when the slope treatment stake is higher than the slope stake (ascending ground).

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

NOTES

1. Slope treatment shall be constructed simultaneously with the roadway excavation. Ordinarily hand trimming will not be required if satisfactory results are obtained with mechanical equipment.
2. It is essential that the construction of cut and fill slopes and the application of slope treatment fit as naturally as possible into the existing landscape to provide an aesthetically and geometrically satisfactory completed roadway.
3. When the distance K is greater than the distance from the top of cut to the bottom of ditch, slope treatment shall begin at bottom of ditch.

LEGEND:

J Distance from slope stake to slope treatment stake, measured on natural ground slope.

K Distance from slope stake to lower limit of slope treatment, measured down face of cut slope.

H Difference in elevation between finished shoulder grade and slope stake.

D Difference in elevation between slope stake and slope treatment stake.

Z Depth of slope treatment at slope stake as determined by a straight line between the midpoints of J and K.

S Horizontal distance per foot cut for the slope under consideration. (For a 3:1 slope, S=3)

CUT SLOPE	Class A		Class B
	J	K	J and K
4:1	7′	5′	5′
3:1	7′	5′	5′
2:1	7′	9′	5′
1.75:1	7′	12′	5′

STEEL POST ASSEMBLY DETAIL

NOTES:

1. An alternate platform may be installed, provided that it is compatible with the bracket shown.
2. A Type 2 Support is required for installing multiple mailboxes on one support. No more than 5 mailboxes are allowed on a Type 2 support.
3. Attach a newspaper box to a steel post with two 1 7/8" Muffler Clamps spaced 4" apart. Field drill 7/16" holes in the newspaper box to fit. Use 2 1/2" x 1/4" lag bolts to attach newspaper boxes to wood posts. Newspaper boxes must not extend beyond the front of the mailbox when the mailbox door is closed.
4. Spacing of mailbox mounting holes varies among manufacturers. Attachment of the mailbox to the platform may require drilling additional holes through the mailbox to fit the platform.
5. Center the mailbox on the platform to ensure space for the mailbox door to open and to allow space for installing the fasteners.

LIGHTING BRACKET DETAIL

For light standards with single arm 12′ or less and double arms 8′ or less mounted on bridges or retaining walls.

NOTES

1. See Standard Plan C-8b for base plate and foundation requirements when light standards are mounted on concrete barrier.
2. Round and smooth all edges along wire-way to protect conductors. See Standard Plan J-1e for wiring details.
3. The top of the anchor rod shall be both threaded and galvanized a minimum of 12″. The bottom of the anchor rod shall be threaded a minimum of 3″. Galvanizing shall be in accordance with AASHTO M111 after threading. Hooked anchor bolts are not allowed.
4. Strap templates shall be held in place by nuts 6″ from the top of the foundation, and at bottom of anchor bolts resting on 4″ x 3/8″ square washers.
5. Pole base plate for a slip base design shall be 1 1/4″ AASHTO M223 Gr. 345. Pole base plate for a fixed base design may be either 1 1/4″ AASHTO M223 Gr. 345 or 1 1/2″ AASHTO M183.
6. Installation of a 50′ pole with double mast arms on a slip base is not allowed.

HIGH MAST TIMBER
LUMINAIRE SUPPORT

Shown for 480 VAC power feed.
Increase conductor and fuse size
as required for 240 VAC power feed.

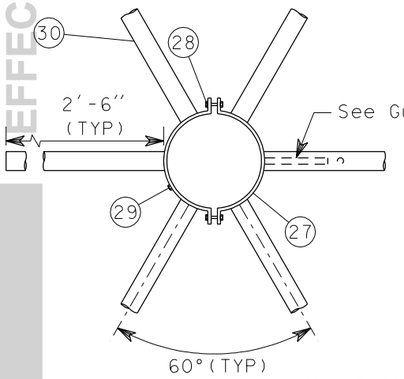

KEY

(1) Galvanized steel mast arm - configuration varies with manufacturer
(2) Luminaire - see Contract for type and number
(3) Mounting height - roadway to luminaire elevation difference ± 2%, see Contract
(4) Mast arm length - see Contract
(5) 5⁄8″ galvanized thimble eyebolt (single or double) with washers and nuts or eyenut
(6) Bonding jumper
(7) Pole and bracket cable
(8) Equipment grounding conductor see Standard Plan J-9a.
(9) From ground line to 10′ above ground, enclose equipment grounding conductor in galvanized steel conduit, code sized. Above 10′ from ground, staple equipment grounding conductor to pole. Connect to supplemental ground per Standard Plan J-9a.
(10) Service wedge clamp
(11) ACSR triplex or fourplex conductors - see Contract
(12) Copper split bolt connector
(13) Messenger cable
(14) Insulating tape for waterproof connection
(15) Fused quick disconnect - use 30 amp fuses for high mast supports
(16) Weatherhead - size as required
(17) Steel conduit
(18) 8″ x 8″ x 4″ NEMA 3R junction box with raintight hubs and removable cover
(19) Grounding lug
(20) 12 pole terminal block
(21) Direct burial conductors or galvanized steel conduits with conductors - see Contract
(22) Grounding bushing
(23) Supplemental ground - see Standard Plan J-9a.
(24) Class 5 timber pole - length sufficient for mounting height and burial depth
(25) Class 2 timber pole - length sufficient for mounting height and burial depth.
(26) 5⁄8″ x 9″ step bolt
(27) 1⁄4″ x 10″ plate collar bent to fit pole diameter (8″ - 10″)
(28) 3⁄8″ x 4″ machine bolts (four required) with washers and nuts
(29) 1⁄2″ lag bolts (six required) - drill 9⁄16″ hole in plate
(30) 2″ pipe
(31) 3⁄4″ wire hole 2″ from gusset plate, smooth hole edges
(32) 1″ nonmetallic conduit with 3⁄4″ straps at code spacing
(33) Distance varies, 35′ MIN, 50′ MAX, depending on line clearance requirements

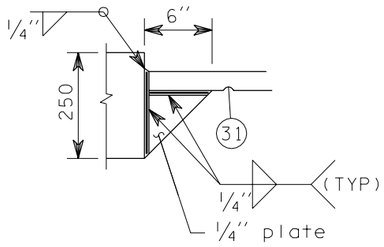

NOTES:
1. Timber luminaire supports are allowed only for temporary installations where breakaway or slip bases are not required.
2. When down guys are required, See Standard Plan J-7d.

CABINET DETAIL

KEY

① METER BASE PER SERVING UTILITY REQUIREMENTS. (WITH MANUAL BYPASS LEVER)

② MAIN BREAKER (SEE BREAKER SCHEDULE)

③ PHOTOCELL BREAKER (SPST 15 AMP - 125 VOLT)

④ TEST SWITCH (SPST 10 AMP - 125 VOLT 'T' RATED)

⑤ PHOTO ELECTRIC CONTROL, STD. SPEC. 9 - 29.11(2)

⑥ BRANCH BREAKER (SEE BREAKER SCHEDULE)

⑦ SIGNAL BREAKER (SEE BREAKER SCHEDULE)

⑧ CONTACTOR (SEE BREAKER SCHEDULE)

⑨ RECEPTACLE BREAKER (20 AMP - 125 VOLT)

⑩ RECEPTACLE, GROUNDED (20 AMP - 120 VOLT)

⑪ HEATER BREAKER (SPST 15 AMP - 125 VOLT)

⑫ THERMOSTAT, 40°F CLOSURE - 3 DIFFERENTIAL

⑬ STRIP HEATER (100 WATT NOMINAL), WITH TERMINAL STRIP COVER

⑭ NEUTRAL BUSS, 10 LUG COPPER

⑮ PHOTOCELL ENCLOSURE - ENCLOSURE TO BE FABRICATED FROM 5/8'' EXPANDED STEEL MESH WITH WELDED SEAMS AND MOUNTING FLANGES. HOT DIP AFTER FABRICATION. SEE PHOTOCELL ENCLOSURE MOUNTING DETAIL, STANDARD PLAN J-3b.

⑯ SCREENED VENTS, 2 REQUIRED, 1EACH SIDE, LOUVERED PLATES.

⑰ HINGED FRONT FACING DOOR WITH 6''x 6'' MIN POLISHED WIRE GLASS WINDOW

⑱ HINGED DEAD FRONT WITH 1/4 TURN FASTENERS

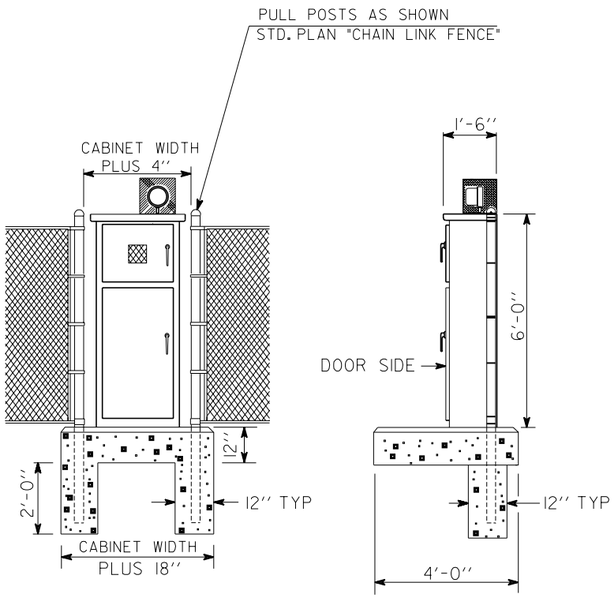

⑲ 6'' x 6'' MIN UNDERGROUND FEED - SERVICE WIREWAY (LEFT REAR CORNER)

⑳ REMOVABLE EQUIPMENT MOUNTING PAN

㉑ METAL WIRING DIAGRAM HOLDER

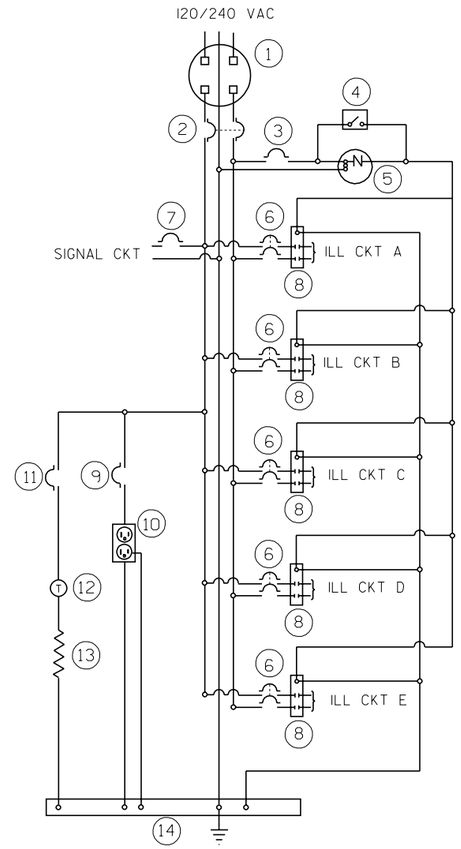

GENERAL NOTES

1. SEE DIVISION 9, SERVICE CABINETS, IN THE STANDARD SPECIFICATIONS.
2. HINGES SHALL HAVE STAINLESS STEEL PINS.
3. CABINETS SHALL BE RATED NEMA 3R AND SHALL INCLUDE TWO RAIN TIGHT VENTS.
4. EACH DOOR SHALL BE PADLOCKABLE AND AND GASKETED. INSTALL BEST CX CONSTRUCTION CORE ON BOTTOM DOORS. SEE DOOR HINGE DETAIL, STANDARD PLAN J-3b.
5. THE FOLLOWING EQUIPMENT WITHIN THE SERVICE ENCLOSURE SHALL HAVE AN APPROPRIATELY ENGRAVED PHENOLIC NAME PLATE (ATTACHED WITH SCREWS OR RIVETS.) KEY NUMBERS 2, 3, 4, 6, 7, 8, 9 AND 11.
6. METERING ARRANGEMENTS VARY WITH DIFFERENT SERVING UTILITIES. THE UTILITY MAY REQUIRE METER BASE MOUNTING IN THE ENCLOSURE, ON THE SIDE OR ON THE BACK OF THE ENCLOSURE. THE CONTRACTOR SHALL VERIFY THE SERVING UTILITY'S REQUIREMENTS PRIOR TO INSTALLING THE SERVICE EQUIPMENT.
7. DIMENSIONS SHOWN ARE NOMINAL AND SHALL BE ADJUSTED TO ACCOMMODATE THE VARIOUS SIZES OF EQUIPMENT INSTALLED BY THE CONTRACTOR.
8. ALL BUSSWORK SHALL BE HIGH GRADE COPPER AND SHALL EQUAL OR EXCEED THE MAIN BREAKER RATING. ALL BREAKERS SHALL BOLT ONTO THE BUSSWORK. JUMPERING OF BREAKERS SHALL NOT BE ALLOWED.
9. THE PHOTOCELL UNIT SHALL BE CENTERED IN THE PHOTOCELL ENCLOSURE TO PERMIT 360 DEGREE ROTATTION OF THE PHOTOCELL WITHOUT REMOVAL OF THE PHOTOCELL UNIT OR THE PHOTOCELL ENCLOSURE.
10. ALL INTERNAL WIRE RUNS SHALL BE IDENTIFIED WITH "TO - FROM" CODED TAGS LABELLED WITH THE CODE LETTERS AND/OR. NUMBERS SHOWN ON THE SCHEDULES. APPROVED PVC WIRE MARKING SLEEVES SHALL SHALL BE USED.
11. THE PHOTOCELL CIRCUIT SHALL BE INSTALLED IN FLEX CONDUIT WITHIN THE METER COMPARTMENT.
12. ALL NUTS, BOLTS AND WASHERS USED FOR MOUNTING THE PHOTOCELL ENCLOSURE SHALL BE STAINLESS STEEL.
13. A 1% TOLERANCE IS ALLOWED ON ALL DIMENSIONS.

NOTE INSTALL FOUNDATION AS SLAB SECTION UNLESS IDENTIFIED FOR CONSTRUCTION IN FENCE LINE IN CONTRACT PLANS.

TYPE 2

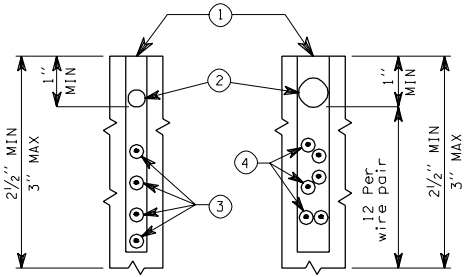

TYPICAL CORNER SAWCUT

LOOP SAWCUT DETAILS

TYPE 1 TYPE 2

LOOP WINDING DETAILS

SECTION A-A SECTION B-B

1. Sealant
2. Twisted polypropylene rope (Sized for snug fit)
3. Loop wire - number varies (See Loop Winding Details)
4. Lead-in wires: One pair for each loop served, three pairs maximum per sawcut (See installation notes)
5. Extend sawcut sufficient length to provide full sawcut depth around corners

LOOP INSTALLATION NOTES

1. Install junction box and lead-in conduit.
2. Saw loop slots and lead-in slots.
3. Lay out loop wire begining at junction box, allowing 5' minimum slack.
4. Install wire in loop slot. See Loop Winding Detail.
5. Return to junction box and identify leads with plan detector number and "S" for start and "F" for finish.
6. Twist each pair of lead-in wires two turns per foot from loop to junction box and install in lead-in slot and conduit. Reverse direction of twist for each successive pair installed.
7. Construct supplemental splice containing any series or parallel loop connections required in plans. Supplemental splices are subject to the same requirements shown for the loop lead and shielded cable splice.
8. Splice loop leads or supplemental splice leads to shielded cable as noted.
9. Complete installation and test loop circuits or combination loop circuits.
10. Front of loop should be measured from back of stop bar, or back of crosswalk where no stop bar is installed.
11. Seal ends of conduit.

COMBINATION GALVANIZED STEEL CONDUIT (GSC) AND NON-METALLIC CONDUIT (NMC) APPLICATION

GALVANIZED STEEL CONDUIT (GSC) APPLICATION

GROUNDING DETAILS

KEY

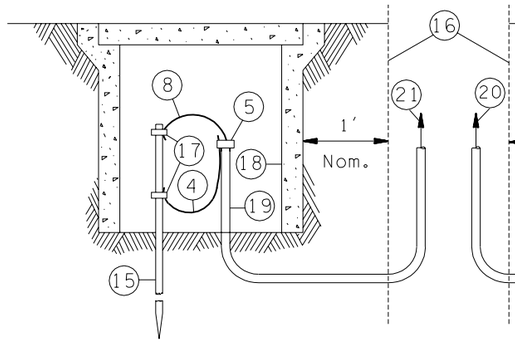

1. Service Neutral
2. Service Ground
3. Grounding Electrode Conductor
4. Bonding Jumper
5. Grounding Bushing (typ. all conduit terminations)
6. Service Neutral Bus (Copper)
7. Service Enclosure
8. Equipment Grounding Conductor
9. Junction Box
10. Electrical Load Support (luminaire pole)
11. Copper Split Bolt Clamp
12. Galvanized Steel Conduit (GSC)
13. Non-metallic Conduit (NMC)
14. Option A - 10′ GSC with Field Bend
    - Approved Adapter Fitting
    - Grounding Bushing

    Option B - 10′ GSC
    - GS Factory Elbows
    - Approved Adapter Fitting
    - GS Coupling
    - Grounding Bushing
15. Ground Rod
16. Edge of Foundation, Pole or Service Support
17. Clamp
18. Junction Box or 8″ Drain Tile with Approved Cover
19. Code Sized GSC
20. To Service Neutral Bus
21. To Grounding Terminal or Connection to Equipment Grounding System

NOTES

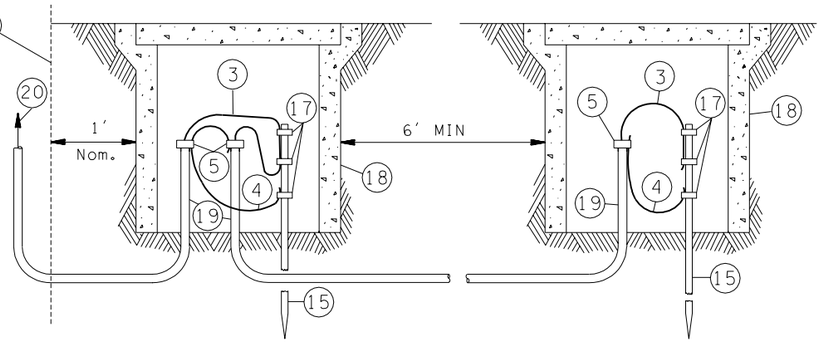

1. If parallel circuits of different sizes are contained in one conduit, the size of the grounding conductor shall be determined on the basis of the largest conductor. Only one grounding conductor is required for each conduit regardless of the number of circuits contained.
2. Service ground per serving utility requirement. If the utility uses aluminum service conductors, an approved Al-Cu pressure type ground connector shall be used to secure the service neutral to the copper neutral bar in the service enclosure. Except for the above, all grounding conductors shall be copper.
3. Equipment grounding conductors and grounding electrode conductors shall be sized in accordance with the National Electric Code (No. 8 minimum) .

SUPPLEMENTAL GROUND

Required to supplement equipment grounding for luminaire standards with direct burial, aerial feeds, or where required in plans.

SERVICE GROUND

Required at all services and separately derived systems.

09-12-01 — DATE

Washington State Department of Transportation

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

NOTES

1. Sign sequence is the same for both directions of travel, adjusted for direction of roadway curves.
2. Steady burning warning lights (Type C, MUTCD) may be used to mark channelizing devices at night as needed
3. Either reverse cone taper or sign G20-2a may be used to show end of work area.
4. Other curve or turn warning signs may be substituted for sign W1-3l and W1-3r to depict roadway alignment as appropriate.

LEGEND

- Channelizing Devices
- Type III Barricade
- Type A Flashing Warning Light

Typical application for road closure on low volume roadway, (under 400 ADT) where drivers in both directions are able to see approaching traffic through and beyond the work site.

EFFECTIVE: JANUARY 7, 2002 TO AUGUST 4, 2002

NOTES

1. Floodlights shall be provided to mark flagger stations at night.
2. If entire work area is visible from one station, one flagger may be used, otherwise two flaggers and signing will be required each direction.
3. Sign sequence is the same for both directions of travel.
4. See Buffer Data Table. Use of buffer vehicle is recommended, it may be a work vehicle. If buffer vehicle is used, minimum from end of taper to work area shall be total of "R" (roll ahead distance) plus length of vehicle, plus "B" (buffer space). If buffer vehicle is not used, minimum distance shall be "B".
5. Steady burning warning lights (Type C, MUTCD) should be used to mark channelizing devices at night as needed.
6. Either reverse cone taper or sign G20-2a may be used to show end of work area.

NOTES

1. Other warning signs, such as LOOSE GRAVEL, TRUCK CROSSING, BUMP, ABRUPT LANE EDGE, etc. may be used as necessary along with advisory speed signs. Advisory speeds are determined by the Engineer.
2. Floodlights shall be provided to mark flagger stations at night.
3. See Buffer Data Table. Use of buffer vehicle is recommended. It may be a work vehicle. If buffer vehicle is used, minimum distance from end of taper to work area shall be total of "R" (roll ahead distance) plus length of vehicle, plus "B" buffer space. If vehicle is not used, minimum distance shall be "B".

SIGN SPACING TABLE	
Speed	X
45/50 MPH	500'±
35/40 MPH	350'±
25/30 MPH	200'±

NOTES:

All concrete post bases shall be 10" minimum diameter.

All posts shall be spaced at 10' maximum intervals unless otherwise directed by the Engineer.

Top or bottom tension wires shall be placed within the limits of the first full fabric weave.

Details are illustrative and shall not limit hardware design or post selection of any particular fence type.
