Americans with Disabilities Act (ADA) Information

Materials can be provided in alternative formats by calling the ADA Compliance Manager at 360-705-7097. Persons who are deaf or hard of hearing may contact that number via the Washington Relay Service at 7-1-1.

Title VI Notice to the Public

It is Washington State Department of Transportation (WSDOT) policy to ensure no person shall, on the grounds of race, color, national origin, or sex, as provided by Title VI of the Civil Rights Act of 1964, be excluded from participation in, be denied the benefits of, or be otherwise discriminated against under any of its federally funded programs and activities. Any person who believes his/her Title VI protection has been violated may file a complaint with WSDOT's Office of Equal Opportunity (OEO). For Title VI complaint forms and advice, please contact OEO's Title VI Coordinator at 360-705-7082 or 509-324-6018.

To get the latest information on WSDOT publications, sign up for individual email updates at www.wsdot.wa.gov/publications/manuals.

Foreword

This manual contains standard engineering drawings used for road, bridge, and municipal construction. These drawings have been prepared under the direct supervision of a Washington State licensed professional engineer, who is knowledgeable in the specialized field of civil engineering depicted in each drawing. This manual standardizes fabrication, installation, and construction methods for specific items of work, and complements the contract documents and the *Standard Specifications for Road, Bridge, and Municipal Construction*.

Updating the manual is a continual process and revisions are issued periodically. Questions, comments, and recommendations for changes are welcome.

Contact the Design Standards Team at:

360-705-7256 (phone)
designstandards@wsdot.wa.gov (email)

For contact via conventional mail, the *Comment Request* Form on the reverse side of this page is provided to facilitate routing and prompt delivery. Making a copy will preserve the original form for future use. Attach a copy of the form as a cover sheet when sending comments or sketches made on other documents, such as marked copies of specific Standard Plans. Your questions, comments, and/or recommendations should be sent to:

Design Standards
Transportation Building
Olympia, WA 98504-7329.

Further information, as well as Bentley Micro Station (.dgn) CAD files, Adobe Acrobat (.pdf) files, and some AutoCAD (.dwg) CAD files, can be found on the Design Standards website at: www.wsdot.wa.gov/eesc/design/designstandards

Contact the Engineering Publications Office at 360-705-7430 if you require additional copies of this manual.

/s/Jeff Carpenter

Jeff Carpenter
State Design Engineer

B-30.90-01	Miscellaneous Details for Drainage Structures	9/20/07	
B-35.20-00	Grate Inlet Type 1 (Cast-In-Place)	6/8/06	
B-35.40-00	Grate Inlet Type 2	6/8/06	*2 Sheets*
B-40.20-00	Welded Grates for Grate Inlet	6/1/06	

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

Contents

Plan No.	Plan Title	Publication Approval Date	
B-40.40-01	Frame and Dual Vaned Grates for Grate Inlet	6/16/10	
B-45.20-00	Drop Inlet Type 1	6/1/06	
B-45.40-00	Drop Inlet Type 2	6/1/06	
B-50.20-00	Grates for Drop Inlet	6/1/06	
B-55.20-00	Pipe Zone Bedding and Backfill	6/1/06	
B-60.20-00	Connection Details for Dissimilar Culvert Pipe	6/8/06	
B-60.40-00	Coupling Bands for Corrugated Metal Pipe	6/1/06	
B-65.20-01	Animal Underpass	4/26/12	
B-65.40-00	Equipment Underpass	6/1/06	
B-70.20-00	Beveled End Sections (for Culverts 30” Diameter or Less)	6/1/06	
B-70.60-00	Flared End Sections	6/1/06	
B-75.20-01	Headwalls for Culvert Pipe and Underpass	6/10/08	
B-75.50-01	Type 1 Safety Bars for Stepped Culvert Pipe or Pipe Arch	6/10/08	
B-75.60-00	Type 2 Safety Bars for Culvert Pipe or Pipe Arch (On Cross Road)	6/8/06	
B-80.20-00	Tapered End Section with Type 3 Safety Bars	6/8/06	
B-80.40-00	Tapered End Section with Type 4 Safety Bars (On Cross Road)	6/1/06	
B-82.20-00	Residential Storm Drain, Under Sidewalk	6/1/06	
B-85.10-01	Vertical Connection (for Sanitary Sewer Use)	6/10/08	
B-85.20-00	Side Sewer Connection (for Sanitary Sewer Use)	6/1/06	
B-85.30-00	Standing Side Sewer Connection (for Sanitary Sewer Use)	6/1/06	
B-85.40-00	8 Inch Sewer Clean-Out (for Sanitary Sewer Use)	6/8/06	
B-85.50-01	Drop Connections (for Sanitary Sewer Use)	6/10/08	
B-90.10-00	Hydrant Setting Types A and B	6/8/06	
B-90.20-00	2 Inch Blowoff Assembly	6/8/06	
B-90.30-00	Combination Air Release / Air Vacuum Valve Assembly	6/8/06	
B-90.40-00	Concrete Thrust Block	6/8/06	
B-90.50-00	Concrete Thrust Block for Convex Vertical Bends	6/8/06	
B-95.20-01	Median Barrier Drainage Installation	2/3/09	
B-95.40-00	Inlet Placement at Bridge End	6/8/06	

Section C Traffic Barrier

C-1	Beam Guardrail Types 1 ~ 4 (W-Beam)	6/16/11	*2 Sheets*
C-1a	Beam Guardrail (Thrie Beam)	7/14/15	
C-1b	Beam Guardrail Posts and Blocks	7/14/15	*2 Sheets*
C-1c	Beam Guardrail	5/30/97	
C-1d	Thrie Beam Guardrail Reducer Section	10/31/03	
C-2	Guardrail Placement (Cases 1, 2 & 3)	1/6/00	
C-2a	Guardrail Placement (Cases 4, 5 & 6)	6/21/06	
C-2b	Guardrail Placement (Cases 7 & 8)	6/21/06	
C-2c	Guardrail Placement Median Bull Nose (Cases 9A, 9B & 9C)	6/21/06	
C-2d	Guardrail Placement (Cases 10A, 10B & 10C)	6/21/06	
C-2e	Guardrail Placement (Cases 11A, 11B & 11C)	6/21/06	
C-2f	Guardrail Placement Weak Post Intersection Design (8' - 6" Max. Radius) (Cases 12AC, 12AD, 12BC & 12BD)	3/14/97	

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

Contents

Plan No.	Plan Title	Publication Approval Date	
C-2g	Guardrail Placement Weak Post Intersection Design (35' Max. Radius) (Cases 13AC, 13AD, 13BC & 13BD)	7/27/01	
C-2h	Guardrail Placement (Case 14)	3/28/97	
C-2i	Guardrail Placement (Case 15)	3/28/97	
C-2j	Guardrail Placement (Cases 16, 17 & 18)	6/12/98	
C-2k	Guardrail Placement 12’ - 6” Span (Cases 19A & 19B)	7/27/01	
C-2n	Guardrail Placement 18’ - 9” Span (Case 20)	7/27/01	
C-2o	Guardrail Placement 25’ Span (Case 21)	7/13/01	
C-2p	Guardrail Placement Strong Post Intersection Design (Cases 22AC, 22AD, 22BC & 22BD)	10/31/03	
C-3	Beam Guardrail Transition Sections (Types 1, 1A, & 1B)	7/2/12	
C-3a	Beam Guardrail Transition Sections (Types 2, 4, 5, & 6)	10/4/05	
C-3b	Beam Guardrail Transition Sections (Types 10 ~ 15)	6/27/11	*2 Sheets*
C-3c	Beam Guardrail Transition Sections (Types 16, 17, & 18)	6/27/11	
C-4b	Beam Guardrail Flared Terminal	6/8/06	
C-4e	Beam Guardrail Non-Flared Terminal	10/23/14	
C-4f	Beam Guardrail Bull Nose Terminal	7/2/12	*4 Sheets*
C-6	Beam Guardrail Anchor Type 1	5/30/97	*2 Sheets*
C-6a	Beam Guardrail Anchor Type 2	10/14/09	
C-6c	Beam Guardrail Anchor Type 4	1/6/00

SECTION (C)

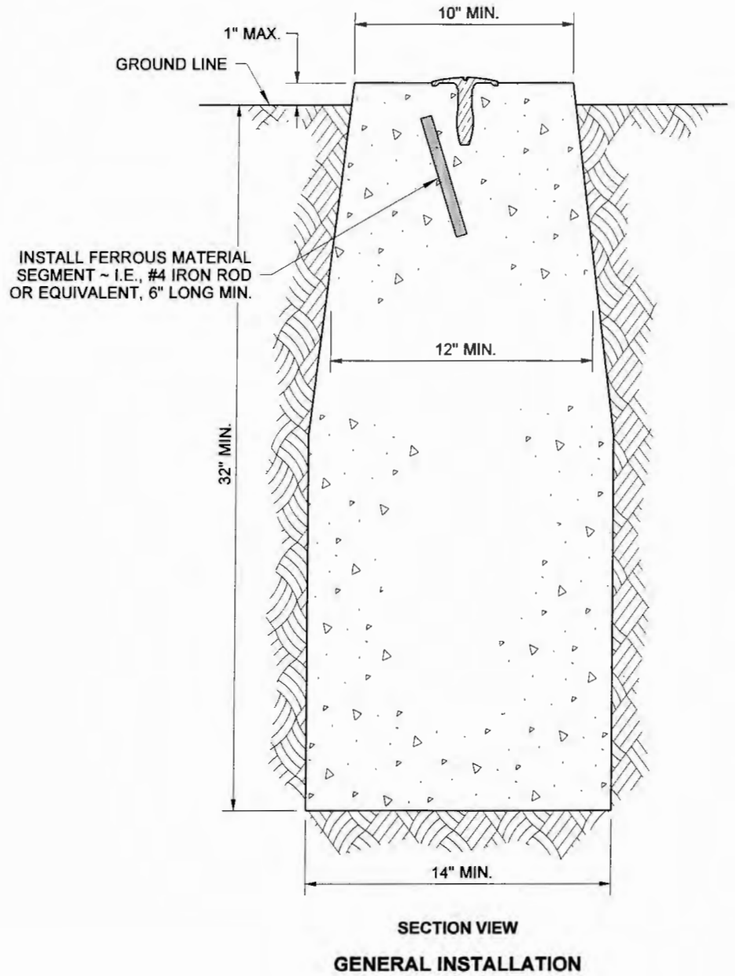

SECTION OF GROOVE FOR 1/4" LETTERS

SECTION OF GROOVE FOR 3/16" LETTERS

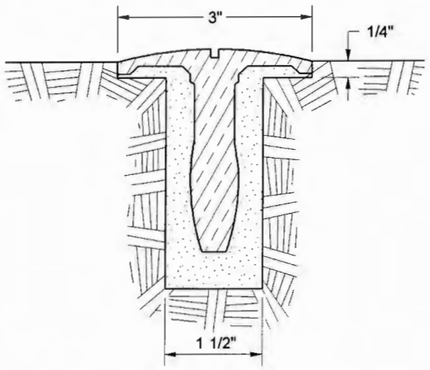

NOTES

1. The Brass Disc will be furnished by the State.
2. The text in the shaded area (see TOP VIEW) shall be 3/16" high and will be stamped by WSDOT personnel prior to setting the cap. Only the assigned identification letters and numbers are to be placed on the Brass Disc.
3. The hole shall be 32" minimum in depth or 6" below the deepest recorded frost line. All loose material shall be removed from the bottom of the hole so that the concrete is placed on firm undisturbed earth.
4. The top of the concrete shall be troweled smooth and the Brass Disc set in the center with top flush and level. The top of the monument may be recessed or protruding, depending on conditions.
5. The Brass Disc shall be rotated so it can be read while the observer is facing north.
6. When the concrete is set, cover the entire monument with moist earth and leave for three days.
7. To replace a Public Land Survey System (PLSS) corner, consult a licensed Professional Land Surveyor (PLS).

TYPICAL SECTION

LEVEL GROUND LINE

TYPICAL SECTION

ASCENDING GROUND LINE

TYPICAL SECTION

DESCENDING GROUND LINE

NOTES

1. Slope treatment shall be constructed simultaneously with the roadway excavation. Hand trimming will not be required if satisfactory results are obtained with mechanical equipment.

2. Slope treatment is used to provide a transition between the existing ground and the cut slope. The intended purpose is to eliminate the abrupt edge and give the area a more natural appearance. The dimensions shown are approximate and can vary to achieve this purpose.

CUT SLOPE (H : V)	GROUND LINE (H : V)	CLASS A L = 10.0' D	CLASS B L = 5.0' D

NOTES

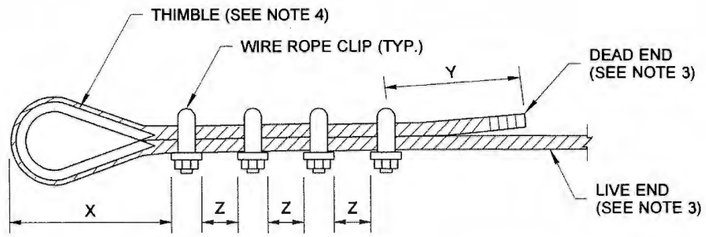

1. Maximum anchor spacing (**A**) for debris and impact loads required as per table for a minimum allowable anchor capacity of 20,000 lbs. Systems subjected to snow loads may require narrower maximum spacing.
2. Hexagonal mesh must meet minimum requirements of ASTM A975 for gabions.
3. U-Section of wire rope clip must be applied to the dead end, and saddle of wire rope clip must be applied to the live end of the rope as shown.
4. All wire rope loops shall include a standard weight thimble.

NOTES

1. Use the 1/2 inch joint details for bridges with expansion length less than 100 feet and for bridges with L type abutments. Use the 1 inch joint details for other applications. Use Detail 5 on steel trusses and timber bridges with concrete deck panels.
2. Sawcut shall be as described in **Standard Specification 5-05.3(8)** and sealed in accordance with **Standard Specification 5-05.3(8)B**.
3. The Contractor shall avoid sawcutting concrete at all locations. For Details 1 and 2, the construction tolerance to locate the sawcut is 1/4 inch (0 min. to 1/2 inch max.) from the concrete.
4. For Details 1, 2, 3, and 4, the item "HMA SAWCUT AND SEAL" shall be used for payment. For Details 5 and 6, the item "PAVED PANEL JOINT SEAL" shall be used for payment. For Detail 7, the item "SEALING EXISTING LONGITUDINAL AND TRANSVERSE JOINT" shall be used for payment.

LONGITUDINAL SECTION

BENDING DIAGRAM

AP8 E #6 BARS SHALL BE PLACED WITH THE AP4 E #6 BARS ALONG EACH EDGE OF BRIDGE APPROACH SLAB HAVING A TRAFFIC BARRIER.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES

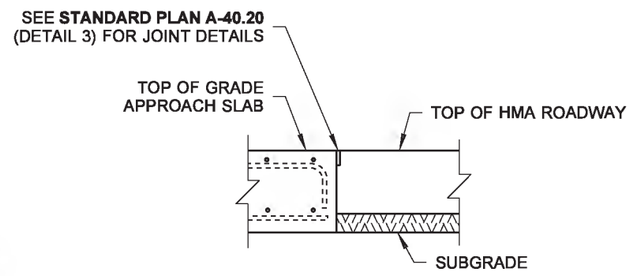

1. All edges of the approach slab shall have 1/2" (in) radii except at longitudinal construction joints and adjacent to L-Type abutments.

2. Longitudinal joints shall be placed on lane lines and shall be constructed and sealed in accordance with **Standard Specification Section 5-05.3(8)**. Joints may be either a sawcut crack control joint or a construction joint. Sawcut joints shall terminate 1' - 0" before reaching edge of slab and must be sawcut as soon as possible after placement of concrete.

   (A) Approach slabs less than 40' (ft) wide -- no joint is required.

   (B) Approach slabs wider than 40' (ft) -- one or more joints are required to divide the slab into approximately 24' (ft) wide sections.

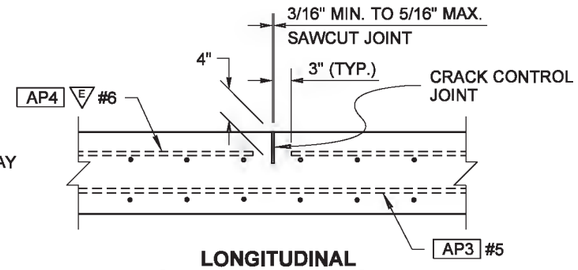

3. The minimum lap splice of #5 is 2' - 0". E #5 is 2' - 6". E #6 is 3' - 0". And #8 is 3' - 3". All lap splices shall be staggered so that no more than 50% of rebar is spliced at the same location. Lap splices shall be located within the middle half of the bridge approach slab. Optional splices are allowed for AP4 E #6.

PLAN VIEW

FULL PANEL REPLACEMENT DETAIL

NOTES

1. Install tie bars across longitudinal joints between new panels (complete and partial) and existing cement concrete pavement lane or shoulder when four or more adjacent panels are replaced. Place new tie bars between existing tie bars.Tie bars are not installed between cement concrete pavement and hot mix asphalt shoulders.
2. Place a bond-breaking material such as polyethylene film, roofing paper, or other material approved by the Engineer along all existing concrete surfaces and between the bottom of the slab and bases prior to placing concrete.
3. Place new dowel bars between existing dowel bars. The 1' - 0" dimension from the edge of the panel may be increased by 6" (in) to avoid bar in existing panel.
4. Bars shall meet the requirements of **Standard Specification 9-07.5(1)** or **9-07.5(2)**.

ELEVATION VIEW

HMA OVERLAY WITHOUT BRIDGE APPROACH SLAB

ELEVATION VIEW

HMA OVERLAY WITH BRIDGE APPROACH SLAB

NOTES

1. A typical bridge overlay will remove 0.07 feet of Asphaltic Concrete Pavement (ACP) and place 0.15 feet of new Hot Mixed Asphalt (HMA). Depth of removal and placement will vary for each bridge. Total depth of HMA on the bridge shall not exceed 0.25 feet, unless shown otherwise in the plans.
2. If the existing depth of asphalt on the bridge deck is 0.25 feet, then the overlay will remove 0.15 feet of ACP and place 0.15 feet of new HMA. The existing bridge grade will remain unchanged.
3. FINAL GRADE TRANSITION: The maximum longitudinal taper slope to transition an increase in roadway grade to the new or existing bridge grade will be at most 1 inch rise to 40 feet run (1V:480H or flatter) (0.2% maximum). If several overlays are present, extended taper lengths shall be required to maintain the transition slope (1V:480H or flatter) (0.2% maximum).
4. If the ACP and membrane is to be removed from the bridge deck, see GSP 023106 for deck preparation before placing new membrane.
5. In accordance with Standard Specification 5-05.3(12), when pavement abuts bridges, the finished pavement parallel to centerline shall be uniform to a degree that no variations greater than 1/8-inch are present when tested with a 10-foot straightedge.

FOR DELAMINATION AND FULL DEPTH REPAIR

DELAMINATION SECTION (A)

FULL DEPTH REPAIR SECTION (B)

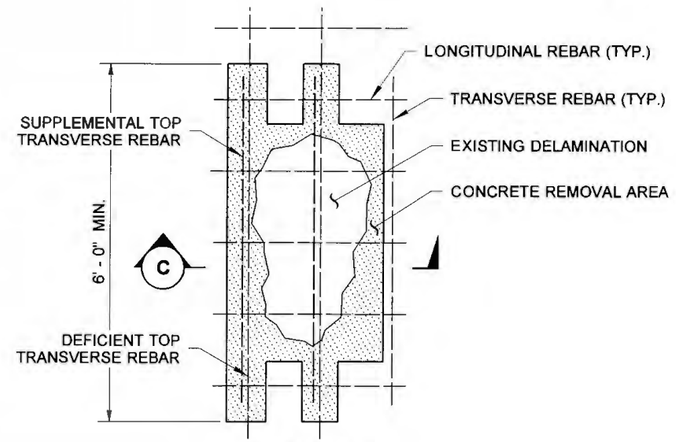

DELAMINATION AND FULL DEPTH REPAIR

NOTES

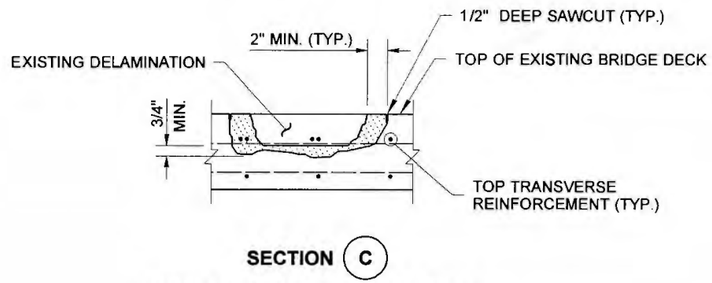

1. If a zone has rebar section loss or full depth repairs, then the concrete deck repair in each zone shall achieve 3,000 PSI before progressing to the adjacent zone.
2. Remove all concrete 3/4" minimum clearance around all exposed reinforcement bars in accordance with Standard Specification 6-09.3(6).
3. For tension zones of continuous structures, when a longitudinal reinforcement bar has greater than 20% section loss (or damage), remove concrete a minimum of 3' - 6" on each side of section loss and place 2 supplemental reinforcement bars, adjacent and parallel to the deficient bar, extending 3' - 0" beyond each side having 20% section loss. Mechanical splices may be used to facilitate placement of #4 reinforcement bars.
4. For typical rebar repairs, when the reinforcement has greater than 20% section loss (or damage), remove concrete a minimum of 2' - 6" on each side of section loss, and replace with new supplemental reinforcement, same diameter as original, adjacent and parallel to the deficient bar, extending 2' - 3" beyond each end of section having 20% section loss.

NOTES

1. As acceptable alternatives to the rebar shown in the PRECAST BASE SECTION, fibers (placed according to the Standard Specifications), or wire mesh having a minimum area of 0.12 square inches per foot shall be used with the minimum required rebar shown in the ALTERNATIVE PRECAST BASE SECTION. Wire mesh shall not be placed in the knockouts.
2. The knockout diameter shall not be greater than 20". Knockouts shall have a wall thickness of 2" minimum to 2.5" maximum. Provide a 1.5" minimum gap between the knockout wall and the outside of the pipe. After the pipe is installed, fill the gap with joint mortar in accordance with Standard Specification 9-04.3.
3. The maximum depth from the finished grade to the lowest pipe invert shall be 5'.
4. The frame and grate may be installed with the flange down, or integrally cast into the adjustment section with flange up.
5. The Precast Base Section may have a rounded floor, and the walls may be sloped at a rate of 1:24 or steeper.
6. The opening shall be measured at the top of the Precast Base Section.
7. All pickup holes shall be grouted full after the basin has been placed.

ELBOW DETAIL

VIEW (A)

SHEAR GATE DETAILS

NOTES

1. The pipe supports and the flow restrictor shall be constructed of the same material and be anchored at a maximum spacing of 36". Attach the pipe supports to the manhole with 5/8" stainless steel expansion bolts or embed the supports into the manhole wall 2".
2. The vertical riser stem of the flow restrictor shall be the same diameter as the horizontal outlet pipe with a minimum diameter of 8".
3. The flow restrictor shall be fabricated from one of the following materials:

   0.060" Corrugated Aluminum Alloy Drain Pipe
   0.064" Corrugated Galvanized Steel Drain Pipe with Treatment 1
   0.064" Corrugated Aluminized Steel Drain Pipe
   0.060" Aluminum alloy flat sheet, in accordance with ASTM B 209, 5052 H32 or EPS
   High Density Polyethylene Storm Sewer Pipe
4. The frame and ladder or steps are to be offset so that: the shear gate is visible from the top; the climb-down space is clear of the riser and gate; the frame is clear of the curb.
5. The multi-orifice elbows may be located as shown, or all placed on one side of the riser to assure ladder clearance. The size of the elbows and their placement shall be specified in the Contract.
6. Restrictor plate with orifice as specified in the Contract. The opening is to be cut round and smooth.
7. The shear gate shall be made of aluminum alloy in accordance with ASTM B 26 and ASTM B 275, designation ZG32A; or cast iron in accordance with ASTM A 48, Class 30B.

   The lift handle shall be made of a similar metal to the gate (to prevent galvanic corrosion), it may be of solid rod or hollow tubing, with adjustable hook as required.

   A neoprene rubber gasket is required between the riser mounting flange and the gate flange.

   Install the gate so that the level-line mark is level when the gate is closed.

   The mating surfaces of the lid and the body shall be machined for proper fit.

   All shear gate bolts shall be stainless steel.
8. The shear gate maximum opening shall be controlled by limited hinge movement, a stop tab, or some other device.
9. Alternative shear gate designs are acceptable if material specifications are met and flange bolt pattern matches.

DETAIL SECTION (A)

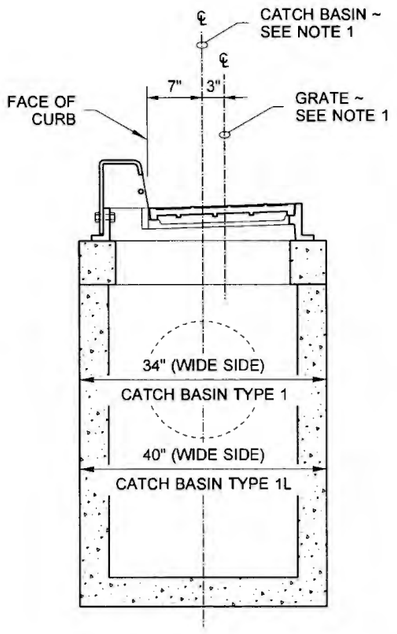

NOTES

1. This inlet requires the precast catch basin unit to be rotated 90 degrees so that the narrow side is parallel to the curb line. When calculating offsets from curb to CL of the precast catch basin, please note that the CL of the grate is not the CL of the precast catch basin. See **Section A**
2. The dimensions of the frame and hood may vary slightly among different manufacturers. The Frame may have cast features intended to support a debris guard. Hood units may be mounted inside or outside of the frame. The methods for fastening the safety bar / debris guard rod to the hood may vary. The hood may include casting lugs. The top of the hood may be cast with a pattern.
3. Attach the hood to the frame with two 3/4" × 2" hex head bolts, nuts, and oversize washers. The washers shall have diameters adequate to ensure full bearing across the slots.
4. Bolt-down capability is required on all frames, grates and covers, unless specified in the Contract. Provide two holes in the Frame that are vertically aligned with the grate slots. The frame shall accept the 5/8" × 11 NC × 2" allen head cap screw by being tapped, or other approved mechanism. The location of bolt-down holes varies among manufacturers. See BOLT-DOWN DETAIL, **Standard Plan B-30.10.**
5. Only ductile iron Vaned Grates shall be used. See **Standard Plans B-30.30 and B-30.40** for grate details. Refer to **Standard Specification 9-05.15(2)** for additional requirements.
6. This plan is intended to show the installation details of a manufactured product. This plan is not intended to show the specific details necessary to fabricate the castings depicted in this drawing.

PROFILE WALL PVC (STD. SPEC. 9-05.12(2))	15"

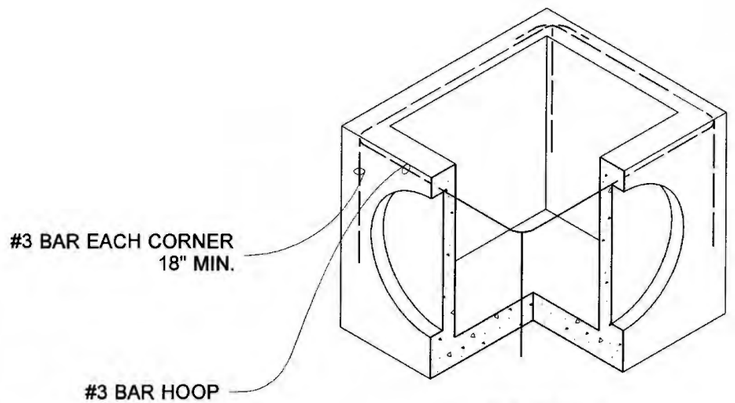

* CORRUGATED POLYETHYLENE STORM SEWER PIPE

NOTES

1. As acceptable alternatives to the rebar shown in the **PRECAST BASE SECTION**, fibers (placed according to the Standard Specifications), or wire mesh having a minimum area of 0.12 square inches per foot shall be used with the minimum required rebar shown in the **ALTERNATIVE PRECAST BASE SECTION**. Wire mesh shall not be placed in the knockouts.
2. The knockout diameter shall not be greater than 18". Knockouts shall have a wall thickness of 2" minimum to 2.5" maximum. Provide a 1.5" minimum gap between the knockout wall and the outside of the pipe. After the pipe is installed, fill the gap with joint mortar in accordance with Standard Specification 9-04.3.
3. The maximum depth from the finished grade to the lowest pipe invert shall be 5'.
4. The frame and grate may be installed with the flange up or down. The frame may be cast into the adjustment section.
5. The Precast Base Section may have a rounded floor, and the walls may be sloped at a rate of 1:24 or steeper.
6. The opening shall be measured at the top of the precast base section.
7. All pickup holes shall be grouted full after the inlet has been placed.

SECTION (A)

NOTES

1. This frame is designed to accommodate 20" × 24" grates or covers as shown on Standard Plans **B-30.20, B-30.30, B-30.40,** and **B-30.50**.
2. Bolt-down capability is required on all frames, grates, and covers, unless specified otherwise in the Contract. Provide 2 holes in the frame that are vertically aligned with the grate or cover slots. The frame shall accept the 5/8" - 11 NC × 2" Allen head cap screw by being tapped, or other approved mechanism. Location of bolt-down holes varies by manufacturer.
3. Refer to **Standard Specification 9-05.15(2)** for additional requirements.

RING PLAN

RING SECTION (A)

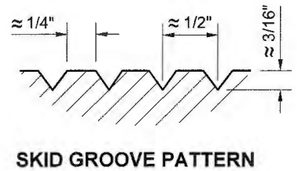

RING PLAN

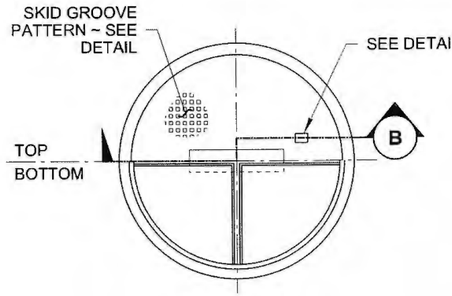

RING SECTION (A)

NOTES

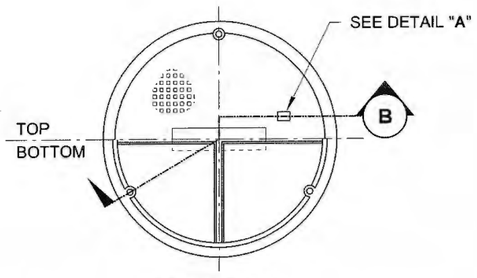

1. The gasket and groove may be in the seat (frame) or in the underside of the cover. The gasket may be "T" shaped in section. The groove may be cast or machined.
2. Bolt-down capability is required on all frames, grates, and covers, unless specified otherwise in the Contract. Provide 3 holes in the frame that are vertically aligned with the grate or cover slots. The frame shall accept the 5/8" - 1 NC × 2" Allen head cap screw by being tapped, or other approved mechanism. Location of bolt down holes varies by manufacturer.
3. For bolt-down manhole ring and covers that are not designated "Watertight," the neoprene gasket, groove, and washer are not required.
4. Washer shall be neoprene (Detail "B").
5. In lieu of blind pick notch for manhole covers, a single 1" pick hole is acceptable. Hole location and number of holes may vary by manufacturer.
6. Alternative reinforcing designs are acceptable in lieu of the rib design.
7. For clarity, the vertical scale of the Cover Section has been exaggerated, it is 1.5 times the horizontal scale (1H:1.5V).

CONCRETE COLLAR OPTION

COUPLING BAND OPTION

NOTES

1. The Concrete Collar width shall be one half of the outside pipe diameter of the largest pipe. The minimum Concrete Collar width shall be 12". Concrete Collars may be used with all pipe materials and diameters. The Concrete Collar option shall only be used to extend existing pipes.

2. Steel Welded Wire Fabric shall be in accordance with Standard Specification 9-07.7. Install two wraps for size 6 × 6 W1.4 × W1.4 (10 Gage) Steel Welded Wire Fabric or one wrap for any of the following sizes:
   6 × 6 W2.1 × W2.1 (8 Gage)
   6 × 6 W2.9 × W2.9 (6 Gage)
   4 × 4 W2.9 × W2.9 (6 Gage)
   4 × 4 W4.0 × W4.0 (4 Gage)

3. When a Coupling Band connection requires attachment to the bell end of a concrete pipe, the bell end of the pipe shall be removed before the connection is installed.

4. Increase the outside diameter of the metal pipe to match the outside diameter of the concrete pipe by installing 12" wide rubber gaskets, thickness as required (Coupling Band only). The rubber gaskets shall be in accordance with Standard Specification 9-04.4(3).

5. Use a flat Type K Coupling Band. Type K Coupling Bands with dimples are not allowed for the installation detail shown. The Coupling Band option shall only be used for extending existing pipes that have an inside diameter of 36" or less.

SECTION

NOTES

1. Span and rise dimensions are nominal and are measured to the inside crests of corrugations.
2. Allowable heights of cover shall be within the limits indicated in the table included hereon. Minimums and maximums are shown.
3. Unless indicated otherwise a 10" depth (over the inside crests of corrugatons) of earth shall be placed in the invert of the Structural Plate Underpass, Design 1, for its full width and length. The earth shall consist of naturally occurring materials available in the vicinity of the structural plate underpass installation. See **Standard Specification 7-03.3(4).**
4. Designed for H-20 live load and maximum allowable soil pressure of 6 Kips per square foot.

THERMOPLASTIC PIPE

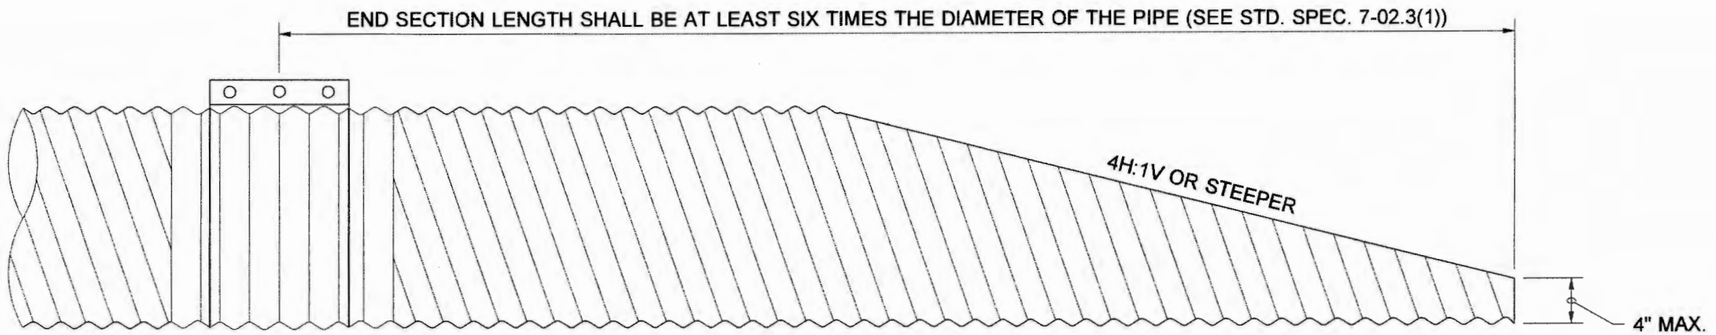

NOTES

1. The culvert ends shall be beveled to match the embankment or ditch slope and shall not be beveled flatter than 4H:1V. When slopes are between 4H:1V and 6H:1V, shape the slope in the vicintiy of the culvert end to ensure that no part of the culvert protrudes more than 4" above the ground line.

2. Field cutting of culvert ends is permitted when approved by the Engineer. All field-cut culvert pipe shall be treated with treatment as shown in the Standard Specifications or General Special Provisions.

PIPE ~ ELEVATION

PIPE & PIPE ARCH ~ PLAN

PIPE ARCH ~ ELEVATION

SECTION (A)

TOE PLATE EXTENSION ~ WHEN REQUIRED; GALVANIZED STEEL OR ALUMINUM, SAME GAGE AS SKIRT, LAPPED 2", FASTENED W/ 3/8" S.S. OR AL. RIVETS OR GALVANIZED BOLTS ON 12" MAX. CENTERS.

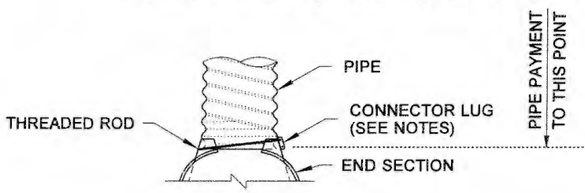

NOTES

1. The diameter of the end section of Design B shall match the inside diameter of the concrete pipe.
2. Skirt sections shall be made in one piece for round pipe with a diameter of 12" to 24" inclusive and for pipe arches with a rise of 13" to 20" inclusive. Skirt sections for larger sizes of pipes may be multiple pieces in conformance with the tabulated values shown.
3. Design A end sections for 42" thru 84" diameter and 49" x 33" thru 83" x 57" arch with annular corrugations and all helically corrugated pipe arch include one foot of pipe length as a connector section. The connector section shall be attached to the end section by welds, rivets or bolts and shall be the same thickness as the end section.
4. Design C may be used in lieu of Design A for all metal pipe sizes except as noted. Coupling bands may be any acceptable type for the pipe specified.
5. Multiple panel skirts shall have 2" lap seams tightly joined by 3/8" stainless steel rivets or galvanized bolts on 6" max. centers.
6. The reinforced edges of the following size End Sections shall be supplemented with galvanized steel stiffener angles:

   60" thru 72" diameter pipe ..... 2" x 2" x 1/4" angle

   78" and 84" diameter pipe, and
   77" x 52" & 83" x 57" pipe arch ..... 2 1/2" x 2 1/2" x 1/4" angle

   The above galvanized angles shall be attached by 3/8" galvanized nuts and bolts.
7. Galvanized steel angle reinforcement will be placed under the center panel seams on the 72" thru 84" diam. pipe and 77" x 52" & 83" x 57" pipe arch End Sections.
8. As an alternative to the connector lug and threaded rod used on 12" thru 24" culvert pipe, the attachment may be made with a 1" wide strap, 16 gage galvanized steel fastened with a 1/2" diam., 6" long galvanized bolt and one squarehead nut.

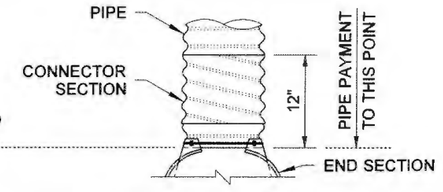

FOR 12" THRU 24" PIPE AND 17" x 13" THRU 28" x 20" PIPE ARCH WITH ANNULAR END CORRUGATIONS

TYPE 1

FOR 30" THRU 84" PIPE AND 35" x 24" THRU 83" x 57" PIPE ARCH WITH ANNULAR END CORRUGATIONS

TYPE 2

NOTES

1. The variable dimension indicated for the height of step for step mitered pipes shall conform to the manufacturers recommendations unless specified differently on the plans or in the Special Provisions.
2. Reinforcing steel shall have 1 1/2" min. clear cover to all concrete surfaces.
3. Headwalls for concrete culvert pipe may omit anchor bolt attachment.
4. When steel pipe safety bars ar used, headwall thickness shall be increased to 8".

CULVERT DIAM.	NUMBER OF BARS REQUIRED
UP TO 36"	NONE
42" ~ 60"	1
66" ~ 90"	2
96" ~ 120"	3

NOTES

1. Sockets shall be 3" extra strong steel pipe (3 1/2" O.D.). Sockets must be the proper angle and height so that safety bars are parallel with headwall and side slope, and are easily removable.
2. Safety Bars shall be 4" extra strong steel pipe (4 1/2" O.D.), or 4 1/2" O.D. (.250" wall thickness) steel tubing. Length (20' maximum) shall be the minimum required to achieve Resin Bonded Anchor placement in full depth concrete. When multiple bars are required (see table) place bars at equal spacing (30" max.).
3. Bevel culvert pipe to match side slope.
4. Resin bonded anchors shall be 7" in length (5" embedment).
5. Centerline of headwall shall be normal to roadway centerline.

NOTES

1. Contractor to provide blocking adequate to withstand full test pressure.
2. Divide thrust by safe bearing load to determine required area (in square feet) of concrete to distribute load.
3. Areas to be adjusted for other pressure conditions.
4. Provide two 1" minimum diameter rods on valves up through 10" diameter. Valves larger than 10" require special tie rod design.

BEAM GUARDRAIL BLOCKS AND RAIL ELEMENTS NOT SHOWN FOR CLARITY

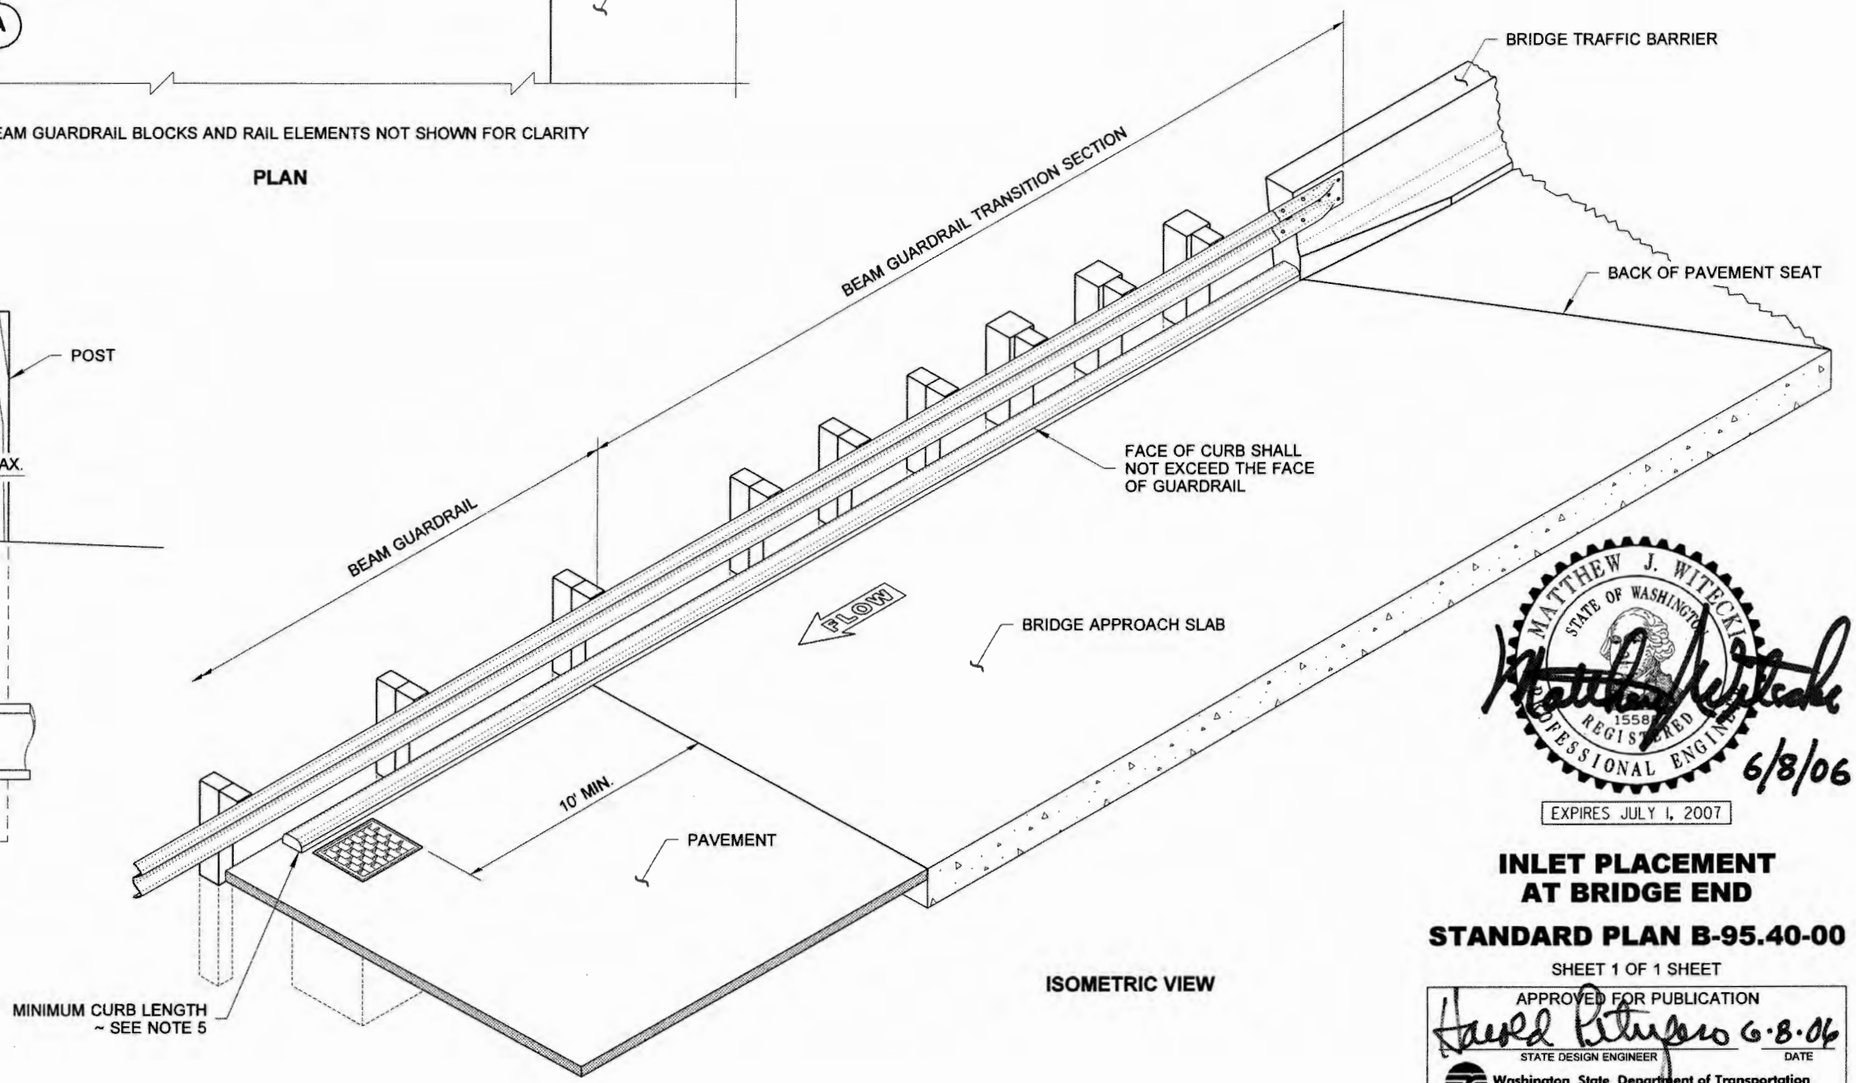

PLAN

SECTION (A)

NOTES

1. The beam guardrail type, post type, beam guardrail transition section type, connection type, and bridge traffic barrier shape may vary from that shown on this plan.
2. The Catch Basin or Grate Inlet shall be centered between the Beam Guardrail Posts.
3. With Beam Guardrail Transition Section Types 2, 4, and 5, use Extruded Curb Types 1, 2, 4, 4a, 5, or 5a.
4. With Beam Guardrail Transition Section Types 1, 1A, 1B, 10, 11, and 12, use Extruded Curb Type 2 (Extruded Asphalt Concrete Curb).
5. See Contract Plans for length of Curb.

ALL MOUNTING AND SPLICE HARDWARE SAME AS FOR TIMBER POST EXCEPT AS NOTED

ASSEMBLY DETAIL

NOTES

1. When required by the Contract, a Snow Load Post Washer shall be used on the backside of the post (in lieu of the 1 3/4" Post Bolt Washer) and a Snow Load Rail Washer shall be placed on the face side of Beam Guardrail Types 1 and 2. Snow Load Rail Washers shall not be installed on terminals.
2. Rail Washers, also called "Snow Load Rail Washers" are not required on new installation except as called for in Note 1. Unnecessary Rail washers need not be removed from existing installations, except those on posts 2 through 8 of a BCT installation shall be removed.
3. Beam Guardrail post spacing for Types 1 through 4 shall be 6' - 3" on centers.
4. Timber blocks shall be toe-nailed to the post with a16d galvanized nail to prevent block rotation.
5. For post and block details, see **Standard Plan C-1b**.
6. When "Beam Guardrail Type - ___ Ft. Long Post" is specified in the Contract, the post length shall be stamped with numbers, 1 1/2" min. high and 3/4" wide at the location where the letter "H" is shown in the ASSEMBLY DETAIL. For wood post applications, the letter shall be stamped to a minimum depth of 1/4". For steel post applications, the letter shall be legible after the post is galvanized. After post installation, it shall be the Contractor's responsibility to ensure that the stamped numbers remain visible.
7. Existing posts shall not be raised. Replace posts as necessary to achieve required guardrail height.

SECTION (A)

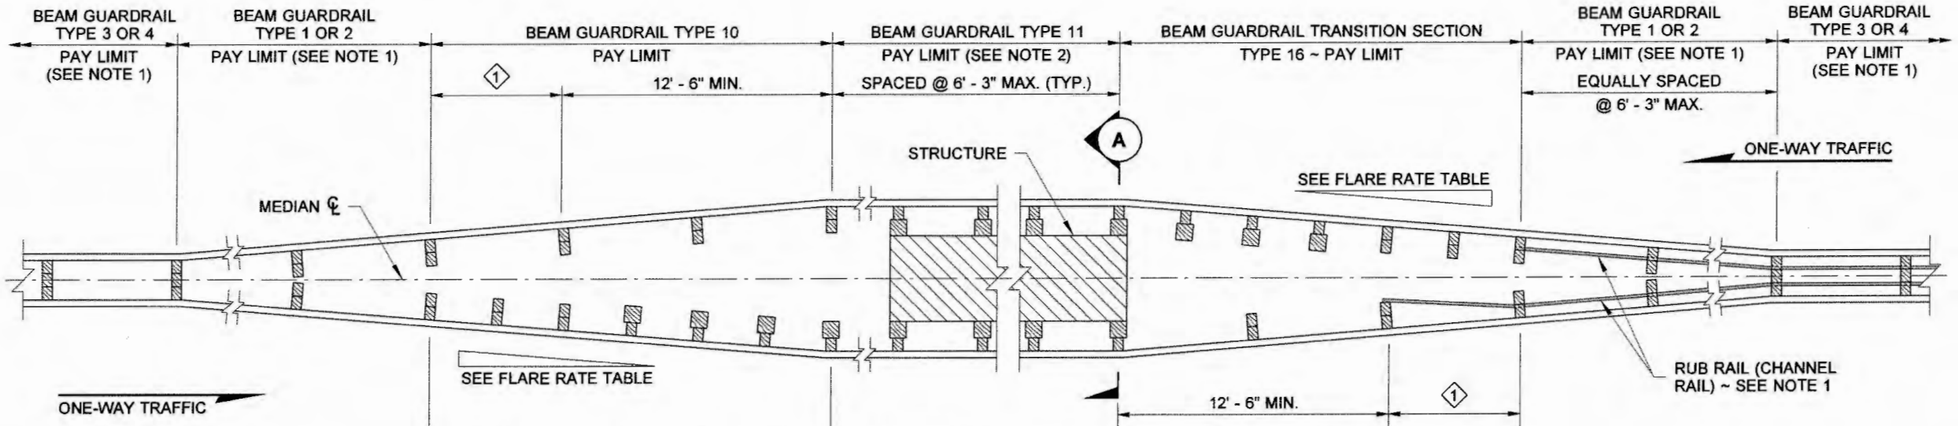

DETAIL (B)

① THRIE BEAM GUARDRAIL REDUCER SECTION TYPE B

DRAWN BY: ELENA BRUNSTEIN

NOTES

1. Varying flare rates and structure widths may require a length of Beam Guardrail Type 1 or 2 between the Beam Guardrail Type 3 or 4 and the Transition on one side, and the Beam Guardrail Type 10 on the other. For Beam Guardrail Type 2 or 3, terminate the rub rail (channel rail) at the first 6×8 post of the Beam Guardrail Transition Section Type 16, and by lapping it behind the second 6×8 post on the Beam Guardrail Type 10 side, or as approved by the Engineer.
2. Use the minimum number of nested 12' - 6" thrie beam sections needed to span the structure. This run may extend past the end of the structure, and an excess of 6' - 3" maximum is acceptable. If the last 12' - 6" section extends more than 6' - 3" (but less than 12' - 6"), use a nested 6' - 3" thrie beam section in its place.
3. The Beam Guardrail Transition Section Type 16 on this end shall terminate at a 10×10 post. Place nested thrie beam with 10×10 posts at 3' - 1 1/2" maximum spacing between the end of the transition and the structure.
4. If full post depth cannot be achieved due to the structure foundation, post length shall be adjusted to the top of foundation. The Beam Guardrail Type 11 post height shall be 2' - 9".

(see Note 6)

CASE 12 B_
(see Note 7)

NOTES

1. See Contract for guardrail connection to bridge rail and concrete barrier.
2. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1.
3. Attach to rail with 5/16" x 9" long bolt, nut and 1½" washer on back of post.
4. For terminal type and details, see Contract and applicable Standard Plan(s).
5. Radius dimensions shall be etched into plate replacing the letters "HH", shown on the Identification Plate Detail. Digits shall be 1½" MIN height and ¾" MAX width. The plate shall be galvanized after etching.
6. The guardrail radius Identification Plate shall be mounted on the back side of the Rail Element using the lowest splice bolt at the P.C. of the guardrail radius.
7. First letter of case designation placement indicates end treatment on side road. Second letter indicates end treatment on main road. For instance, a Type 5 Anchor on the side road and a bridge connection on the main road would be Case 12 AC.
8. For the 8'- 6" radius, five CRT posts are required including the CRT post at point B.
9. For CRT post details, see Standard Plan "Beam Guardrail Posts and Blocks".

REQUIREMENTS			
RADIUS	NUMBER OF CRT POSTS (SEE NOTE 3)	CLEAR AREA	
		L	W
17'- 0"	6	30'	15'
25'- 6"	8	40'	20'
35'- 0"	11	50'	20'

NOTES

1. See Contract Plans for guardrail connection to bridge rail and concrete barrier.
2. The slope from the edge of the shoulder into the face of the guardrail should not be steeper than 10:1.
3. Fewer CRT posts are required for smaller radii; include CRT Post at Point B. Attach guardrail to post with a 5/16" x 9" long bolt, a 3/8" I.D. x 7 1/2" snug fitting insert, and a 1 1/2" washer with nut on back of post.
4. For terminal type and details, see Contract and applicable Standard Plan(s).
5. Radius dimensions shall be etched into plate replacing the letters "HH", shown on the GUARDRAIL RADIUS IDENTIFICATION PLATE DETAIL. Digits shall be 1 1/2" minimum height and 3/4" maximum width. Plate shall be galvanized after etching.
6. The guardrail radius Identification Plate shall be mounted on the back side of the rail element using the lowest splice bolt nearest the PC of the guardrail radius (See View A).
7. The first letter of the Case Designation indicates the end treatment on the side road. The second letter indicates the end treatment on the main road. For example, a Type 5 Anchor on the side road with a bridge connection on the main road would be Case 13 AC, the combination shown.
8. For CRT post details, see Standard Plan C-1b.

NOTES

1. Unless otherwise indicated in the contract, the SRT - 350 (12.5, 8 Post) as manufactured by Trinity Industries, Inc., or a FLEAT 350 as manufactured by Road Systems Inc., shall be installed per manufacturer's recommendations. If specified in the Contract, the FLEAT TL2 as manufactured by Road Systems, Inc. shall be installed per manufacturers recommendations.
2. Where terminal is placed on a curve, and post offsets would result in the rail encroaching onto the shoulder (e.g., the inside of a curve), the posts shall be installed so that the faceof the rail is at the edge of the shoulder.
3. When snow load post washers and snow load rail washers are called for in the contract, the snow load rail washers must be omitted within the terminal limits.
4. Offset distances:
   - FLEAT 350 ..... 4' - 0"
   - FLEAT TL2 ..... 1' - 8" minimum

NOTES

1. An SKT-350 as manufactured by Road Systems, Inc. shall be installed according to manufacturer's recommendations. When a TL2 terminal is specified in the Contract an SKT-TL2 as manufactured by Road Systems, Inc. shall be installed according to the manufacturer's recommendations.
2. A reflectorized object marker shall be installed according to manufacturer's recommendations.
3. When snow load post washers and snow load rail washers are required by the Contract, the snow load rail wahsers must not be installed within the terminal limits.
4. Terminal shall be installed at a taper, ensuring that end piece is entirely off shoulder.
5. Length for SKT-350 is 50' (ft). Length for SKT-TL2 is 25' (ft).

BARRIER SECTION

NOTES

1. Wire rope loops shall be 3' - 8" long, except for the top loop of the Barrier Terminal, which shall be 2' - 0" long.
2. Except for the locations of the wire rope loops, the dimensions shown in END VIEW "A" are typical for both ends of a Barrier Section or opposing ends of Barrier Terminals.
3. Connecting and Drift Pin head designs vary among different manufacturers. Pin designs that are shaped differently than those shown in the detail are acceptable, if the bearing surface is within the minimum and maximum widths specified.
4. The vertical spacing of the Wire Rope Loops in a Barrier Terminal is determined by the end of the Barrier Segment to which it is being connected. See BARRIER CONNECTION DETAIL (Sheet 2).

CASE 1-31

NOTES

1. For component details, see **Standard Plan C-23.60**.
2. For terminal type and details, see Contract Plans and applicable drawings.
3. The slope from the edge of the shoulder into the face of the guardrail cannot exceed 10H : 1V when the face of the guardrail is less than 12' - 0" from the edge of the shoulder.
4. For one-way traffic and where a crashworthy terminal is not required, use the Beam Guardrail Anchor Type 10; see **Standard Plan C-23.60**.
5. Where a crashworthy terminal is required, use a Beam Guardrail Type 31 Non-Flared Terminal; see **Standard Plan C-22.40**.
6. Timber or steel post. Steel post shown.

(SEE NOTE 6)

NOTES

1. See Contract for transition and connection type.
2. For additional installation requirements for Non-Flared Terminal placement, see **Standard Plan C-22.40.**
3. Guardrail installation shall be Beam Guardrail Type 31 with standard post and block. See **Standard Plan C-20.10** for additional details.
4. The first letter of case designation indicates the end treatment on the side road. The second letter indicates the end treatment on the main road. For instance, a terminal on a side road and a bridge connection on the main road would be Case 22BC-31.
5. The radius dimension shall be etched into the plate as shown in the example on the Identification Plate Detail. Numerals shall be 1 1/2" (in) high minimum, and 3/4" (in) wide maximum. Plate shall be galvanized after etching and the letter shall remain permanently legible.
6. The guardrail Identification Plate shall be mounted at the lower splice bolt on the back side of the rail element at the PC of the guardrail radius.

SECTION (B)

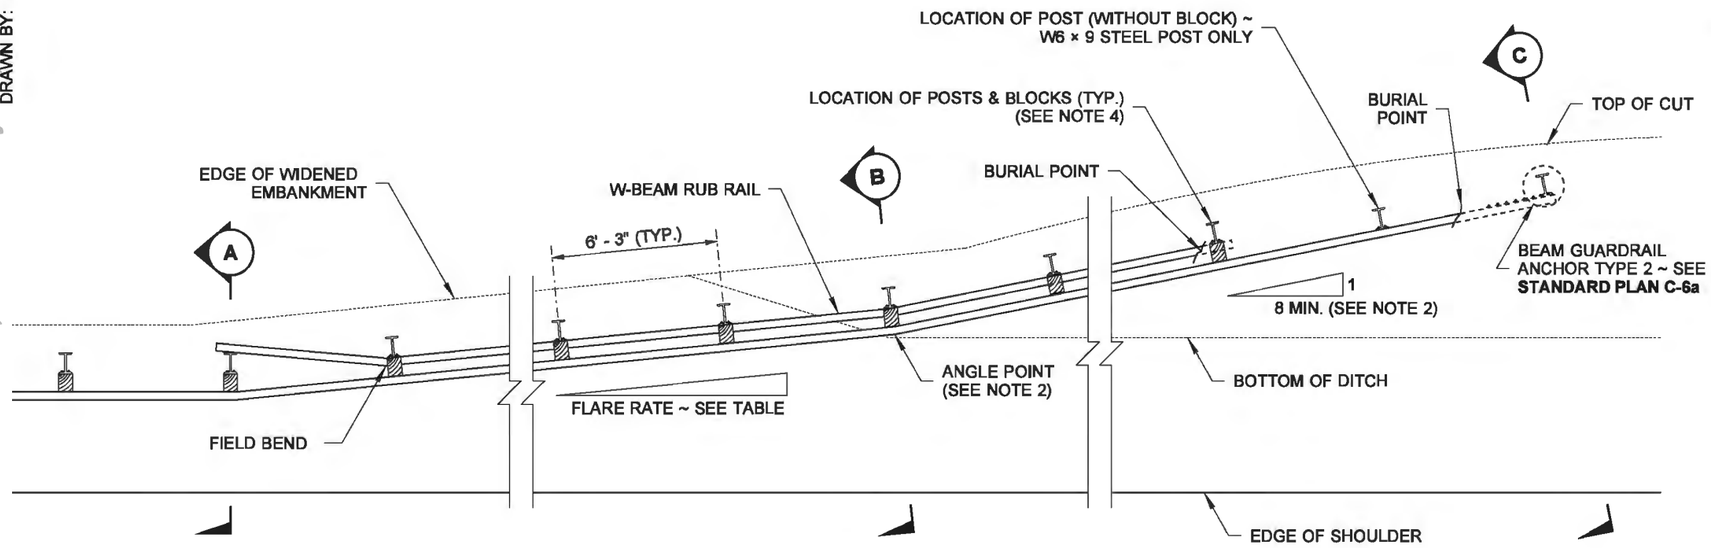

SECTION (C)

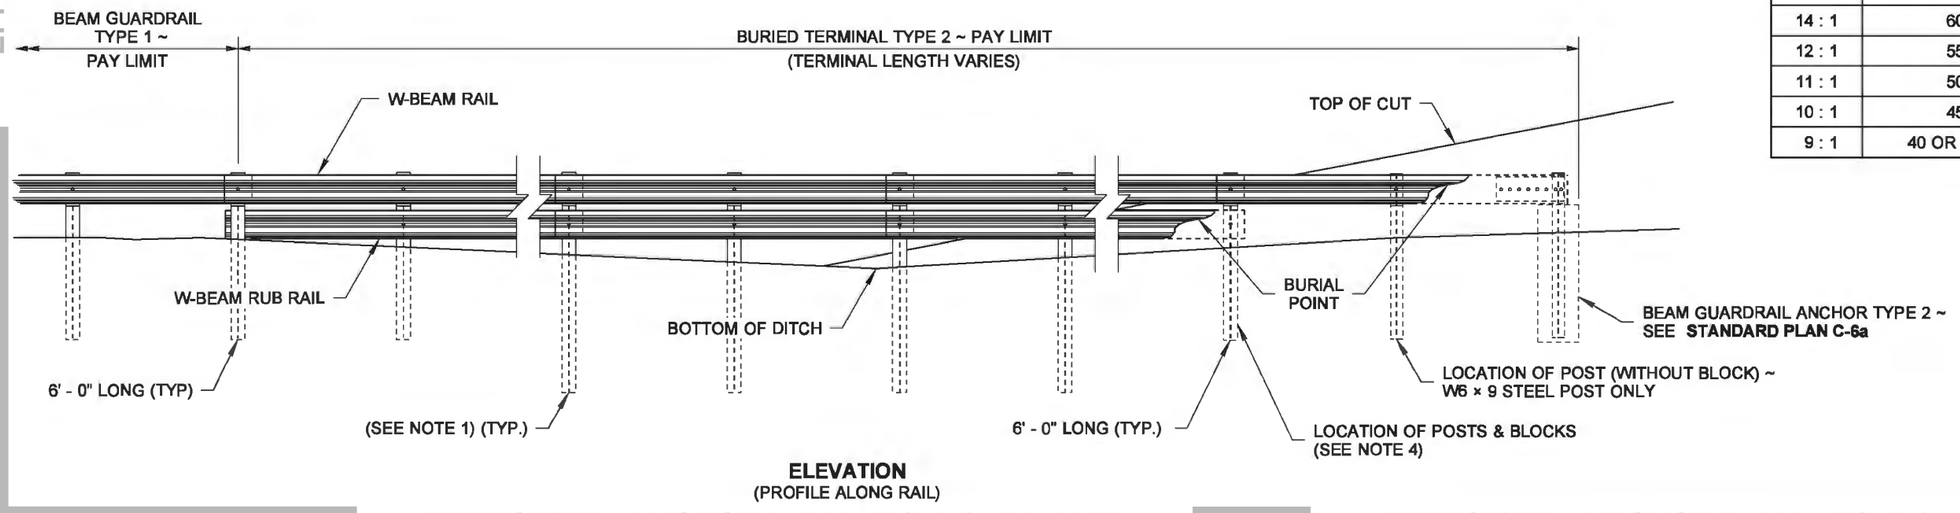

(SEE NOTE 3)

PERSPECTIVE

PLAN

ELEVATION
(PROFILE ALONG RAIL)

NOTES

1. Posts installed on shoulder slopes steeper than 10H : 1V shall be 8' (ft) long.
2. The flare rate of the guardrail may be increased after crossing the ditch bottom to shorten the length of the terminal.
3. Determine the height of the W-Beam at the Anchor (**G**) by first calculating the perpendicular offset distance (**D**) from the edge of shoulder (**S**) to the Anchor (on station). Multiply that distance by 0.1, then subtract the product from the elevation of the same point (**S**) on the edge of shoulder used to obtain the offset distance (at the same station). Add Beam Guardrail design height (27" (in)) to that remainder for a sum that equals the elevation of the top of the W-Beam at the Anchor.

   Refer to SECTION "C":

   $$\text{Elevation}_{G} = (\text{Elevation}_{S} - D\ (0.1)\ ) + 27$$

4. Timber or steel post. Steel post shown.

DRAWN BY: COLBY FLETCHER

NOTES

1. This terminal is FHWA accepted at Test Level Three (TL-3) and may be used for all posted speeds.
2. An SKT-SP-MGS (TL-3) as manufactured by Road Systems, Inc. shall be installed according to manufacturer's recommendations.
3. A reflectorized object marker shall be installed according to manufacturer's recommendations.
4. When snow load post washers and snow load rail washers are required by the Contract, the snow load rail washers shall not be installed within the terminal limits.
5. Terminal shall be installed at a widening, ensuring the end piece is entirely off the shoulder. While this terminal does not require an offset at the end, a flare is recommended. A maximum flare of 25 : 1 or flatter over the length of the terminal is allowed for the SKT-SP-MGS (TL-3), with a maximum offset of 24" (in) over 50' (ft).
6. For terminal details, see WSDOT approved manufacturer's drawings.

NOTES

1. For additional details not shown in this plan, refer to **Standard Plan C-20.10.**
2. This guardrail transition is for connection to a vertical concrete shape or single-slope barrier and cannot be connected directly to a concrete safety shape.
3. Do not bolt nested W-Beam or rubrail W-Beam to posts and blocks on posts 1, 2, 3, and 5. Bolt tapered blocks directly to posts.
4. The rubrail W-Beam can be shop bent to facilitate installation.
5. Posts 1, 2, 3, 4, and 6 require an additional hole to attach tapered blocks and/or rubrail.
6. Posts 1 and 2 are 10 x 10 timber posts, or W6 × 15 steel posts: 7' - 6" long. Posts 3 through 9 are 6 x 8 timber posts, or either W6 × 8.5 or W6 × 9 steel posts: 6' - 0" long.
7. Wood blocks shown. Blocks of alternate material may be used. See **Standard Specifcdation 9-16.3(2).**

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016
EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

DRAWN BY: FERN LIDDELL

NOTES

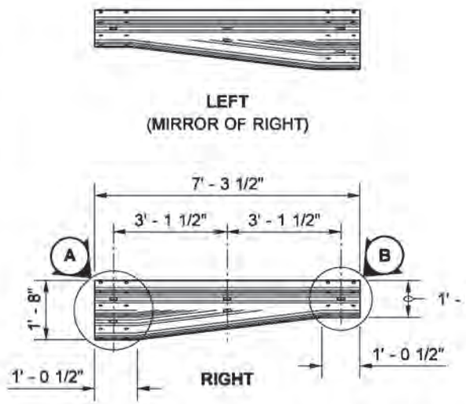

1. This guardrail transition is for connection to a vertical concrete shape, a single slope, or a safety-shape barrier. The toe of the single slope and the safety-shape barrier shall be tapered or the barrier blocked out so that the toe of the barrier does not project past the face of the approach guardrail.
2. See **Standard Plan C-24.10** for details regarding connection to bridge rail or traffic barrier.
3. For details of typical components, see **Standard Plans C-1b** and **C-20.10**.

PLAN VIEW

ELEVATION VIEW ~ PROFILE TAPER

PLAN VIEW ~ ALIGNMENT TAPER
(SEE NOTE 3)

NOTES

1. Refer to **Standard Plans C-1** and **C-1b** for component details for Beam Guardrail Type 1 (not shown on this plan).
2. Refer to **Standard Plan C-20.10** for component details for Beam Guardrail Type 31 (not shown on this plan).
3. Where post offset is constrained, and when the existing shoulder will not be widened and is wider than 4' (ft), the existing shoulder may be reduced up to 4" (in) to accommodate the 12" (in) blockouts of the Beam Guardrail Type 31. See **PLAN VIEW ~ ALIGNMENT TAPER**.
4. Wood blocks shown. Blocks of alternate material may be used. See **Standard Specification 9-16.3(2).**
5. All posts for any standard barrier run shall be of the same type: timber or steel.

PLAN

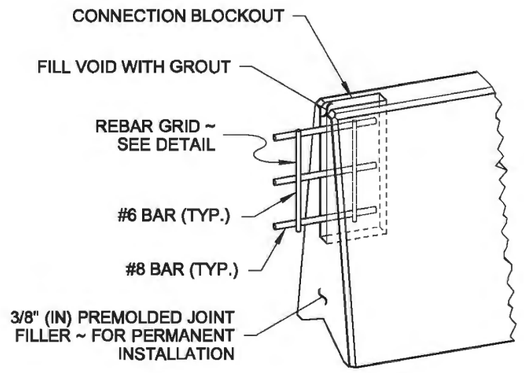

REBAR GRID DETAIL
FOR PERMANENT INSTALLATION

NOTES

1. PERMANENT INSTALLATION requirements: Embed barrier 3" (in) minimum; install 3/8" (in) Premolded Joint Filler between segments; fill the Connection Blockout with grout, centering the Rebar Grid in the blockout before adding grout.
2. TEMPORARY INSTALLATION requirement: Place a Rebar Grid in the Connection Blockout between barrier segments.
3. Installation on a horizontal curve with a radius less than 2,000' (ft) requires a modified end design.
4. For Barrier with a 2' - 10" reveal, see Sheet 2.
   For High-Performance Barrier with a 3' - 6" reveal, see Sheet 3.

DRAWN BY: LISA CYFORD

PLAN

ELEVATION

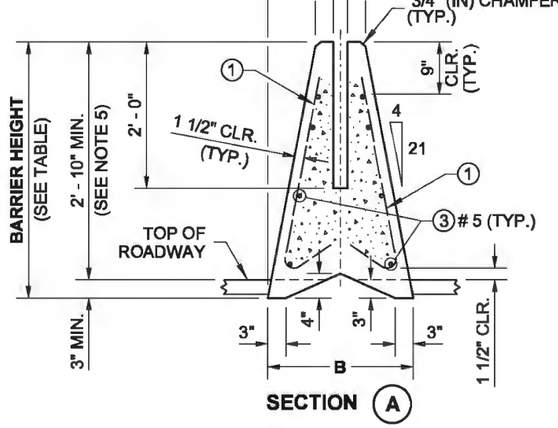

NOTES

1. Reinforcing steel dimensions and clearances are shown for stationary form construction. When slipform construction is used, increase reinforcing steel clearances to the outside surfaces of the barrier to 2 1/2" (in) and adjust the rebar dimensions as required.
2. When connecting between cast-in-place and pre-cast single-slope barrier, provide a Blockout, Rebar Grid, and added rebar, as shown in **Standard Plan C-70.10.**
3. The actual dimensions will vary as the grades change and the barrier transitions in height and width. The dimensions may be interpolated for intermediate barrier heights.
4. For barrier with a 2' - 10" reveal, see Sheet 2. For High-Performance Barrier with a 3' - 6" reveal, see Sheet 3.

PLAN

ELEVATION

NOTE:
STEEL WELDED WIRE REINFORCEMENT DEFORMED FOR CONCRETE MAY BE SUBSTITUTED FOR REINFORCING STEEL IN ACCORDANCE WITH **STANDARD SPECIFICATION 6-10.3**

SECTION (B)

SECTION (A)

REINFORCING STEEL BENDING DIAGRAM

SEE **STD. SPEC. 9-07.1(2)** FOR BENDING DIAMETERS

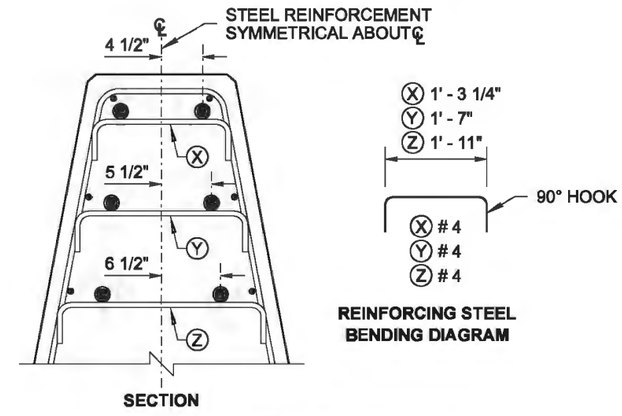

DIMENSION TABLE (SEE NOTE 4)

	BARRIER HEIGHT	A	B	C	D	E	HORIZONTAL BARS (QTY.)
STD.	3' - 6"	8"	2' - 0"	2' - 8"	3	2' - 6"	8
H/P	4' - 0"	9 1/8"	2' - 2 1/4"	2' - 10 1/4"	4	3' - 0"	10

NOTES

1. The Transition Section is used in the configurations shown in **Standard Plans C-85.10** and **C-85.11.**
2. See **Standard Plan C-80.10**, Sheet 1, for EXPANSION JOINT and DUMMY JOINT details. Modify rebar on wider end as shown in EXPANSION JOINT MODIFICATION.
3. Reinforcing steel dimensions and clearances are shown for stationary form construction. When slip-form construction is used, increase reinforcing steel clearances to the outside surfaces of the barrier to 2 1/2" (in) and adjust steel dimensions as required.
4. When **High-Performance Concrete Barrier** is specified in the Contract, use the dimensions given in the H/P row in the DIMENSION TABLE, with a minimum height above roadway of 3' - 6" and a minimum embedment of 3" (in).

NOTES

1. When connecting between cast-in-place and precast Single-Slope Barrier, provide a Connection Blockout and Rebar Grid as shown on **Standard Plan C-70.10.**
2. See the Contract Plans for conduit placement.
3. Grounding Conductor shall be non-insulated #4 AWG stranded copper; provide 3' - 0" min. slack. Clamp steel reinforcing bar with connector suitable for use embedded in concrete.
4. Install Conduit Coupling flush with top of foundation. Do not glue PVC stubout.
5. This plan shall be used for 40' (ft) and 50' (ft) Light Standards with 16' (ft) max. length double mast arms.
6. Concrete shall be Class 4000.
7. This spread footing is designed for an allowable soil bearing pressure of 2500 psf or better.

ANCHOR BOLT LAYOUT DETAIL

NOTES

1. This Barrier/Foundation combination has been designed in accordance with AASHTO LRFD Test Level 4 requirements. The horizontal vehicle impact force at the top of the barrier is taken at 54 kips for Strength and Extreme Limit States, and 10 kips for footing stability (overturning and sliding) in the Service Limit State.
2. When connecting between cast-in-place and precast Single-Slope Barrier, provide a Connection Blockout and Rebar Grid as shown on **Standard Plan C-70.10.**
3. Grounding conductor shall be non-insulated #4 AWG stranded copper; provide 3' - 0" min. slack. Clamp steel reinforcing bar with connector suitable for use embedded in concrete.
4. See the Contract Plans for conduit placement.
5. Install Conduit Coupling flush with top of foundation. Do not glue PVC stubout.
6. This plan shall be used for 40' (ft) and 50' (ft) Light Standards with 16' (ft) max. length double mast arms.
7. Concrete shall be Class 4000.
8. The factored soil bearing resistance shall equal or exceed the following:
   i) Service limit state = 6 ksf
   ii) Strength limit state = 24 ksf
   iii) Extreme limit state = 48 ksf

NOTES

1. All rods "**A**" and Anchor bolts shall be per **ASTM F1554** grade 105.
2. Anchor Bolts, Nuts, Washers and Rod "**A**" shall have a protective coating of either Hot Dipped Galvanizing per **AASHTO M232** for hardware or **AASHTO M111** for Washers and Plates.
3. For intermediate wall heights, use the next higher **H**.
4. Panels shall have at least 3 feet of level ground on each side.
5. The Contract specifies actual foundation requirements for **D1** or **D2** and location of **Western WA** and **Eastern WA.**
6. Maximum panel length shall be 12 feet.
7. Materials shall meet the requirements of **Standard Specification Section 6-12** and **Special Provisions Section 6-12.**

* ONLY ANCHOR BOLT OPTION FOR ROD "**A**" ALLOWED, WEDGE HEAD OPTION NOT ALLOWED

SHAFT REINFORCEMENT SHOWN ACCEPTABLE FOR HEIGHTS "H" ≤ 18' IN WESTERN WASHINGTON AND HEIGHTS "H" ≤ 20' IN EASTERN WASHINGTON

ELEVATION

NOTES

1. Wall to be designated Noise Barrier Wall Type 13SSA, 13SSB, 13SSC or 13SSD. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. Panels shall have at least 3 feet of level ground on each side.
4. Construction joints in the footing shall be spaced at 120 feet maximum.
5. All joints shall be in full contact and sealed.
6. The Contract specifies actual foundation requirements D1 or D2.

NOTES

1. All rods "**A**" and Anchor bolts shall be per **ASTM F1554** grade 105.
2. Anchor Bolts, Nuts, Washers and Rod "**A**" shall have a protective coating of either Hot Dipped Galvanizing per **AASHTO M232** for hardware or **AASHTO M111** for Washers and Plates.
3. For intermediate wall heights, use the next higher "**H**".
4. Panels shall have at least 3 feet of level ground on each side.
5. The Contract specifies actual foundation requirements for **D1** or **D2** and location of **Western WA** or **Eastern WA.**
6. Maximum panel length shall be 12 feet.
7. Materials shall meet the requirements of **Standard Specifications Section 6-12** and **Special Provisions Section 6-12.**
8. Barrier shall only be used in the configuration shown in this Standard Plan. Barrier is precast as shown.
9. For cast-in-place barrier option, continuous barrer can be lengthened to 120' max. 1/2" premolded joint filler on barrier shall be replaced with dummy joints adjacent at panel joints.

NOTES

1. Wall to be designated Noise Barrier Wall Type 17A, 17B, 17C or 17D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. All masonry shall be hollow unit and installed as running bond.
4. All masonry is to be specially inspected.
5. All Concrete Masonry Unit (CMU) cells that have vertical steel reinforcing bars or bond beam units shall be filled with grout.
6. Panels shall have at least 3 feet of level ground on each side.
7. Construction joints in the footing shall be spaced at 120 feet maximum.
8. See "Masonry Wall Finishes and Details" sheets for masonry block finishes, special shapes, sizes and layout.

CMU = CONCRETE MASONRY UNIT

NOTES

1. Wall to be designated Noise Barrier Wall Type 20A, 20B, 20C, or 20D. The Contract specifies actual wall designations.
2. For intermediate wall heights, use the next higher H.
3. All masonry shall be hollow unit and installed as running bond.
4. All masonry is to be specially inspected.
5. All Concrete Masonry Unit (CMU) cells that have vertical steel reinforcing bars or bond beam units shall be filled with grout.
6. Panels shall have at least 3 feet of level ground on each side.
7. See "Masonry Wall Finishes and Details" sheet for masonry block finishes, special shapes, sizes and layouts.
8. The Contract specifies actual foundation requirements D1 or D2.

SECTION AT PILASTER AND SHAFT

1. CONSTRUCTION JOINT WITH ROUGHENED SURFACE
2. DOWEL EMBEDMENT LENGTH = 40 x BAR "B" DIAM.

SECTION DETAIL

KEY NOTES

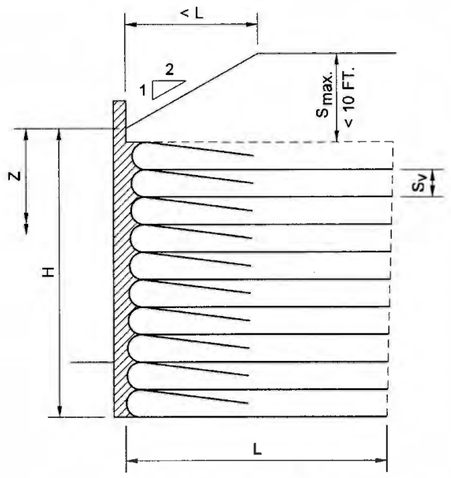

1. GEOTEXTILE FOR UNDERGROUND DRAINAGE CLASS A, MODERATE SURVIVABILITY (ONLY NEEDED IF A GEOGRID IS USED FOR GEOSYNTHETIC REINFORCEMENT)
2. 1' - 0" MIN. GEOTEXTILE OVERLAP, TOP & BOTTOM

GEOSYNTHETIC WALL WITH 2 FT TRAFFIC SURCHARGE

TYPE 1, $A_S \leq 0.51g$

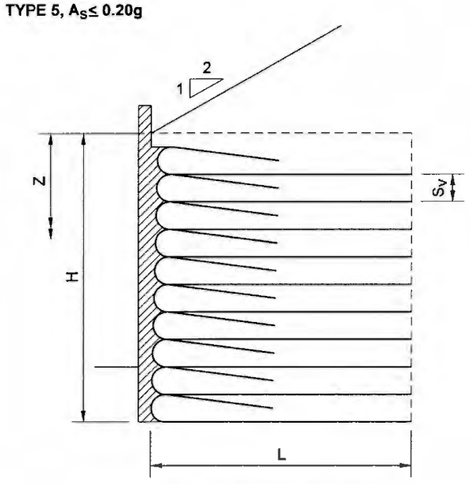

TYPE 5, $A_S \leq 0.20g$

GEOSYNTHETIC WALL

TYPE 2, $A_S \leq 0.51g$

TYPE 6, $A_S \leq 0.20g$

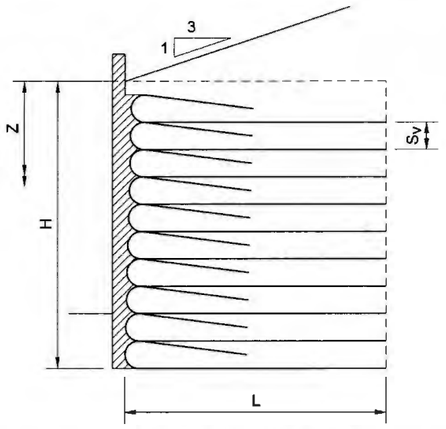

GEOSYNTHETIC WALL

TYPE 4, $A_S \leq 0.51g$

TYPE 8, $A_S \leq 0.20g$

NOTES

1. For the values of "L," see sheet 3, and for the values of "S_V" see sheet 2.
2. For Geosynthetic Wall Construction Sequence, see sheet 4.
3. "A_S" is the peak seismic ground acceleration as defined and applied in the AASHTO LRFD Bridge Design Specifications, Articles 3.10.4.1 and 11.6.5.
4. The long-term geosynthetic design strength "T_{al}" shall be determined in accordance with WSDOT Standard Practice T925. See Qualified Products List (QPL), Appendix "D," for products in which "T_{al}" has been determined. "H" and "Z" are graphically defined. "Z" is the distance from the top of the wall to a geosynthetic layer, and is used to determine "T_{al}" for that layer.
5. "L," the geosynthetic reinforcement length behind the wall face, is graphically defined. The maximum factored bearing stress acts in the vertical direction at the base of the wall. The load factors used are as specified in the AASHTO LRFD Bridge Design Specifications for each specified limit state.
6. Fascia or facing type shall be selected from **Standard Plans D-3.10** or **D-3.11** and called out in the Contract Plans. Region is to coordinate with the Geotechnical Services and Bridge & Structures offices.

GEOSYNTHETIC WALL

TYPE 3, $A_S \leq 0.51g$

TYPE 7, $A_S \leq 0.20g$

NOTE: See Note 5, sheet 1.

PERMANENT GEOSYNTHETIC WALL

STANDARD PLAN D-3.09-00

SHEET 3 OF 4 SHEETS

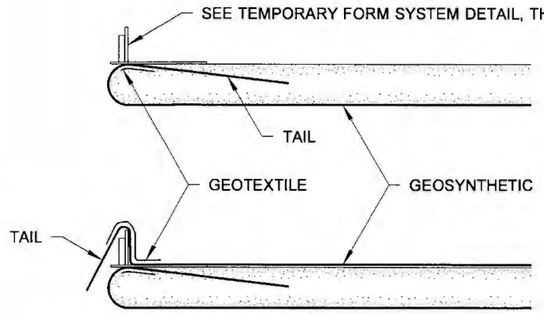

APPROVED FOR PUBLICATION

STATE DESIGN ENGINEER — DATE 5/17/12

Washington State Department of Transportation

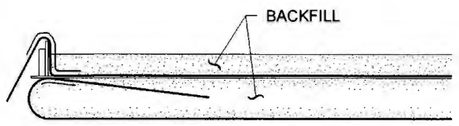

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016
EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

DRAWN BY: BILL BERENS

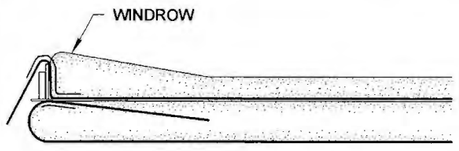

1. SET FORM ON COMPLETED LIFT.

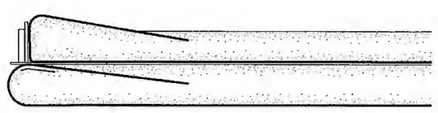

2. UNROLL GEOSYNTHETIC AND POSITION IT SO THAT A 4' - 0" WIDE "TAIL" DRAPES OVER THE FORM. IF A GEOGRID IS USED FOR THE GEOSYNTHETIC REINFORCEMENT, POSITION GEOTEXTILE TO PREVENT BACKFILL FROM SPILLING THROUGH GEOGRID OPENINGS.

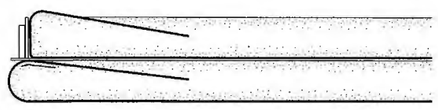

3. PLACE THE BACKFILL UNTIL THE BACKFILL IS UP TO HALF OF THE REQUIRED VERTICAL GEOSYNTHETIC LAYER SPACING.

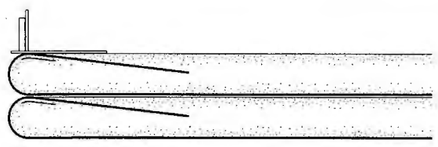

4. PLACE A WINDROW TO SLIGHTLY GREATER THAN FULL LIFT HEIGHT AGAINST THE FORM.

5. PLACE THE GEOSYNTHETIC "TAIL" OVER THE WINDROW AND LOCK INTO PLACE WITH BACKFILL.

6. COMPLETE BACKFILLING UNTIL THE COMPACTED BACKFILL LAYER THICKNESS IS EQUAL TO THE REQUIRED VERTICAL GEOSYNTHETIC LAYER SPACING.

7. THE FORM MAY BE LEFT IN PLACE WHILE CONSTRUCTING THE NEXT LAYER (SEE NOTE 2) OTHERWISE, RESET THE FORM AND REPEAT THE SEQUENCE.

GEOSYNTHETIC WALL CONSTRUCTION SEQUENCE

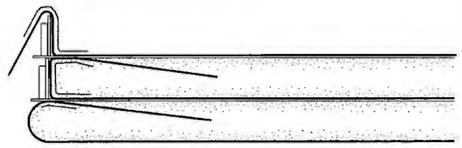

(SECTION VIEW)

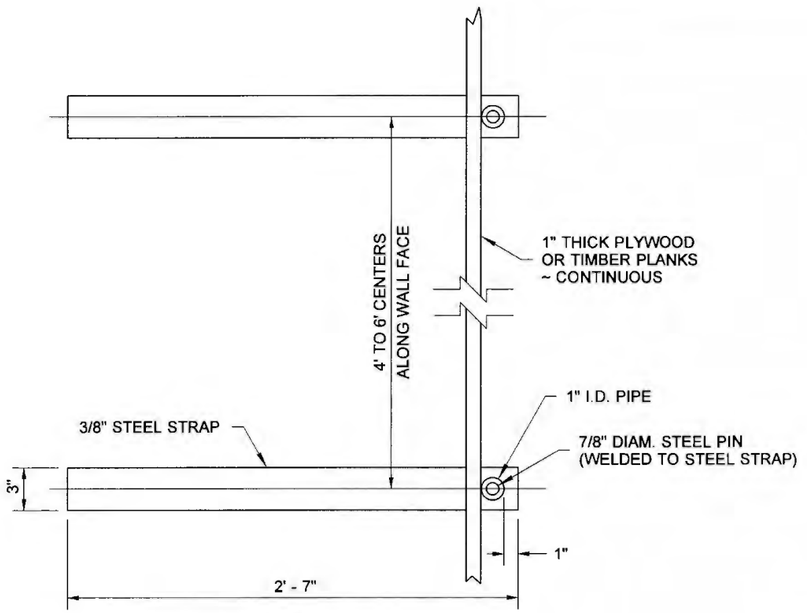

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

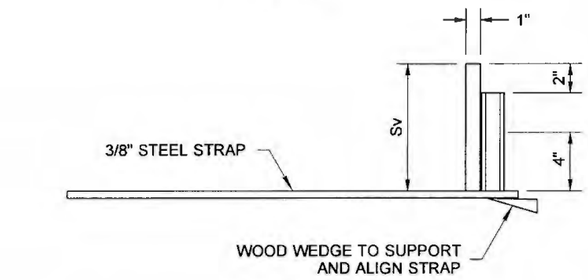

NOTES(SHEET)

1. Use of the Temporary Form System, as detailed in this plan, is optional.
2. To help maintain the wall face batter, leave the form system for the preceding layer in place while constructing the next layer. When the upper layer is complete, remove the form system from the lower layer and reset it for the next layer. See below.

TYPICAL SECTION

PERMANENT GEOSYNTHETIC RETAINING WALL WITH CAST-IN-PLACE CONCRETE FASCIA

KEY NOTES

1. "N" ROWS OF ① #4 (E) DOWEL REINFORCEMENT PLACE BETWEEN GEOSYNTHETIC LAYERS AT 5' - 0" O.C. HORIZONTAL SPACING, SEE TABLE. VERTICAL SPACING BETWEEN ROWS TO BE EQUAL, AS MULTIPLES OF "S_V" ALLOW. ROWS MAY BE STAGGERED. SEE **STD. PLAN D-3.09** FOR "S_V".
2. INCREASE THE COVER AS REQUIRED TO ACCOMMODATE ARCHITECTURAL FEATURES AND FINISH.
3. CONSTRUCTION JOINT WITH ROUGHENED SURFACE.
4. 3" I.D. PVC PIPE FOR WEEP HOLE IN WALL FACING ~ PLACE BETWEEN GEOSYNTHETIC LAYERS APPROX. 9" DEEP AT 12' - 0" HORIZONTAL SPACING. LENGTH TO EXTEND TO OUTER SURFACE OF SPECIFIED WALL. WEEP HOLES SHALL BE KEPT CLEAR OF CONCRETE. SEE **STANDARD PLAN D-3.09,** FOR DETAILS NOT SHOWN.
5. VERTICAL CONSTRUCTION JOINTS IN FASCIA @ 24' - 0" O.C. WITH 1/2 " PREMOLDED JOINT FILLER (SEE **STANDARD PLAN D-10.45**, "SPLIT ELEVATION").
6. VERTICAL CONSTRUCTION JOINTS IN FOOTING @ 120' O.C. MAX. (SEE **STANDARD PLAN D-10.45,** "ELEVATION"). IF THE FOOTING IS STEPPED, PROVIDE 2' - 0" NON-CONTACT LAP SPLICES FOR THE ⑥ #4 BARS AT EACH STEP.
7. COORDINATE WALL FINISH AND CONFIGURATION WITH STATE BRIDGE AND STRUCTURES ARCHITECT PER WSDOT DESIGN MANUAL 730.04(5).
8. THE ④ BARS AND INTERIOR ③ BARS SHALL BE USED ONLY IF THE FACE IS VERTICAL.

SHOTCRETE DETAIL

TYPICAL SECTION

PERMANENT GEOSYNTHETIC RETAINING WALL WITH SHOTCRETE FACING

NOTES

1. All bars shown on this plan shall be ASTM A706 unless otherwise specified in the Contract.
2. Safety cable or fence required when "H" ≥ 10' - 0".
3. All cast-in-place concrete shall be class 4000.

PERMANENT GEOSYNTHETIC RETAINING WALL WITH PRECAST CONCRETE FASCIA PANEL AND TRAFFIC BARRIER

* MAY BE EXTENDED IN LIEU OF CABLE FENCE, 3' - 6" MAX.

TYPICAL SECTION

PERMANENT GEOSYNTHETIC WALL PRECAST CONCRETE FASCIA PANEL

WEEP HOLE ASSEMBLY

NOTES

1. Anchor Rods shall be ASTM F1554 GR. 55
2. All cast-in-place concrete shall be Class 4000.
3. Couplers shall conform to the same **ASTM Standard Specification** as that specified for the nut. Couplers shall be capable of developing 100% of the tensile strength of the anchor rod without evidence of any failure.

KEY NOTES

(1) 7/8" (IN) DIAMETER THREADED ANCHOR ROD **(STANDARD SPECIFICATION SECTION 9.06.5 (4)),** GALVANIZED AFTER FABRICATION IN ACCORDANCE WITH AASHTO M232. ANCHOR RODS SHALL BE THREADED A MINIMUM OF 1' - 0" AT ENDS. PLACE LEVEL AND NORMAL TO WALL. ENCASE ANCHOR RODS WITH PVC SLEEVE. EMBED PVC ENDS INTO GRADE BEAM AND EDGE BEAM.

(2) BACKFILL VOID BEHIND WALL WITH SAND CONFORMING TO **STANDARD SPECIFICATION SECTION 9-03.13(1)** TO 6" (IN) ABOVE FINISHED GRADE ON FRONT FACE OF WALL.

(3) LEVELING PAD, EDGE BEAM, AND GRADE BEAM ARE CAST-IN-PLACE CONCRETE PLACED AT 6H : 1V MAXIMUM SLOPE AND THE VERTICAL CONSTRUCTION JOINTS SHALL BE SPACED AT 120' MAXIMUM.

(4) ONE 3" (IN) DIAMETER WEEP HOLE PER FASCIA PANEL. HORIZONTAL LOCATION AT THE CENTERLINE FASCIA PANEL.

(5) ALL VERTICAL PANEL JOINTS SHALL BE SEALED FOR FULL CONTACT WITH AN APPROVED JOINT SEALANT. SEE "EXPANSION JOINT DETAIL", SHEET 2.

(6) UNLESS OTHERWISE SHOWN, MINIMUM CONCRETE COVER FOR REINFORCEMENT IS 1 1/2". INCREASE COVER AS REQUIRED TO ACCOMMODATE ARCHITECTURAL FEATURES.

(7) IF GRADE BEAM IS NEAR CENTERLINE OF ROADWAY, USE ONE GRADE BEAM AT CENTERLINE FOR FASCIA PANEL ON EITHER SIDE.

(8) CONTACT BRIDGE OFFICE FOR ROADWAY CROSS SLOPES GREATER THAN 0.08'/FT.

(9) COORDINATE WALL FINISH AND CONFIGURATION WITH STATE BRIDGE AND STRUCTURES ARCHITECT PER **WSDOT DESIGN MANUAL 730.04(5)**.

(10) SEE PRECAST FASCIA TABLE, SHEET 2 OF 2.

DRAWN BY: BILL BERENS

TYPICAL SECTION
SHOWN AT GRADE

KEY NOTES

① THE BARRIER GEOMETRY REFERENCE LINE (B.G.R.L.) IS PERPENDICULAR TO THE TRANSVERSE ROADWAY SLOPE (T.R.S.). FOR SUPERELEVATED TRANSVERSE ROADWAY SLOPES, THE B.G.R.L. ON THE LOW SIDE OF THE ROADWAY SHALL BE PERPENDICULAR TO THE T.R.S. UP TO A MAXIMUM OF 8% SUPERELEVATION; THE B.G.R.L. ON THE HIGH SIDE SHALL ALWAYS BE PERPENDICULAR TO THE T.R.S..

② JUNCTION BOX (MOUNT BOX SO COVER IS FLUSH WITH THE BARRIER FACE WITH A 0" TOLERANCE PROTRUDING BEYOND THE BARRIER FACE AND 1/8" RECESSED). USE NEMA 4X JUNCTION BOX WITH STATIONARY-FORMS ~ SEE **STANDARD PLAN J-40.36**. USE NEMA 3R JUNCTION BOX WITH SLIP-FORMS ~ SEE **STANDARD PLAN J-40.37**.

③ 1 1/2" MIN. CONCRETE COVER ~ INCREASE THE COVER AS REQUIRED TO ACCOMMODATE ARCHITECTURAL FEATURES AND FINISH.

④ CONSTRUCTION JOINT WITH ROUGHENED SURFACE.

⑤ THE NOTCH, DETAILED BY THESE DIMENSIONS AND SPECIFICATIONS, IS REQUIRED ONLY IF THE BARRIER IS ON WALL FACING.

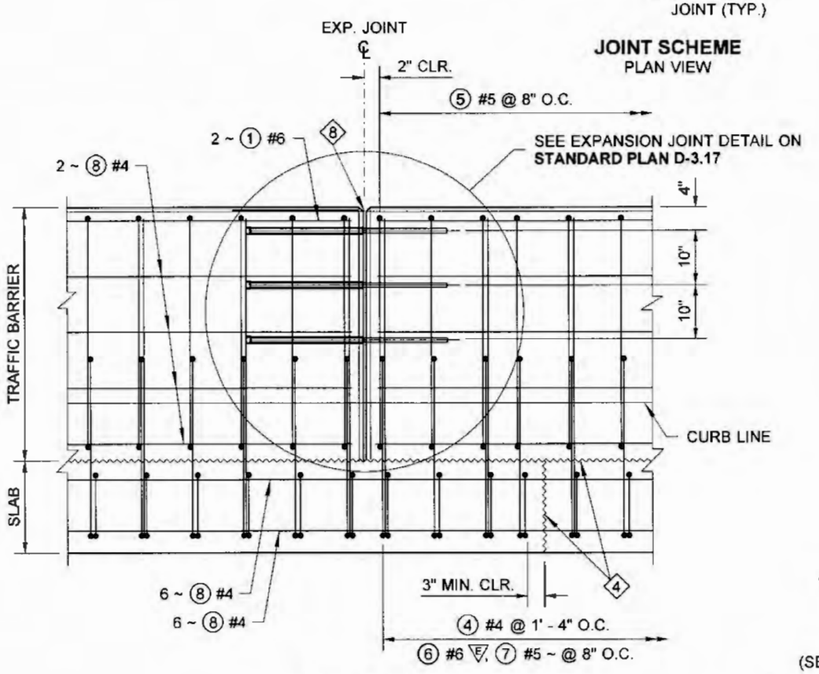

⑥ RUSTICATION ~ SEE RUSTICATION DETAIL

⑦ FOR STRUCTURAL DETAILS BELOW THE MATCH LINE, SEE **STANDARD PLANS D-3.09, D-3.10 OR D-3.11**.

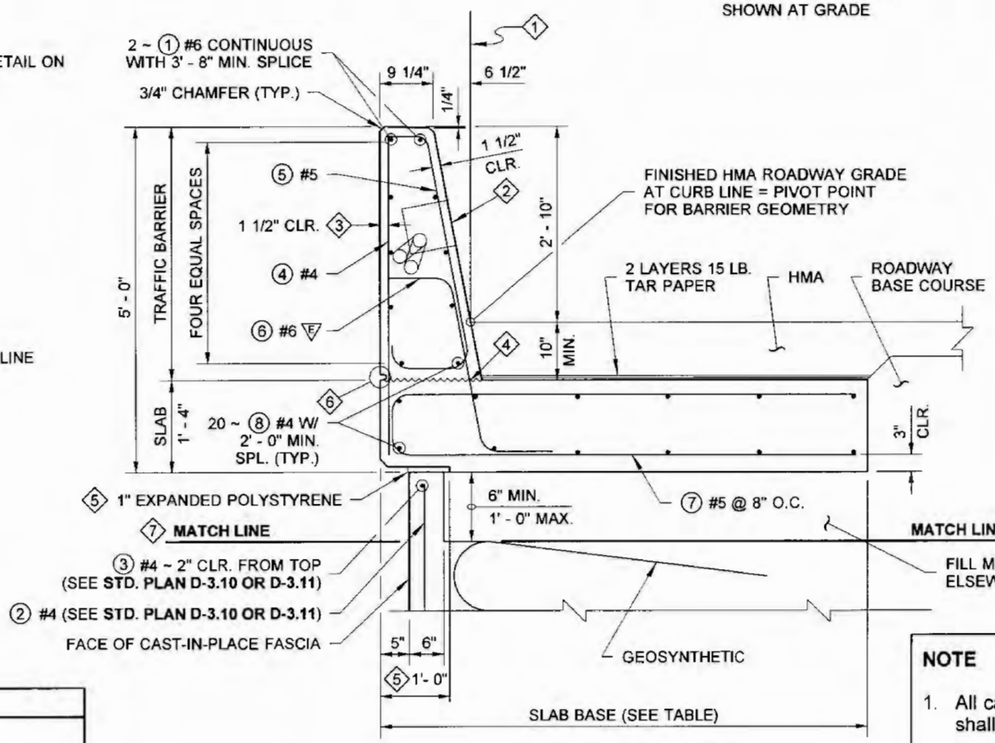

⑧ 1/2" EXPANSION JOINT WITH PREMOLDED JOINT FILLER.

⑨ INSTALL BARRIER DUMMY JOINTS ON TRAFFIC SIDE ONLY WHEN ARCHITECTURAL FEATURES ARE SPECIFIED.

	29' ≤ 35'	11

1. OFFSET ~ SET TOP OF WALL BACK:
   H ≤ 20' ..... OFFSET = 1/2"
   H ≥ 20' ..... OFFSET (inches) = $\frac{H(ft)}{8}$ - 2

2. WHEN THE CONTRACT SPECIFIES CABLE FENCE, BACKFILL AND THE CEMENT CONCRETE GUTTER SHALL BE PLACED 6" MIN. FROM THE TOP OF THE WALL

SPLIT ELEVATION VIEW
(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. When Wall Type 1SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 1SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by (0.003 x H) CY/LF.
5. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
6. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.51 g.
7. If Traffic Barriers are required, See Standard Plans D-15.10, D-15.20 and D-15.30.

REINFORCEMENT NOTES

(1) IF TRAFFIC BARRIER IS USED, ADD 0.100 CY/LF OF CONCRETE CLASS 4000 FOR BARRIER ALTERNATE 1. ADD 0.123 CY/LF OF CONCRETE CLASS 4000 FOR BARRIER ALTERNATE 2. SEE STANDARD PLAN D-15.10

(2) ADD 28 LB/LF OF REINFORCING STEEL FOR BARRIER ALTERNATE 1 OR 19 LB/LF OF REINFORCING STEEL FOR BARRIER ALTERNATE 2. SEE STANDARD PLAN D-15.10

DRAWN BY: BILL BERENS

BAR Q #4		
LOCATION	WALL HEIGHT (H)	QTY.
TOP OF FOOTING	≤ 12'	5
	13' ≤ 16'	6
	17' ≤ 22'	7
	23' ≤ 28'	9
	29' ≤ 35'	11
BOTTOM OF FOOTING	≤ 12'	5
	13' ≤ 16'	6
	17' ≤ 22'	7
	23' ≤ 28'	9
	29' ≤ 35'	11

TYPICAL SECTION

1. OFFSET ~ SET TOP OF WALL BACK:
   H ≤ 20' ..... OFFSET = 1/2"
   H ≥ 20' ..... OFFSET (inches) = $\frac{H(ft)}{8}$ - 2
2. WHEN THE CONTRACT SPECIFIES CABLE FENCE, BACKFILL AND THE CEMENT CONCRETE GUTTER SHALL BE PLACED 6" MIN. FROM THE TOP OF THE WALL

SPLIT ELEVATION VIEW
(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. When Wall Type 2SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 2SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by (0.003 x H) CY/LF.
5. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
6. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.51 g.
7. If Traffic Barriers are required, see Standard Plans D-15.10, D-15.20 and D-15.30.

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. When Wall Type 3SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 3SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by (0.003 x H) CY/LF.
5. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
6. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.51 g.

TYPICAL SECTION

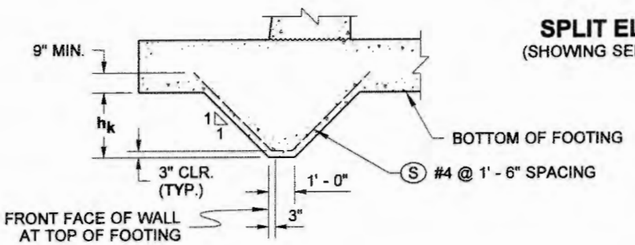

1 OFFSET ~ SET TOP OF WALL BACK:
H ≤ 20' ..... OFFSET = 1/2"
H ≥ 20' ..... OFFSET (inches) = $\frac{H(ft)}{8}$ - 2

WALL TOP DETAIL

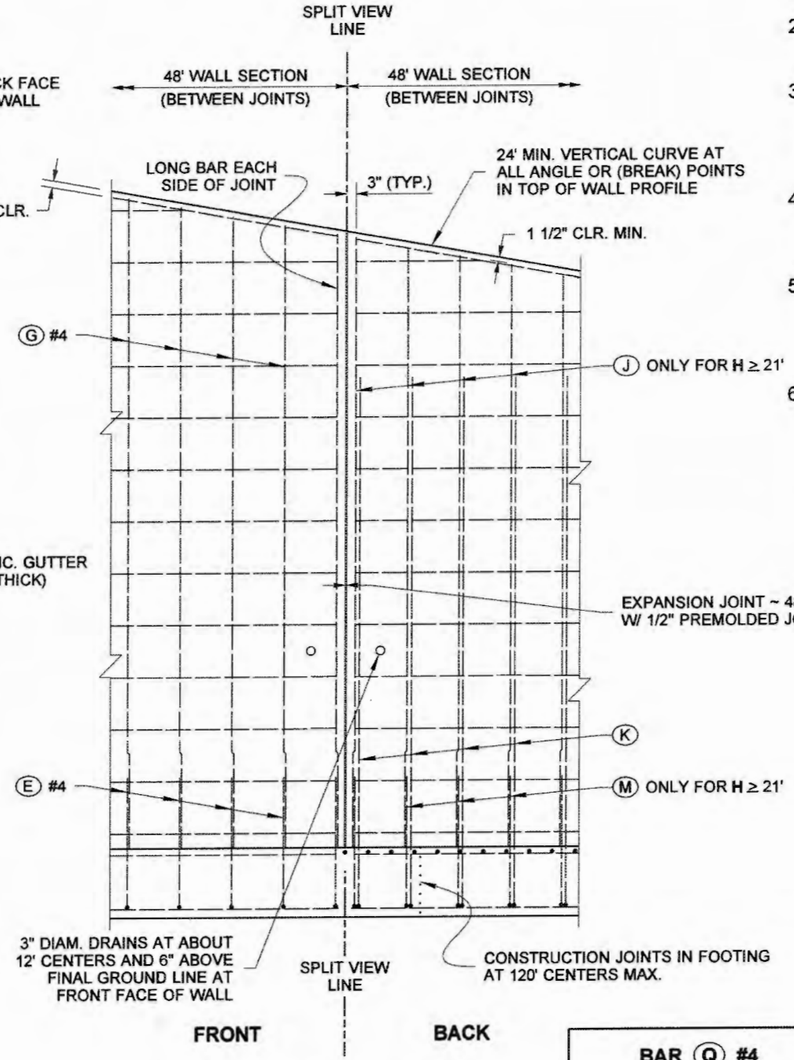

CEMENT CONC. GUTTER DETAIL

KEY DETAIL

REQUIRED ON WALLS WHERE H ≥ 13'

SPLIT ELEVATION VIEW

(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. When Wall Type 4SW (saltwater) is specified, the concrete cover over steel in the front face and the total wall thickness shall be increased by 1".
4. When Wall Type 4SW (saltwater) is specified, concrete in the table column "Material Quantity" shall be increased by (0.003 x H) CY/LF.
5. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
6. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.51 g.

(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
4. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.20 g.

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
4. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.20 g.

TYPICAL SECTION

BAR Q #4		
LOCATION	WALL HEIGHT (H)	QTY.
TOP OF FOOTING	≤ 16'	5
	16' ≤ 23'	7
	23' ≤ 28'	9
	29' ≤ 35'	11
BOTTOM OF FOOTING	≤ 16'	5
	16' ≤ 23'	7
	23' ≤ 28'	9
	29' ≤ 35'	11

1. OFFSET ~ SET TOP OF WALL BACK:
   H ≤ 20' ..... OFFSET = 1/2"
   H ≥ 20' ..... OFFSET (inches) = $\frac{H(ft)}{8} - 2$

2. WHEN THE CONTRACT SPECIFIES CABLE FENCE, BACKFILL AND THE CEMENT CONCRETE GUTTER SHALL BE PLACED 6" MIN. FROM THE TOP OF THE WALL

SPLIT ELEVATION VIEW
(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
4. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.20 g.
5. If Traffic Barriers are required, See Standard Plans D-15.10, D-15.20 and D-15.30.

REINFORCEMENT NOTES

(1) IF TRAFFIC BARRIER IS USED, ADD 0.100 CY/LF OF CONCRETE CLASS 4000 FOR BARRIER ALTERNATE 1. ADD 0.123 CY/LF OF CONCRETE CLASS 4000 FOR BARRIER ALTERNATE 2. SEE STANDARD PLAN D-15.10

(2) ADD 28 LB/LF OF REINFORCING STEEL FOR BARRIER ALTERNATE 1 OR 19 LB/LF OF REINFORCING STEEL FOR BARRIER ALTERNATE 2. SEE STANDARD PLAN D-15.10

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

DRAWN BY: BILL BERENS

BAR Q #4		
LOCATION	WALL HEIGHT (H)	QTY.
TOP OF FOOTING	≤ 12'	5
	13' ≤ 16'	6
	17' ≤ 22'	7
	23' ≤ 28'	9
	29' ≤ 35'	11
BOTTOM OF FOOTING	≤ 12'	5
	13' ≤ 16'	6
	17' ≤ 22'	7
	23' ≤ 28'	9
	29' ≤ 35'	11

TYPICAL SECTION

1. OFFSET ~ SET TOP OF WALL BACK:
   H ≤ 20' ..... OFFSET = 1/2"
   H ≥ 20' ..... OFFSET (inches) = $\frac{H(ft)}{8} - 2$
2. WHEN THE CONTRACT SPECIFIES CABLE FENCE, BACKFILL AND THE CEMENT CONCRETE GUTTER SHALL BE PLACED 6" MIN. FROM THE TOP OF THE WALL

SPLIT ELEVATION VIEW
(SHOWING SEPARATE REBAR LAYERS)

NOTES

1. All concrete shall be Class 4000, except as noted.
2. For backfill requirements, see Standard Plan D-4.
3. Concrete in the 48 foot wall sections shall be placed separately between expansion joints with a minimum 24 hour period before placing concrete in the adjacent section.
4. This wall has been designed in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications 4th Edition 2007 and interims through 2008. The seismic design of these walls has been completed using an effective PGA of 0.20 g.
5. If Traffic Barriers are required, See Standard Plans D-15.10, D-15.20 and D-15.30.

DECK FRAMING PLAN - SINGLE LANE

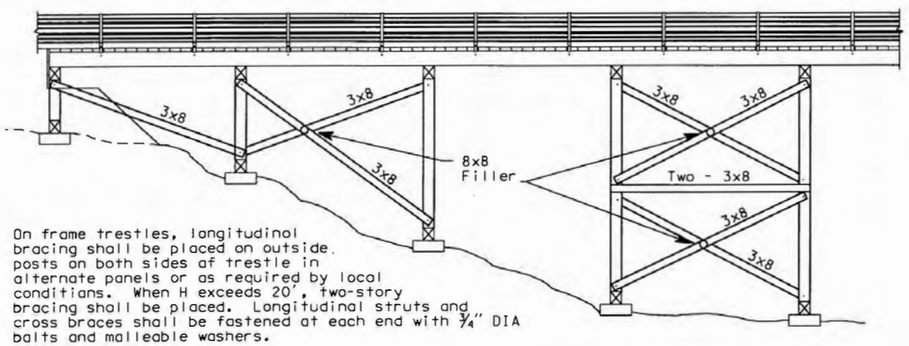

DECK FRAMING PLAN - TWO LANE

On pile trestles, when H exceeds 10' but is less than 20' longitudinal braces shall be placed on outside piles on both sides of trestle in every third panel or as required by local conditions. When H exceeds 20' two-story bracing shall be used. Longitudinal struts and cross braces shall be fastened at each end with 3/4" DIA bolts and malleable washers.

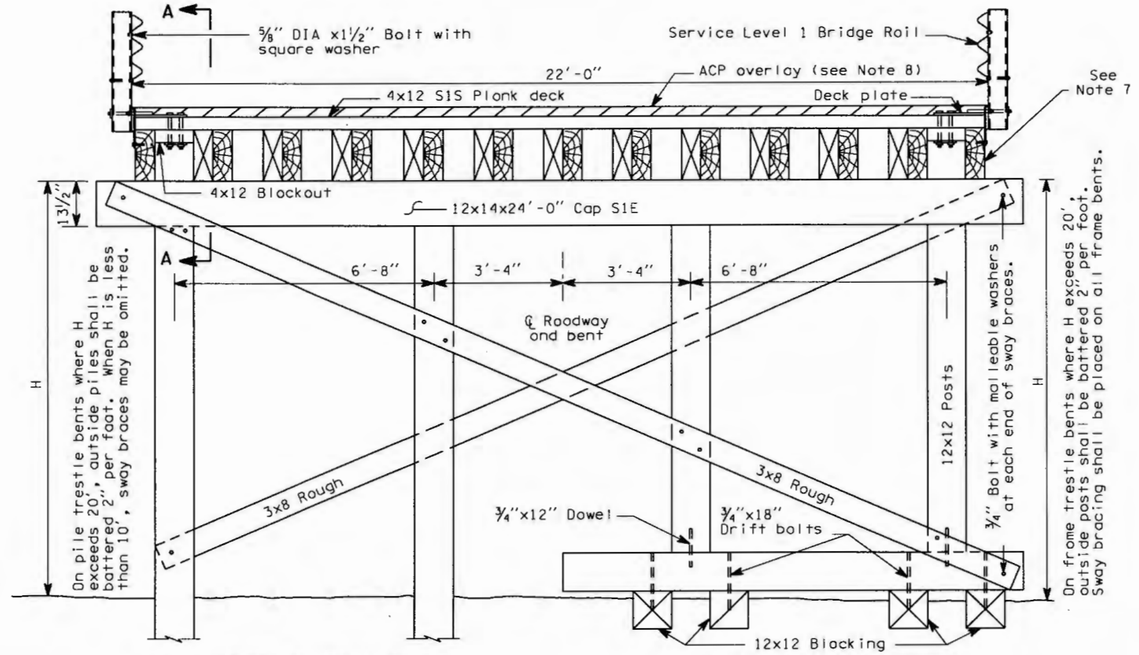

ELEVATION - PILE TRESTLE

On frame trestles, longitudinol bracing shall be placed on outside posts on both sides af trestle in alternate panels or as required by local conditians. When H exceeds 20', two-story bracing shall be placed. Longitudinal struts and cross braces shall be fastened at each end with 3/4" DIA bolts and malleable washers.

SECTION A-A

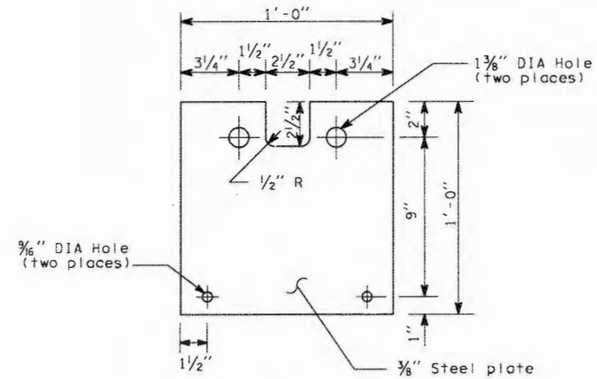

BASE PLATE DETAIL

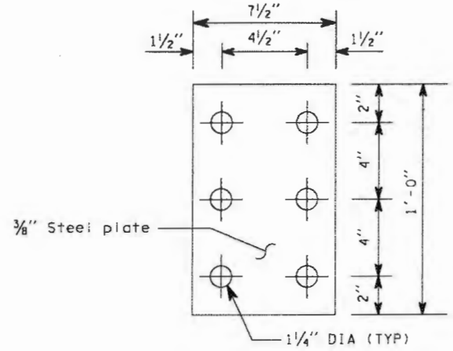

SECTION B-B

NOTES

1. Dimensions and notations for superstructure are typical for both single lane and two lane bridges.
2. All timber and lumber shall be #2 or better and untreated Douglas fir-larch.
3. All piling shall be untreated Douglas fir and shall be driven to develop a minimum load bearing capacity of 15 tons.
4. Blocking for frame bents shall be proportioned to carry a minimum load of 15 tons per post.
5. All hardware shall be black, ungalvanized.
6. Each deck plank shall be nailed to each stringer with two 7" spikes, number 1 or larger.
7. On 17' spans, stringers shall be 6x16 S1E. On 15' spans, stringers shall be 5x16 S1E. Two-lane bridges shall use thirteen lines of stringers, one-lane bridges shall use seven lines of stringers.
8. Overlay thickness must be sufficient to cover bolts.

SEE TABLE FOR WELD DIMENSIONS

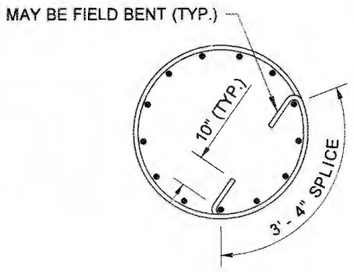

SPIRAL WELDED LAP SPLICE DETAIL

NOTES

1. Place lifting loops at the lifting points shown in the PILE HANDLING DIAGRAM, Standard Plan E-4a, for the case stated in the contract.
2. Spirals shall be spliced either by lapping one full turn and bending the end of the spiral to a 135° seismic hook, by welding, or by the use of a mechanical connector that develops 125% of the minimum yield strenth of the spiral. Welding shall meet the requirements of Standard Specification 6-02.3(24)E.
3. All prestressing strands are 1/2" or 0.6" diameter (d_{ps}), Grade 270, uncoated strands, AASHTO M203, jack to 0.75 Fpu maximum.
4. Strength of concrete shall be 5.0 ksi at release and 7.0 ksi at final.
5. 2 1/2" cover if pile is exposed to salt water.

PILE CUTOFF WITH STRANDS EXTENDING LESS THAN 2' - 0"

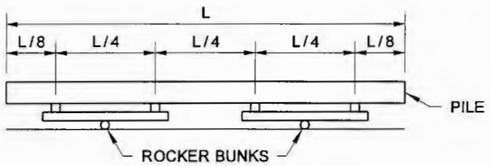

PILE TO PILE-CAP CONNECTIONS

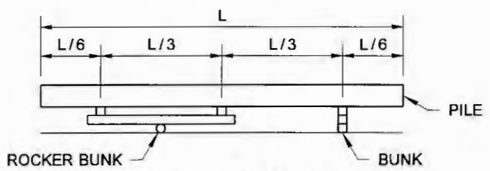

BUILD-UP ON PILE DRIVEN BELOW CUTOFF

PRECAST PILES, HANDLING NOTES

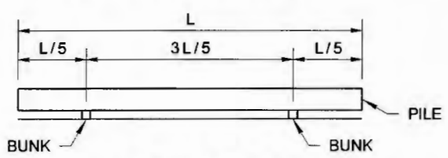

1. For pile lifting Cases 1 and 2, do not allow pile tip to bear on other piling stored in a lower layer.
2. For pile lifting Cases 3 and 4, tilt the pile in the air, do not allow the pile to touch the ground.
3. The minimum angle between the pile and the lifting strap is 60° when the pile is in the horizontal position.
4. When directed to remove a lifting loop, cut it off at the bottom of the recess and patch the recess by filling it with 1:2 mortar, finishing it to the level of the pile face. The patch shall be allowed to cure at least 24 hours prior to driving the pile.
5. The length of the formed or drilled hole shall allow for potential cut-off and full development length of the steel reinforcement. The holes must be roughened and filled with epoxy resin.
6. Expose the spiral reinforcement at the pile head and splice with new spiral in accordance with Standard Plan E-4, Note 2.
7. For handling and bunking, the Prestressed piles shall have at least the minimum number of strands shown on Std Plan E4.
8. Piles stored on the ground should be bunked on level dunnage at no more than 20' on center, with a maximum overhang of 10'.

NOTES

1. Provide a separate Curb Ramp for each marked or unmarked crosswalk. Curb Ramp location shall be placed within the width of the associated crosswalk, or as shown in the Contract Plans.
2. Where "GRADE BREAK" is called out, the entire length of the grade break between the two adjacent surface planes shall be flush.
3. Do not place Gratings, Junction Boxes, Access Covers, or other appurtenances in front of the Curb Ramp or on any part of the Curb Ramp or Landing.
4. See Contract Plans for the curb design specified. See **Standard Plan F-10.12** for Curb, Curb and Gutter, Depressed Curb and Gutter, and Pedestrian Curb details.
5. See **Standard Plan F-30.10** for Cement Concrete Sidewalk Details. See Contract Plans for width and placement of sidewalk.
6. The Bid Item "Cement Concrete Curb Ramp Type __" does not include the adjacent Curb, Curb and Gutter, Depressed Curb and Gutter, Pedestrian Curb, or Sidewalks.
7. The Curb Ramp maximum running slope shall not require the ramp length to exceed 15 feet to avoid chasing the slope indefinitely when connecting to steep grades. When applying the 15-foot max. length, the running slope of the curb ramp shall be as flat as feasible.
8. Curb Ramp, Landing, and Flares shall receive broom finish. See **Standard Specifications 8-14.**
9. Pedestrian Curb may be omitted if the ground surface at the back of the Curb Ramp and/or Landing will be at the same elevation as the Curb Ramp or Landing and there will be no material to retain.

TRUNCATED DOME DETAILS

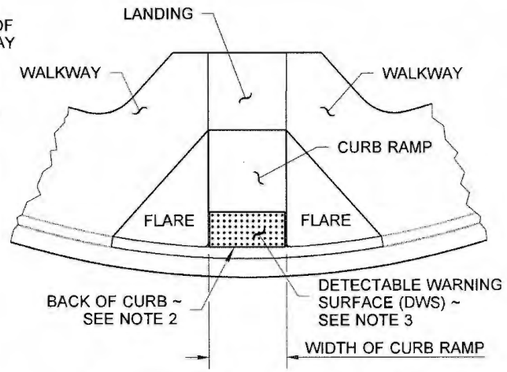

DETECTABLE WARNING SURFACE DETAIL

NOTES

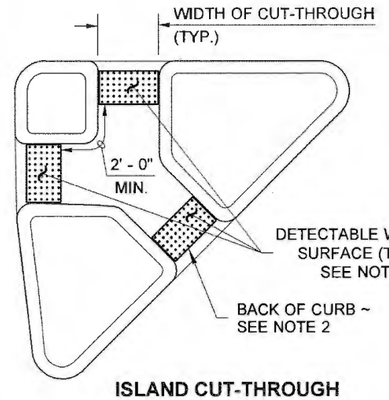

1. The Detectable Warning Surface (DWS) shall extend the full width of the curb ramp (exclusive of flares) or the landing.
2. The Detectable Warning Surface shall be placed at the back of curb, and need not follow the radius.
3. The rows of truncated domes shall be aligned to be perpendicular to the grade break at the back of curb.
4. The rows of truncated domes shall be aligned to be parallel to the direction of travel.
5. If curb and gutter are not present, such as a shared-use path connection, the Detectable Warning Surface shall be placed at the pavement edge.
6. See **Standard Plans** for sidewalk and curb ramp details.
7. If a curb ramp is required, the location of the Detectable Warning Surface must be at the bottom of the ramp and within the required distance from the rail.
8. When the grade break between the curb ramp and the landing is less than or equal to 5 ft. from the back of curb at all points, place the Detectable Warning Surface on the bottom of the curb ramp.

SECTION (C)

NOTES

1. When the driveway width exceeds 15' (ft), construct a full depth expansion joint with 3/8" (in) joint filler along the driveway centerline. See **Standard Plan F-30.10.** Construct expansion joints parallel with the centerline as required at 15' (ft) maximum spacing when driveway widths exceed 30' (ft).
2. See **Standard Plan F-30.10** for sidewalk details.
3. Curb and gutter shown; see the Contract Plans for the curb design specified. See **Standard Plan F-10.12** for Curb Details.
4. Avoid placing drainage structures, junction boxes or other obstructions in front of driveway entrances.
5. Where "GRADE BREAK" is called out, the entire length of the line between the two adjacent surface planes shall be flush.
6. The curb ramp maximum running slope shall not require the ramp length to exceed 15' (ft) to avoid chasing the slope indefinitely when connecting to steep grades. When applying the 15' (ft) max. length, the running slope of the curb ramp shall be as flat as feasable.
7. Beyond limits shown. Pay item does not include driveway. See Contract Plans.

TYPICAL INSTALLATION FOR SINGLE-FACED SIGNS

TYPICAL INSTALLATION FOR DOUBLE-FACED SIGNS

NOTES

1. Attach the Milepost Sign Panel to a timber sign post using two 3/8" diameter lag bolts, with washers; see Standard Plan G-22.10. For post and attachment details on steel sign posts, see Standard Plan G-24.50, Type ST-1.
2. Provide Supplemental Plaques and install on Mileposts where indicated in the Contract.
3. See the Contract for the width of the Single-Faced Milepost Signs required (10" or 12").
4. For lateral installations behind traffic barrier, 6" high curbs, and ditches, see Standard Plan G-20.10.
5. Install at the locations shown in the Contract. Installation may be moved 50 feet or less (longitudinally) before or after the contract location if obstructions are encountered, or to utilize the post of another sign. Mileposts that cannot be placed within this degree of accuracy shall be omitted entirely.

SIGN BRACE ON TIMBER POST

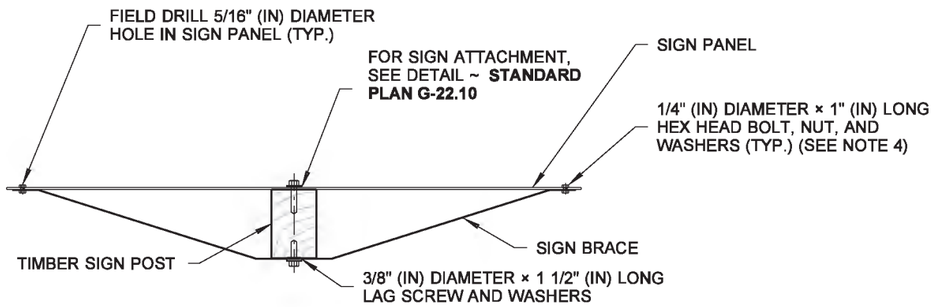

SIGN BRACE ON STEEL PIPE

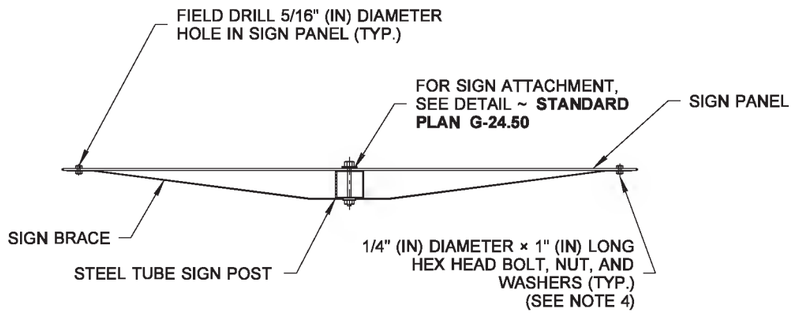

SIGN BRACE ON STEEL TUBE

NOTES

1. Mounting brackets with steel straps shall be a stainless steel band and buckle system product or an approved equal. Mounting brackets shall be one bolt, flared leg; steel straps shall be 3/4" (in) wide and 0.030" (in) thick.
2. Sign braces are required for sign widths of 48" (in) or greater. For sign widths of 36" (in), the sign braces are only installed when specified in the contract.
3. Sign braces are typically necessary on large sign panels that are exposed to high winds, traffic generated wind buffeting, or when snow thrown from plows might impact the sign.
4. A nylon washer shall be placed between the sign and the steel washer when the sign face has Type III, IV,VIII or IX sheeting.
5. Signs 48" (in) or greater can be pinned together, back to back.
6. For signs installed back to back on a single post, no bracing is required.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

DRAWN BY: FERN LIDDELL

POST SELECTION		
TOTAL SIGN AREA ◇1 Σ (X TIMES Y) (FT^2)	POST SIZE	
	O.D.	WALL
50 OR LESS	18"	0.438"
50+ to 100	18"	0.438"
100+ to 150	24"	0.375"
150+ to 200	24"	0.375"
200+ to 250	24"	0.375"
250+ to 300	24"	0.375"
300+ to 350	24"	0.438"
350+ to 400	24"	0.500"

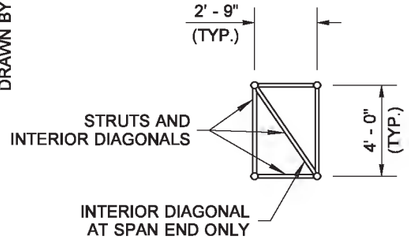

SINGLE OR DOUBLE CANTILEVER

DOUBLE CANTILEVER ONLY

◇1 SUM OF SIGN FOR DOUBLE CANTILEVER

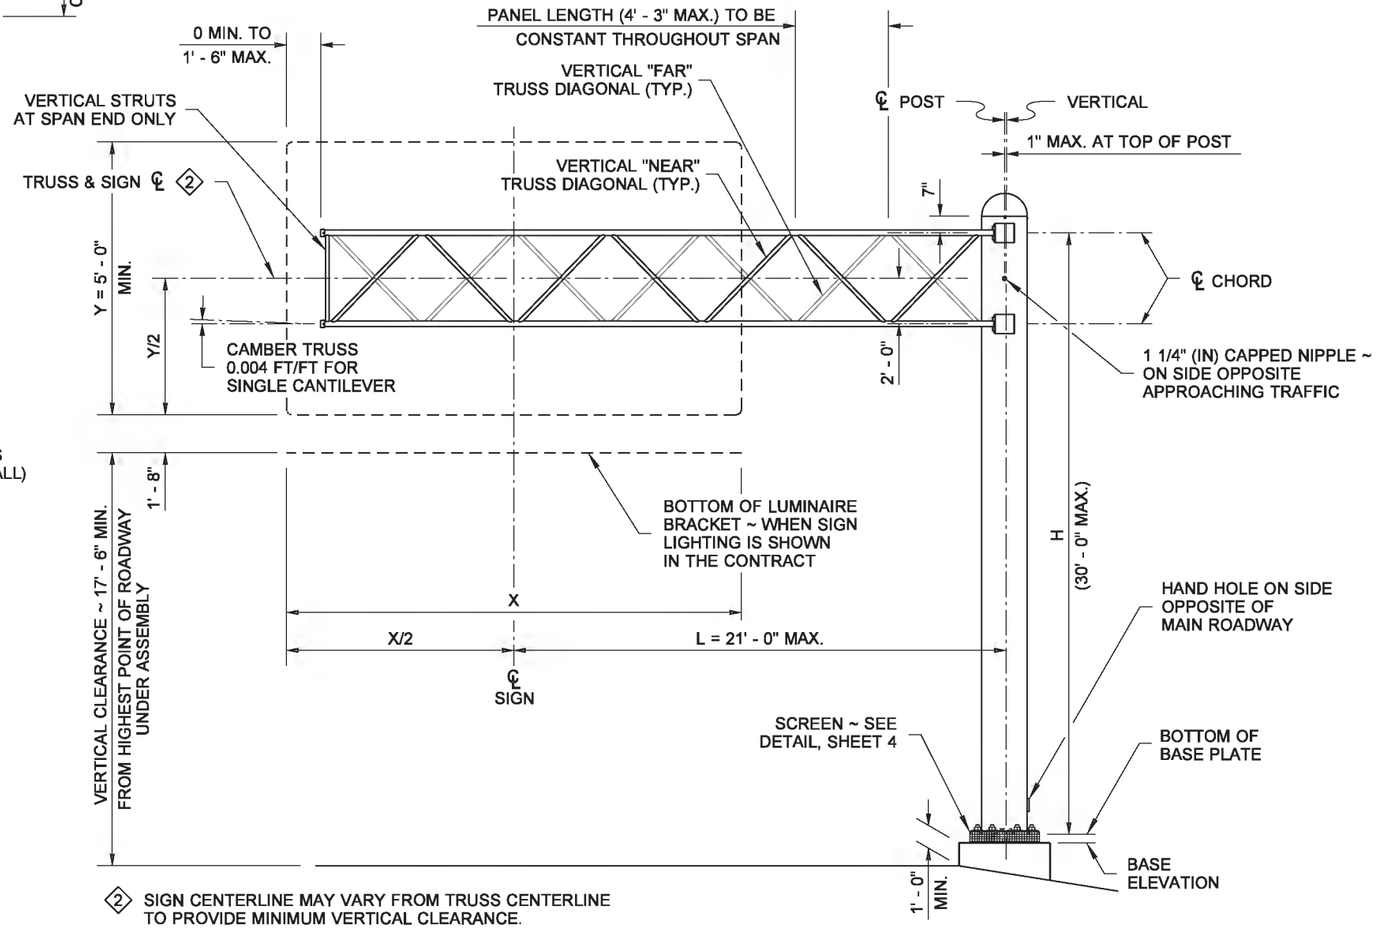

TOP

END

ALL TRUSS DIAGONALS AND STRUTS SHALL BE 1 1/2" (IN) PIPE (0.145" (IN) WALL)

◇2 SIGN CENTERLINE MAY VARY FROM TRUSS CENTERLINE TO PROVIDE MINIMUM VERTICAL CLEARANCE.

ELEVATION

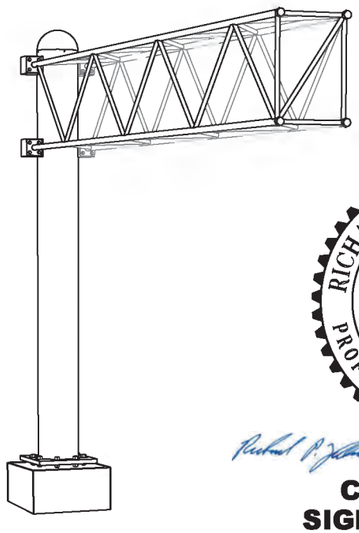

SINGLE CANTILEVER SIGN STRUCTURE

MATERIAL SPECIFICATIONS	
PIPE (CHORDS, DIAGONALS, STRUTS AND POSTS)	ASTM A 36 OR ASTM A 53 GRADE B, TYPE E OR S, OR A 500 GRADE B
PLATES	ASTM A 36
SHAPES	ASTM A 36 ASTM A 992
BOLTS, NUTS, & WASHERS	STD. SPEC. 9-06.5(3)
PIPE, PLATE & SHAPE GALVANIZING	AASHTO M 111
FASTENER GALVANIZING	AASHTO M 232

CHORD SELECTION		
SIGN AREA (X TIMES Y) (FT^2)	CHORD SIZE	
	NOM. DIAM.	WALL
50 OR LESS	2"	0.154"
50+ TO 100	2"	0.218"
100+ TO 150	2 1/2"	0.203"
150+ TO 200	3"	0.216"

NOTES

1. Vertical and horizontal clearance requirements shall be as shown on the Contract Plans.
2. No post splices permitted in lower third of height, nor closer than 3' - 0" to bottom chord, except as otherwise noted. No chord shop splices permitted in first two-thirds of the span, except as otherwise noted. A maximum of two splices are permitted in the post. For post or chord shop splice details, see **Standard Plan G-70.10**.
3. The back-up plates or rings for all full penetration welds shall be welded continuously to the joined pieces. This can be done by either a continuous fillet weld on the back side of the piece, or by a continuous weld in the root of the full penetration weld.
4. All bolt holes shall be drilled, and the diameter shall be 1/16" (in) larger than the nominal bolt diameter, except as noted.
5. The design and analysis of the structures has been done in accordance with AASHTO Standard Specification for Structural Supports for Highway Signs, Luminaires and Traffic Signals Dated 2001, using 90 MPH wind velocity and fatigue category - I.
6. Adjust post alignment in plane normal to roadway centerline by means of leveling nuts located below base plate to maintain upward slope in cantilever arm(s). Tighten anchor nuts above base plate in accordance with **Standard Specification 6-03.3(33).**
7. Variable Message Signs (VMS) exceeding 700 lbs. and/or 200 sq. ft. shall not be installed on cantilever structure.
8. For electrical requirements, see **Standard Plan J-75.45.**

DETAIL (D)

NOTES

1. Refer to Contract Plans for Monotube Beam Bracket element sizes, dimensions, and weld symbols.
2. See **Standard Plan G-90.10** for Sign Bracing and Lighting Placement details.
3. Galvanize all non-stainless steel parts.
4. See **Standard Plan G-90.40** for Sign Lighting details.
5. Hand holes shall be installed at the time of fabrication. Only additional conduits for lighting accommodations to previously non-illuminated structures may be installed in field as long as the proper repairs are made to the structure. For details not shown, see **Standard Plan J-75.40.**
6. For VMS mounting, the Contractor may substitute W6 × 12 steel or W8 × 13 steel sections for the Vertical Brace W4 × 13 steel.
7. 3' - 0" max. Vertical Brace and Monotube Beam Bracket spacing for walk-in cabinet Type VMS installation.
8. An acceptable alternative to a Locknut with nylon insert shall be as follows:
   - Nylock Blue Nylon Torque-Patch
   - Nylock Precote 30
   - ND Patch 360 Ring Patch

   All products shall be applied the full length of the bolt threads with 360 degrees coverage.

* ATTACH ON BOTH SIDES OF WIDE FLANGE STEEL POST.

STEEL POST ASSEMBLY DETAIL

ALTERNATE ANTI-TWIST PLATE DESIGN

NOTES

1. A socket and wedge anchoring system that meets the NCHRP 350 crash test criteria may be substituted in lieu of the anti-twist plate designs shown. Anti-twist plates are not required for wood post installations.
2. The platform design shown on this plan features slots that accommodate several types of mailbox supports; only those slots necessary for assembling the type being installed are required. An adjustable platform may be used in lieu of this design, but it must fit the bracket design shown on this plan. Brackets are required for all single-post installations. Field drilling may be necessary.
3. Center the mailbox on the platform to ensure space for the mailbox door to open and to allow space for installing the fasteners (see ALIGNMENT DETAIL, Sheet 2). Spacing of mailbox mounting holes varies among manufacturers. Attachment of the mailbox to the platform may require drilling additional holes through the mailbox to fit the platform.
4. Attach a newspaper box to a steel post with two 1 7/8" Muffler Clamps spaced 4" apart. Field drill 7/16" holes in the newspaper box to fit. Use 2 1/2" × 1/4" lag bolts to attach newspaper boxes to wood posts. Newspaper boxes must not extend beyond the front of the mailbox when the mailbox door is closed.
5. A Type 2 Support **(Standard Plan H-70.20)** is required when 2 or more mailboxes are to be installed on one support.

NOTES

1. The anchoring system shall meet NCHRP 350 crash test criteria. Use a socket and wedge system or the anchoring system supplied by or recommended by the Type 2 Support manufacturer.
2. A maximum of five mailboxes may be installed on a Type 2 Support.
3. The Platform design shown in this plan is detailed in the PLATFORM DETAIL, **Standard Plan H-70.10, Sheet 2.** The design features slots that accomodate several types of mailbox supports; only those slots necessary for assembling the type being installed are required. An adjustable platform may be used in lieu of this platform design. Adjustable platforms must fit the 1 7/8" M-Clamp.
4. Center the mailbox on the platform to ensure space for the mailbox door to open and to allow space for installing the fasteners (see ALIGNMENT DETAIL). Spacing of mailbox mounting holes varies among manufacturers. Attachment of the mailbox to the platform may require drilling additional holes through the mailbox to fit the platform.
5. Attach a newspaper box to a Type 2 Support with two 1 7/8" Muffler Clamps spaced 4" apart. Field drill 7/16" holes in the newspaper box to fit. Newspaper boxes must not extend beyond the front of the mailbox when the mailbox door is closed.

NOTES

1. The insert pipe is 1" nominal diameter, Schedule 40 steel pipe, as indicated; all other pipe shown on this plan is 1 1/4" nominal diameter, Schedule 40 steel pipe. All pipe, couplings, and elbows shall be galvanized in accordance with ASTM A 153.
2. The vertical support may be cast in a concrete foundation, or bolted to a U-channel post, (see PLACEMENT DETAIL, Sheet 2). Avoid placing the vertical support in the flow line of a ditch.
3. The pipe angles required in this design may be achieved by using pipe fittings or by bending the pipes. See DETAIL "A," Sheet 2.
4. Coat the 1" diam. pipe with grease (petroleum) before sliding the 1 1/4" diam. pipe (cantilever arm) onto it, to aid rotation and to guard against corrosion.
5. The Platform design shown in this plan is detailed in the PLATFORM DETAIL, **Standard Plan H-70.10, Sheet 2.** The design features slots that accommodate several types of mailbox supports; only those slots necessary for assembling the type being installed are required.
6. Match the edge of the mailbox platform to the end of the horizontal pipe mount. Center the mailbox on the platform to ensure space for the mailbox door to open and to allow space for installing the fasteners. Spacing of mailbox mounting holes varies among manufacturers. Attachment of the mailbox to the platform may require drilling additional holes through the mailbox to fit the platform, (see ALIGNMENT DETAIL).
7. Attach a newspaper box to the pipe with two 1 3/4" muffler clamps spaced 4" apart. Newspaper boxes must not extend beyond the front of the mailbox when the mailbox door is closed.

BIODEGRADABLE CHECK DAM

BIODEGRADABLE CHECK DAM NOTE

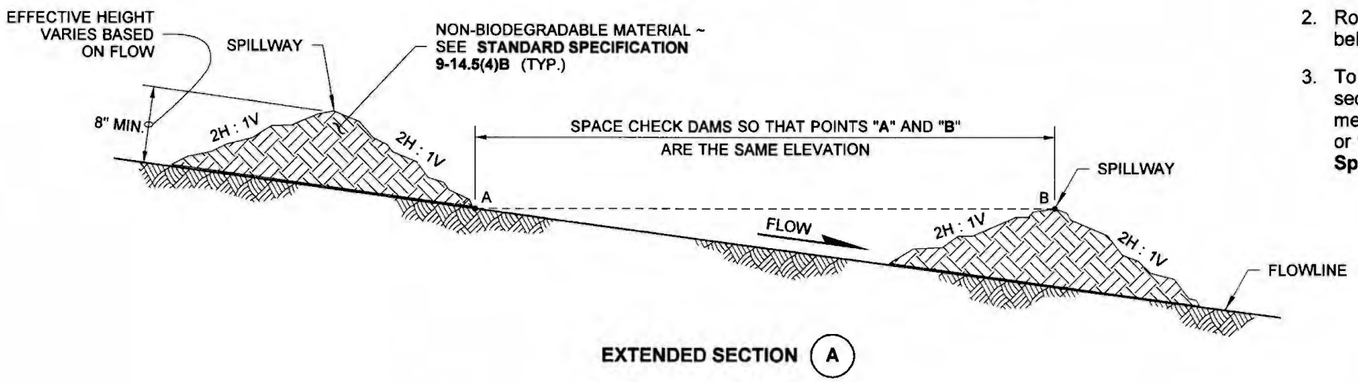

1. Biodegradable Check Dams may need additional or modified staking to prevent undercutting or scouring.

GENERAL NOTES

1. Check Dams shall meet the requirements of **Standard Specifications 8-01.3(6) and 9-14.5(4).**
2. In channels, install the sloped ends of the Check Dam a minimum of 8" higher than the spillway to ensure water flows over the dam and not around it.
3. Perform maintenance in accordance with **Standard Specification 8-01.3(15).**
4. Remove Check Dams in accordance with **Standard Specification 8-01.3(16).**

ELEVATION

EXTENDED SECTION (A)

NON-BIODEGRADABLE CHECK DAM

NON-BIODEGRADABLE CHECK DAM NOTES

1. Non-Biodegradable Manufactured Check Dam devices approved for use under **Standard Specification 9-14.5(4)** shall be installed per manufacturer's recommendations and shall perform in accordance with **Standard Specification 8-01.3(6).**
2. Rock Check Dams shall be placed outside of the clear zone or behind traffic barrier.
3. To ensure adequate damming time, Rock Check Dams used as sediment control may need to be enhanced with plastic that meets the requirements of **Standard Specification 9-14.5(3)** or fabric that meets the geotextile requirements of **Standard Specification 9-33.2(1), Table 6.**

DRAWN BY: LISA CYFORD

INITIAL ANCHOR ~ DETAIL (B)

ISOMETRIC VIEW

INSTALLATION STEPS:

1. Prepare smooth slope.
2. Amend soil and seed, as specified.
3. Dig anchor trench. Set aside native soil removed from trench.
4. Secure blanket in anchor trench, staking or stapling blanket as shown.
5. Replace native soil previously removed from trench.
6. Roll blanket down the slope in a controlled manner, taking care to remove excess slack, and taking care not to stretch blanket.
7. Stake or staple blanket as shown so there are no gaps between the blanket and the soil. Staple while unrolling blanket to minimize walking on blanket.

NOTES

1. More than the minimum of one fastener per square yard may be required due to conditions such as blanket composition, soil type, surface uniformity, and slope steepness.
2. See **Standard Specification 8-01.3(3)** and **9-14.5)2).**
3. Use manufacturer's requirements. When manufacturer's requirements are not provided, use installation requirements shown on Standard Plans.
4. Additional staples may be required on slopes greater than 3H : 1V.

CHANNEL INSTALLATION ~ SECTION (A)

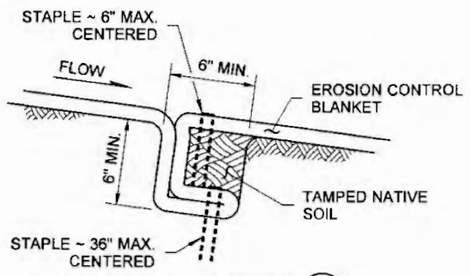

LONGITUDINAL ANCHOR DETAIL

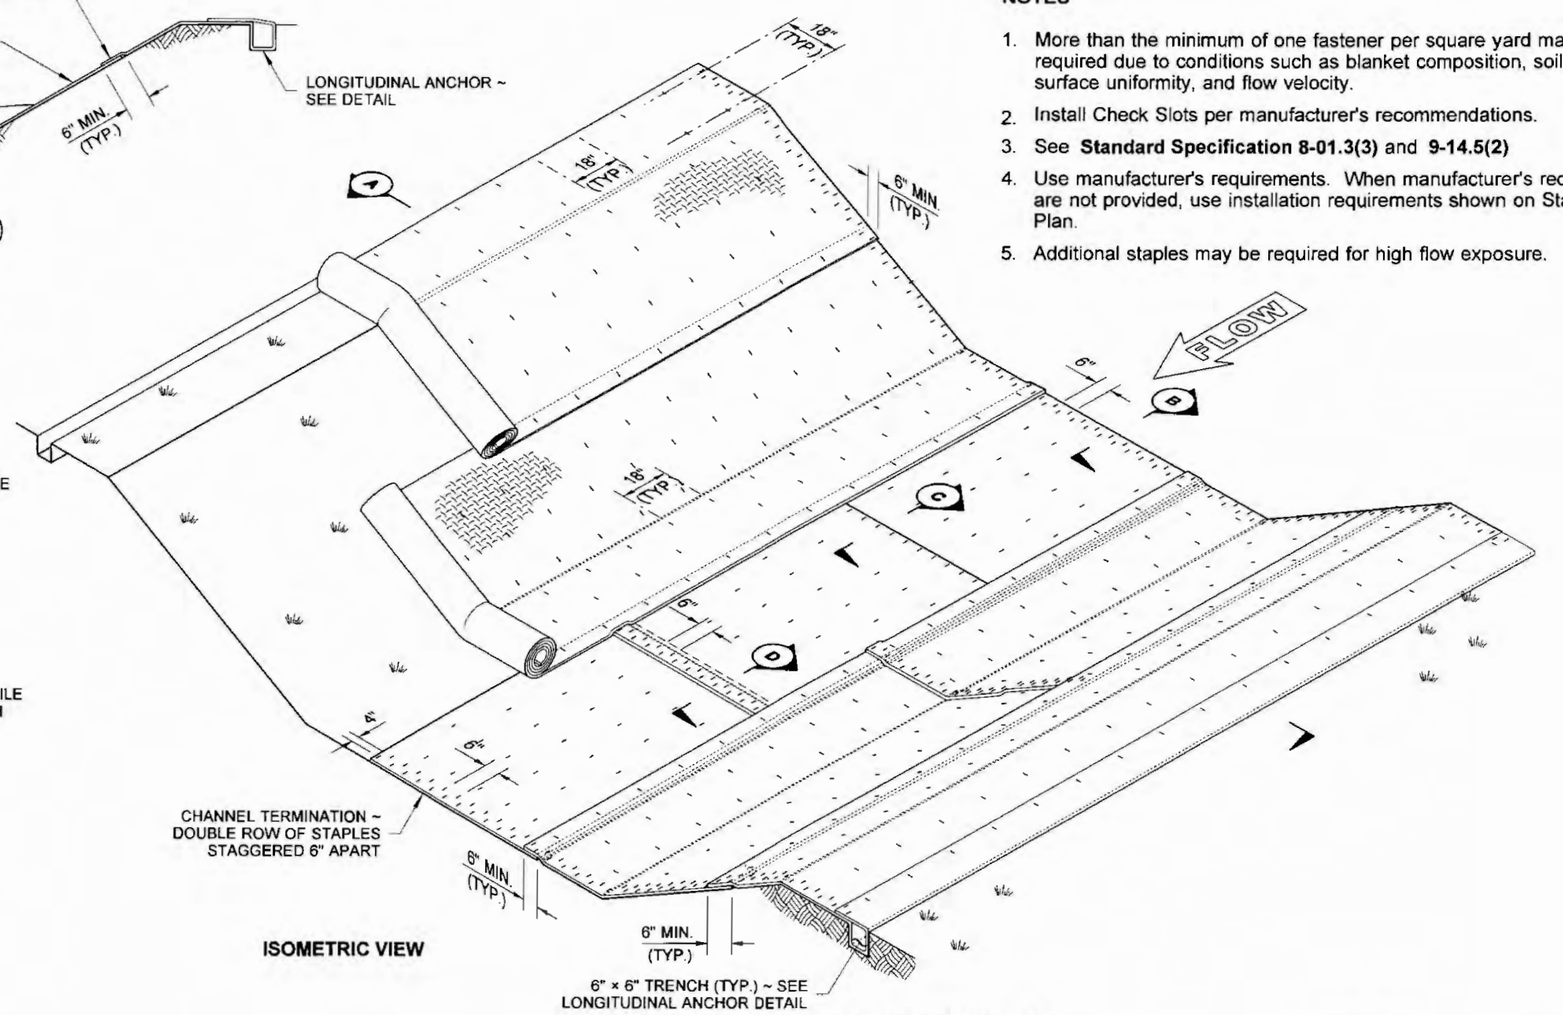

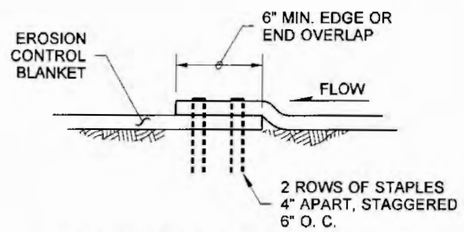

INITIAL ANCHOR ~ SECTION (B)

CHECK SLOT ~ SECTION (C)

ISOMETRIC VIEW

SHINGLE SPLICE AT END OF ROLL

SECTION (D)

NOTES

1. More than the minimum of one fastener per square yard may be required due to conditions such as blanket composition, soil type, surface uniformity, and flow velocity.
2. Install Check Slots per manufacturer's recommendations.
3. See **Standard Specification 8-01.3(3)** and **9-14.5(2)**
4. Use manufacturer's requirements. When manufacturer's requirements are not provided, use installation requirements shown on Standard Plan.
5. Additional staples may be required for high flow exposure.

INSTALLATION STEPS:

1. Prepare smooth slope.
2. Amend soil and seed, as specified.
3. Dig anchor trench. Set aside native soil removed from trench.
4. Secure blanket in anchor trench, staking or stapling blanket as shown.
5. Replace native soil previously removed from trench.
6. Roll blanket parallel to the slope in a controlled manner, taking care to remove excess slack, and taking care not to stretch blanket.
7. Stake or staple blanket as shown so there are no gaps between the blanket and the soil. Staple while unrolling blanket to minimize walking on blanket.

TYPE 334

* TO BE INSTALLED BY REGION MAINTAINANCE PERSONNEL ~ PROVIDE A 15' (FT) PIGTAIL (SEE NOTE 12)

CONSTRUCTION NOTES

1. Drive ground rods before placing concrete. Move rod(s) and drain tiles with cover(s) as required to achieve full ground penetration. Maintain a 6' (ft) minimum clearance between ground rods and 6" (in) from foundation edge as detailed on **Standard Plan J-60.05**.
2. GRS conduits penetrating all cabinets shall be terminated with grounding end bushing and bonded to the cabinet grounding bus. All PVC conduits penetrating cabinet shall be terminated with end bell bushings.
3. Install conduit couplings on all conduits. Place coupling tops flush with top of concrete. If PVC conduits are specified, the conduit stub and end bell bushing shall not be glued to the coupling.
4. 4" (in) diam. × 1/2" (in) deep sump. Slope foundation within cabinet footprint toward sump. Drainpipe shall be 3/8" (in) diam. polyethylene or copper tubing.
5. The Type D Service shall not be installed on a raised section. All other cabinets shall be installed on 3 1/2" (in) or 9" (in) cabinet footing.
6. Cabinet power supply conduit.
7. Conduits for service grounding electrodes.
8. When distance detailed in Typical Foundation Plan is greater than 8' (ft), this conduit and conductor shall be deleted.

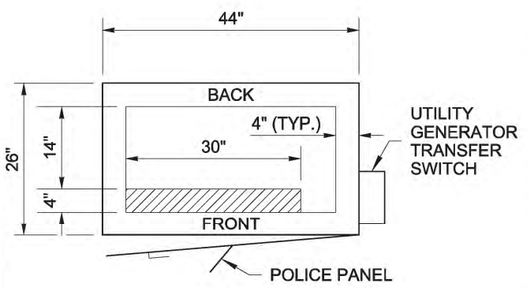

CONDUIT PLACEMENT LOCATION AREA (OR TRANSFORMER HIGH-VOLTAGE CONDUIT AREA)

PLAN VIEWS

CABINET FOOTPRINT AND CONDUIT PLACEMENT LOCATIONS

NOTES

1. The cabinets shown in these details are shown for illustrative purposes only. The Contractor shall verify the plans and substitute those cabinets in place of the cabinets shown in these details. The Contractor shall install each cabinet type in the locations and orientations shown in these details.
2. The Contractor shall install the conduits in the locations shown. Conduits shall extend 2" (in) min. above the coupling. The grounded end bushing on GRS conduit and the end bell bushing on PVC conduit shall extend 3" (in) max. above the coupling. The conduit containing unfused utility conductors shall extend into the utility chase.
3. The ground rods, drain tiles, associated conduits, and #4 rebar (90° with 30" (in) legs), may be omitted if no transformer or service cabinet is to be installed.
4. The cabinets shall be attached to the foundation with 4 each: 1/2" (in) × 10" (in) × 2" (in) × 4" (in) anchor bolts (see Detail on Sheet 4 of 6), washers, and nuts conforming to **Standard Specification 9-06.5(1)** and hot-dip galvanized after fabrication in accordance with AASHTO M 232. Locate anchor bolts per cabinet manufacturer. Stainless steel epoxy anchors may be used as an alternative, and shall be 1/2" (in) diameter x 9" (in), or 5/8" (in) diameter x 8" (in). All threaded rod (conforming to ASTM F593), washers (conforming to ASTM A240), and nuts (conforming to ASTM F594), shall be Type 304 stainless steel. Bolts shall extend 1 1/2" (in) min. to 2" (in) max. above the concrete pad.
5. All reinforcing steel shall be embedded 2" (in) below surface of concrete.
6. Place a 1/2" (in) bead of silicone between cabinets and foundation.
7. Two ground rods are required for foundations with a service cabinet or transformer cabinet. See **Standard Plan J-60.05** for details.
8. Concrete shall be class 3000. See **Standard Specification 8-20.3(4)**.
9. Verify dead front locations from manufacturer prior to placing conduit in foundation.
10. Foundations installed in, or adjacent to, sidewalks shall be constructed with the top flush with the sidewalk surface and grade, not including concrete risers for cabinets. Omit chamfers where foundation abuts sidewalk.
11. If the slope is 3H : 1V or steeper, special considerations may be necessary for safety reasons. Coordinate with Maintenance and Project Engineer.
12. For Type 333SD Controller Cabinet, the cabinet vendor shall allow the Utility Transfer Switch to be installed on either side of the cabinet. The Utility Transfer Switch unit shall be shipped inside the cabinet for field installation by Region maintenance personnel.
13. Height of cabinet riser shall be adjusted to serve environmental needs. Type D Service cabinet shall have no riser. NEMA P44, Type 333SD, and Type B Modified shall have a 9' (in) riser. All other cabinets shall have a 3 1/2" (in) riser. See Contract for alternative height. Adjust length of conduit and rebar accordingly.
14. Use (1) #4 hoop for a 3 1/2" (in) cabinet footing and (2) #4 hoops for a 9" (in) cabinet footing.
15. The Police Panel location is set by industry standards on all Controller Cabinets.
16. See **Standard Plan J-10.20** for additional Foundation Construction and Conduit Routing for Type B Modified Service Cabinet with Controller Cabinet.
17. Verify pad size and location with Project Engineer prior to placing.
18. Field bend #4 rebar around the Generator Anti-Theft Tie-Down Unit when required.
19. See **Standard Plans J-10.21** and **J-10.22** for additional details for Type D and Type E Service Cabinets.
20. As an alternate, #3 rebar spaced at 1' - 0" O.C. longitudinally and transversely may be used.

SECTION (A)

SECTION (B)

9" (IN) RAISED CABINET PAD SHOWN ~ 3 1/2" (IN) RAISED CABINET PAD IS SIMILAR, WITH ONE #4 TOP HOOP

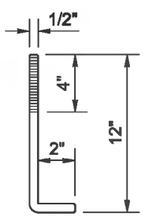

NOTES

1. Contractor shall orient the maintenance pad to align with the direction of natural grade as shown. Obtain Engineer's approval of maintenance pad orientation prior to proceeding with construction.
2. The maintenance pad and retaining walls have been designed to meet the requirements of the AASHTO LRFD Bridge Design Specifications, 6th Edition, 2012.
3. Concrete for walls and bases shall be class 4000.
4. Height of wall varies to match slope of existing grade. Contractor shall field-determine wall height and each maintenance pad location and obtain approval from the Engineer prior to proceeding with construction.
5. 3/4" (in) chamfer for all exposed corners.
6. For grounding details not shown, see **Standard Plan J-60.05.**
7. For cabinet and conduit details not shown, see **Standard Plan J-10.10.**
8. The cabinets shall be attached to the foundation with 4 each: 1/2" (in) × 12" (in) × 2" (in) × 4" (in) anchor bolts (see Detail on this Sheet), washers, and nuts conforming to **Standard Specification 9-06.5(1)** and galvanized after fabrication in accordance with AASHTO M 232. Locate anchor bolts per cabinet manufacturer. Stainless steel epoxy anchors may be used as an alternative, and shall be 1/2" (in) diameter x 9" (in), or 5/8" (in) diameter x 8" (in). All threaded rod (conforming to ASTM F593), washers (conforming to ASTM A240), and nuts (conforming to ASTM F594), shall be Type 304 stainless steel. Bolts shall extend 1 1/2" (in) min to 2" (in) max above the concrete pad.

DETAIL (A)

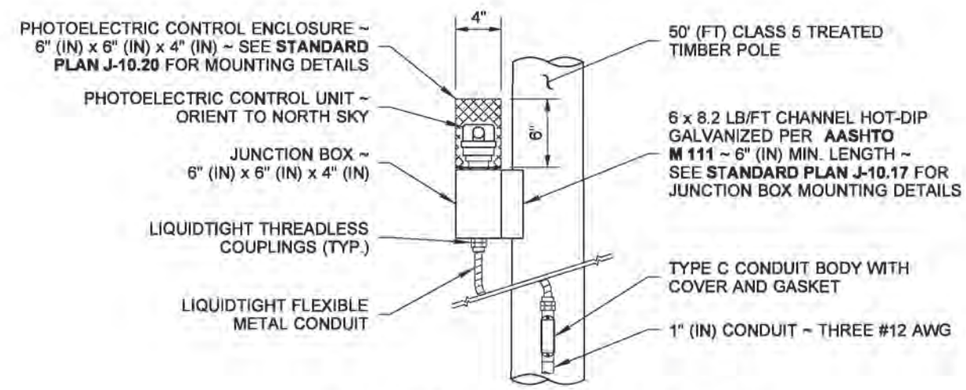

SERVICE CABINET MOUNTING DETAILS

NOTES

1. Metering arrangements may vary with different serving utilities. The Contractor shall verify the requirements of the utility prior to installing the service equipment.
2. All service pole conduits shall be secured to the pole with two-hole conduit straps spaced at 5' (ft) maximum centers. See **Standard Plans J-60.13 and J-60.14** for steel channel support and wood pole mounting details. Where required by the Utility, an alternative-use hot-dip galvanized standoff bracket may be used. For details, see ALTERNATE STANDOFF BRACKET DETAIL on Sheet 2.
3. All risers and service equipment shall be installed on side of pole that is away from traffic.
4. Where required by the serving utility, service breakers shall be installed above meter socket in a separate rain-tight enclosure.
5. See **Standard Plan J-60.05** for grounding details.
6. See Breaker Schedule in Contract for breaker and contactor sizes.
7. See **Standard Plan J-60.13** for mounting details.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES (CONTINUED)

8. See **Standard Specification 9-29.24** (Service Cabinets).
9. Hinges shall have stainless steel or brass pins.
10. Cabinet shall be rated NEMA 3R.
11. The metering equipment door shall be pad-lockable. Each door shall be gasketed. See **Standard Plan J-10.20** for door hinge details.
12. The following equipment within the service enclosure shall have an appropriately engraved phenolic name plate attached with screws or rivets:
    Key Numbers 2, 3, 4, 6, 7, and 8.
    Key Number 4 name plate shall read as follows:
    "PHOTOCELL BYPASS TEST ON" AND "PHOTOCELL TEST OFF - AUTOMATIC."
    See service cabinet detail.
13. Dimensions shown are minimum and shall be adjusted to accommodate the various sizes of equipment installed.
14. All busswork shall be high grade copper and shall equal or exceed the main breaker rating. All breakers shall bolt on to the busswork. Jumpering of breakers shall not be allowed. Busswork shall accommodate all future equipment as shown in the Breaker Schedule.
15. The photoelectric control unit shall be centered in the photoelectric control enclosure to permit 360 degree rotation of the photoelectric control unit without removal of the photoelectric control unit or the photoelectric control enclosure.
16. All internal wire runs shall be identified with "TO - FROM" coded tags labeled with the code letters and/or numbers shown on the Schedules. Approved PVC or polyolefin wire marking sleeves shall be used.
17. All nuts, bolts, screws, and washers used for mounting the photoelectric control enclosure, conduit body covers, and junction box cover shall be **ASTM F593** or **A193 Type 304** or **Type 316** stainless steel.
18. A 1% tolerance is allowed for all dimensions.
19. Slotted steel channel and mounting hardware components shall be stainless steel. Conduit clamps shall be hot-dip galvanized steel or stainless steel.
20. Install conduit couplings on all conduits.
21. When using alternate door hinge, remove hinge pin prior to welding the hinge to the cabinet and prior to hot-dip galvanizing. After galvanizing, replace pin with a brass pin or solder in place. See **Standard Plan J-10.20** for alternate door hinge details.
22. The photoelectric control enclosure shall be fabricated from 5/8" (in) expanded steel mesh with welded seams and mounting flanges and shall be hot-dip galvanized after fabrication. Type 5052 - H32 aluminum with 5/8" (in) x 5/8" (in) expanded steel mesh may be used as an alternative material. See **Standard Plan J-10.20** for enclosure mounting details.
23. See Contract for Breaker Schedule.

3. All risers and service equipment shall be installed on side of pole that is away from traffic.
4. Where required by the serving utility, service breakers shall be installed above meter socket in a separate rain-tight enclosure.
5. See **Standard Plan J-60.05** for grounding details.
6. See Breaker Schedule in Contract for breaker and contactor sizes.
7. See **Standard Plan J-10.16** for photoelectric control details.
8. See **Standard Plan J-10.16** for service cabinet mounting details.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES (CONTINUED)

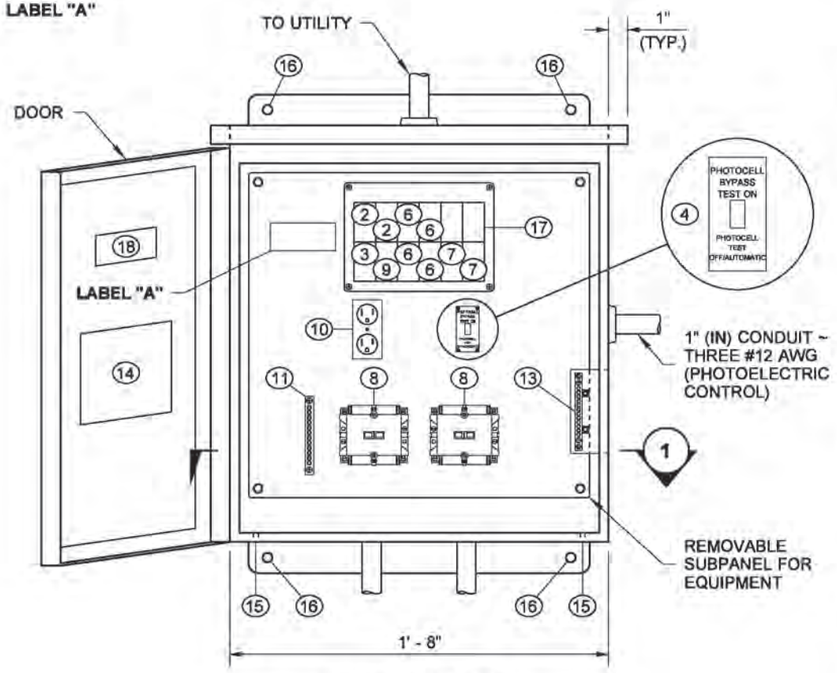

9. See **Standard Specification 9-29.24** (Service Cabinets).
10. Hinges shall have stainless steel or brass pins.
11. Cabinet shall be rated NEMA 3R and shall include two rain-tight vents.
12. The metering equipment door shall be pad-lockable. Each door shall be gasketed. See **Standard Plan J-10.20** for door hinge details.
13. The following equipment within the service enclosure shall have an appropriately engraved phenolic name plate attached with screws or rivets:
    Key Numbers 2, 3, 4, 6, 7, 8, and 9.
    Key Number 4 name plate shall read as follows:
    "PHOTOCELL BYPASS TEST ON" AND "PHOTOCELL TEST OFF - AUTOMATIC."
    See service cabinet detail.
14. Metering arrangements vary with serving utilities. The Contractor shall verify the serving utility's requirements prior to fabrication and installation of the service equipment.
15. Dimensions shown are minimum and shall be adjusted to accommodate the various sizes of equipment installed.
16. All busswork shall be high-grade copper and shall equal or exceed the main breaker rating. All breakers shall bolt on to the busswork. Jumpering of breakers shall not be allowed. Busswork shall accommodate all future equipment as shown in the Breaker Schedule.
17. The photoelectric control unit shall be centered in the photoelectric control enclosure to permit 360 degree rotation of the photoelectric control unit without removal of the photoelectric control unit or the photoelectric control enclosure.
18. All internal wire runs shall be identified with "TO - FROM" coded tags labeled with the code letters and/or numbers shown on the Schedules. Approved PVC or polyolefin wire marking sleeves shall be used.
19. All nuts, bolts, screws, and washers used for mounting the photoelectric control enclosure, conduit body covers, and junction box cover shall be **ASTM F593** or **A193 Type 304** or **Type 316** stainless steel.
20. A 1% tolerance is allowed for all dimensions.
21. Slotted steel channel and mounting hardware components shall be stainless steel. Conduit clamps shall be hot-dip galvanized steel or stainless steel.
22. Install conduit couplings on all conduits.
23. When using alternate door hinge, remove hinge pin prior to welding the hinge to the cabinet and prior to hot-dip galvanizing. After galvanizing, replace pin with a brass pin or solder in place. See **Standard Plan J-10.20** for alternate door hinge details.
24. The photoelectric control enclosure shall be fabricated from 5/8" (in) expanded steel mesh with welded seams and mounting flanges and shall be hot-dip galvanized after fabrication. Type 5052 - H32 aluminum with 5/8" (in) x 5/8" (in) expanded steel mesh may be used as an alternative material. See **Standard Plan J-10.20** for enclosure mounting details.
25. See Contract for Breaker Schedule.

NOTES

1. Metering arrangements may vary with different serving utilities. The Contractor shall verify the requirements of the utility prior to installing the service equipment.
2. All service pole conduits shall be secured to the pole with two-hole conduit straps spaced at 5' (ft) maximum centers. See **Standard Plans J-60.13 and J-60.14** for steel channel support and mounting details. Where required by the Utility, an alternative-use hot-dip galvanized standoff bracket may be used. See **Standard Plan J-10.16** for ALTERNATE STANDOFF BRACKET DETAIL.
3. All risers and service equipment shall be installed on side of pole that is away from traffic.
4. Where required by the serving utility, service breakers shall be installed above meter socket in a separate rain-tight enclosure.
5. See **Standard Plan J-60.05** for grounding details.
6. See Breaker Schedule in Contract for breaker and contactor sizes.
7. See **Standard Plan J-10.16** for photolectric control details.
8. See **Standard Plan J-10.16** for service cabinet mounting details.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

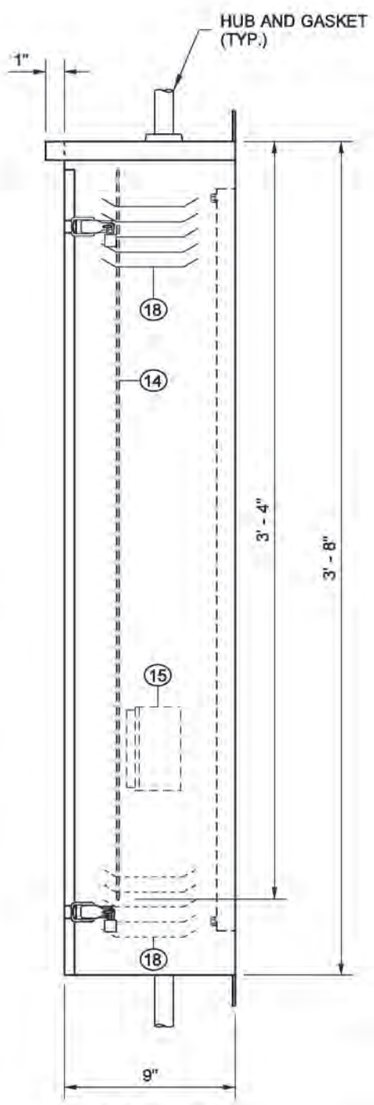

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES (200 AMP TYPE 120/240 1ø SERVICE CABINET)

1. See **Standard Specification 9-29.24** (Service Cabinets).
2. Hinges shall have stainless steel or brass pins.
3. Cabinets shall be rated NEMA 3R and shall include two rain-tight vents.
4. Metering equipment door shall be pad-lockable. Each door shall be gasketed. Install Best CX Construction Core on right side door. See Door Hinge Detail.
5. The following equipment within the service enclosure shall have an appropriately engraved phenolic name plate attached with screws or rivets:
   Key Numbers 2, 3, 4, 6, 7, 8, 9, & 16
   Key Number 4 name plate shall read:
   "PHOTOCELL BYPASS TEST ON" and "PHOTOCELL TEST OFF-AUTOMATIC". See Service Cabinet Detail.
6. Metering arrangements vary with different serving Utilities. The Utility may require meter base mounting in the enclosure, on the side, or on the back of the enclosure. The Utility may require the dimension between the door and the front of the safety socket box to be less than the 11" (in) shown in the Left Side - Safety Socket Box Mounting Detail. The Contractor shall verify the serving Utility's requirements prior to fabrication and installation of the service equipment.
7. Dimensions shown are minimum and shall be adjusted to accommodate the various sizes of equipment installed.
8. All busswork shall be high-grade copper and shall equal or exceed the main breaker rating. All breakers shall bolt onto the busswork. Jumpering of breakers shall not be allowed. Busswork shall accommodate all future equipment as shown in the breaker schedule.
9. The photocell unit shall be centered in the photocell enclosure to permit 360 degree rotation of the photocell without removal of the photocell unit or the photocell enclosure.
10. All internal wire runs shall be identified with "TO - FROM" coded tags labeled with the code letters and/or numbers shown on the schedules. Approved PVC or polyolefin wire marking sleeves shall be used.
11. All nuts, bolts, and washers used for mounting the photocell enclosure shall be stainless steel.
12. A 1% tolerance is allowed for all dimensions.
13. Slotted steel channel and mounting hardware components shall be stainless steel. Conduit clamps shall be hot-dipped galvanized steel or stainless steel.
14. The meter base portion of this service was designed to meet metering portion of **EUSERC Drawing 309** requirements.
15. When using alternate door hinge:
    Remove hinge pin prior to welding hinge to cabinet and prior to hot-dip galvanizing. After galvanizing, replace pin with brass pin and solder in place.
16. Verify the service utility stand-off dimension. Adjust the removable panel to the measurement provided by the Utility Company. After adjustment, cut off all-thread bolts so that no less than two and no more than three full threads extend past the face of the nuts.

SERVICE CABINET ~ SLAB SECTION

NOTES (200 AMP TYPE 120/240 1ø SERVICE CABINET)

1. See **Standard Specification 9-29.24** (Service Cabinets).
2. Hinges shall have stainless steel or brass pins.
3. Cabinets shall be rated NEMA 3R and shall include two rain-tight vents.
4. Metering equipment door shall be pad-lockable. Each door shall be gasketed. Install Best CX Construction Core on bottom door. See Door Hinge Detail, **Standard Plan J-10.20**. Concealed heavy-duty stainless steel lift-off hinges are allowed as an alternative to Door Hinge Detail on **Standard Plan J-10.20**. Upper door shall have two hinges and lower door shall have three hinges. The lower door shall have a two-position door stop assembly.
5. The following equipment within the service enclosure shall have an appropriately engraved phenolic name plate attached with screws or rivets:
   Key Numbers 2, 3, 4, 6, 7, 8, 9, 16, & 21
   Key Number 4 name plate shall read:
   "PHOTOCELL BYPASS TEST ON" and
   "PHOTOCELL TEST OFF-AUTOMATIC."
   See Service Cabinet Detail.
6. Metering arrangements vary with different serving Utilities. The Utility may require meter base mounting in the enclosure, on the side, or on the back of the enclosure. The Utility may require the dimension between the door and the front of the safety socket box to be less than the 11" (in) shown in the Left Side - Safety Socket Box Mounting Detail. See **Standard Plan J-10.20** for Safety Socket Box Detail. The Contractor shall verify the serving Utility's requirements prior to fabrication and installation of the service equipment.
7. Dimensions shown are minimum and shall be adjusted to accommodate the various sizes of equipment installed.
8. All busswork shall be high-grade copper and shall equal or exceed the main breaker rating. All breakers shall bolt onto the busswork. Jumpering of breakers shall not be allowed. Busswork shall accommodate all future equipment as shown in the breaker schedule.
9. The photocell unit shall be centered in the photocell enclosure to permit 360 degree rotation of the photocell without removal of the photocell unit or the photocell enclosure.
10. All internal wire runs shall be identified with "TO - FROM" coded tags labeled with the code letters and/or numbers shown on the schedules. Approved PVC or polyolefin wire marking sleeves shall be used.
11. All nuts, bolts, and washers used for mounting the photocell enclosure shall be stainless steel.
12. A 1% tolerance is allowed for all dimensions.
13. The photocell circuit shall be installed in flex conduit within the meter compartment.
14. Install conduit couplings on all conduits. Top of conduit couplings shall be flush with the top of concrete foundation.
15. See Plans for Breaker Schedule.
16. Seal cabinet to foundation with a 1/2" (in) bead of silicone. Apply silicone to dry surface only.
17. The meter base portion of this service was designed to meet metering portion of **EUSERC Drawing 309** requirements.
18. When Service Cabinet is installed within right of way fence, see **Standard Plan J-10.22** for details.

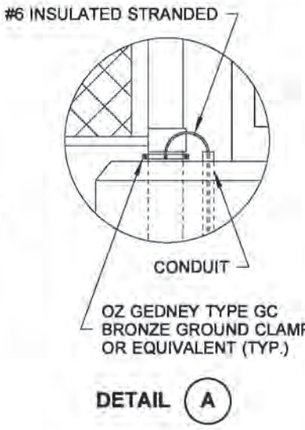

PLAN VIEW ~ IN FENCE LINE

WIRING SCHEMATIC

KEY

1. METER BASE PER SERVING UTILITY REQUIREMENTS ~ AS A MINIMUM, THE METER BASE SHALL BE SAFETY SOCKET BOX WITH FACTORY-INSTALLED TEST BYPASS FACILITY THAT MEETS THE REQUIREMENTS OF **EUSERC DRAWING 305** ~ WHEN THE UTILITY REQUIRES METER BASE TO BE MOUNTED ON THE SIDE OR BACK OF THE SERVICE CABINET, THE METER BASE ENCLOSURE SHALL BE FABRICATED FROM TYPE 304 STAINLESS STEEL.
2. MAIN BREAKER ~ SEE BREAKER SCHEDULE
3. PHOTOCELL BREAKER ~ SPST 15 AMP - 120/240 VOLT
4. TEST SWITCH ~ SPDT SNAP ACTION - POSITIVE CLOSE 15 AMP - 120/277 VOLT - "T" RATED
5. PHOTOELECTRIC CONTROL ~ SEE **STANDARD SPECIFICATION 9-29.11(2)**
6. BRANCH BREAKER ~ SEE BREAKER SCHEDULE
7. SIGNAL BREAKER ~ SEE BREAKER SCHEDULE
8. CONTACTOR ~ SEE BREAKER SCHEDULE
9. RECEPTACLE BREAKER ~ SPST 20 AMP - 120/240 VOLT
10. RECEPTACLE (GROUNDED) ~ GFCI 20 AMP - 125 VOLT
11. ISOLATED NEUTRAL BUSS ~ 14 LUG COPPER
12. PHOTOCELL ENCLOSURE ~ ENCLOSURE TO BE FABRICATED FROM 5/8" (IN) EXPANDED STEEL MESH WITH WELDED SEAMS AND MOUNTING FLANGES ~ HOT-DIP GALVANIZED AFTER FABRICATION ~ TYPE 5052 - H32 ALUMINUM WITH 5/8" (IN) x 5/8" (IN) OPENINGS EQUIVALENT TO 5/8" (IN) EXPANDED STEEL MESH MAY BE USED AS ALTERNATIVE MATERIAL ~ SEE PHOTOCELL MOUNTING DETAIL ON **STANDARD PLAN J-10.20**
13. HINGED FRONT FACING DOOR WITH 4" (IN) x 4" (IN) MINIMUM POLISHED WIRE GLASS WINDOW
14. HINGED DEAD FRONT WITH 1/4 TURN FASTENERS OR SLIDE LATCH ~ DEAD FRONT PANEL BOLTS SHALL NOT EXTEND INTO VERTICAL LIMITS OF THE BREAKER ARRAY(S)
15. CABINET MAIN BONDING JUMPER ASSEMBLY ~ BUSS SHALL BE 14 LUG TINNED COPPER ~ SEE CABINET MAIN BONDING JUMPER ASSEMBLY DETAIL ON **STANDARD PLAN J-10.20**
16. SPARE BRANCH BREAKER ~ DPST 20 AMP - 120/240 VOLT
17. METAL WIRING DIAGRAM HOLDER
18. REMOVABLE EQUIPMENT MOUNTING PAN
19. 6" (IN) x 6" (IN) MIN. UNDERGROUND FEED ~ SERVICE WIREWAY (LEFT REAR CORNER)
20. SCREENED VENTS ~ TWO REQUIRED, 1 EACH SIDE ~ LOUVERED PLATES
21. HEATER BREAKER ~ SPST 15 AMP - 120/ 240VOLT
22. THERMOSTAT ~ 40° F CLOSURE - 3 DIFFERENTIAL
23. STRIP HEATER (100 WATT NOMINAL) WITH TERMINAL STRIP COVER

INSTALL FOUNDATION AS SLAB SECTION UNLESS IDENTIFIED FOR CONSTRUCTION IN FENCE LINE IN CONTRACT PLANS

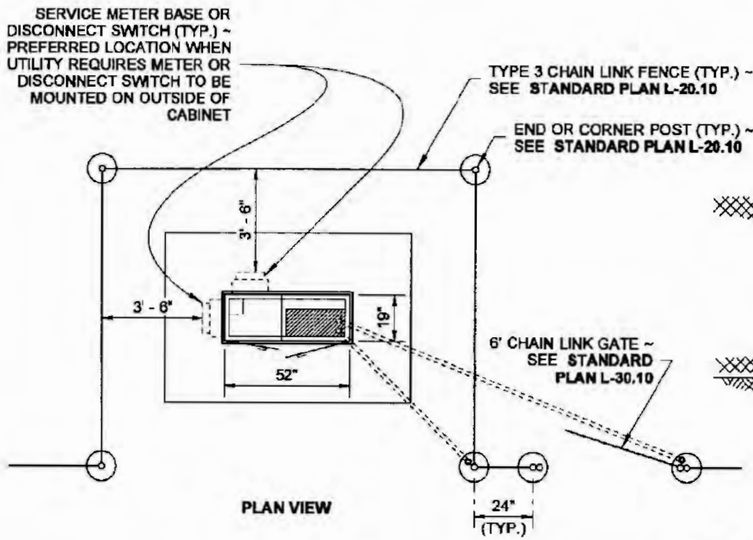

DETAIL (A)

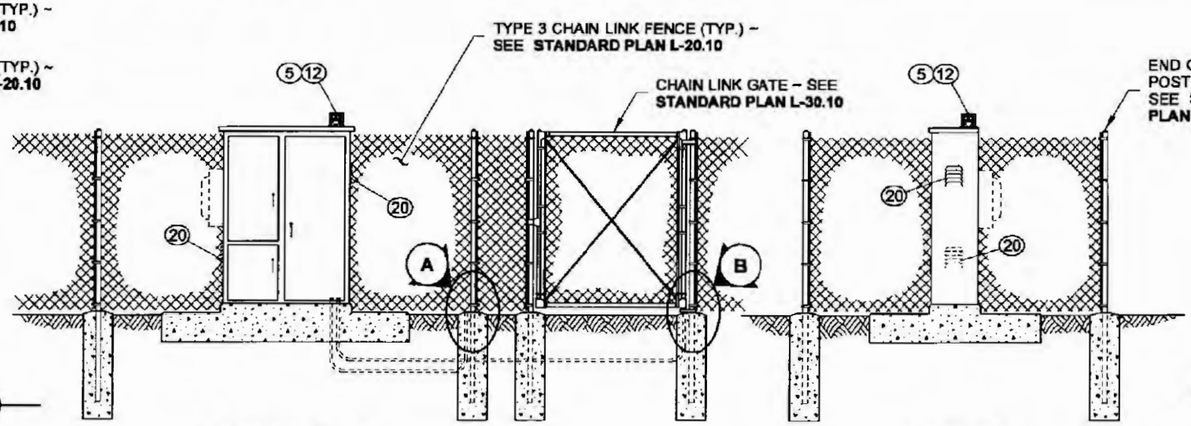

DETAIL (B)

NOTES

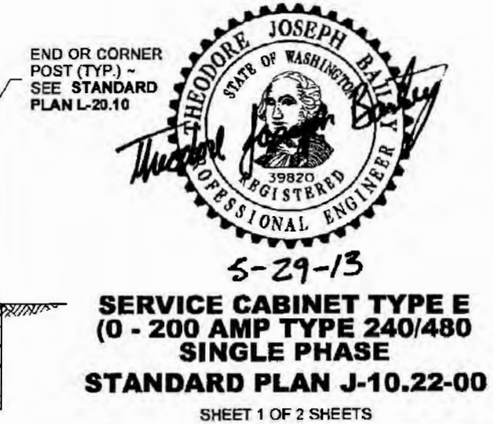

1. Metering Arrangements vary with different servicing utilities. The utility may require meter base mounting in the enclosure, on the side, or on the back of the enclosure. The utility may require the dimension between the door and the front of the safety socket box to be less than the 11" shown in the left side safety socket box mounting detail, see **Standard Plan J-3b**. The Contractor shall verify the serving utility's requirements prior to fabrication of and installing the service equipment.
2. The requirement for a disconnect switch ahead of the Meter varies with different serving utilities. The Contractor shall verify the serving utilities requirements prior to fabrication and installing the service equipment.
3. See **Standard Specification 9-29.24,** Service Cabinets.
4. Hinges shall have stainless steel or brass pins.
5. Cabinets shall be rated NEMA 3R and shall include two rain tight vents.
6. Metering equipment doors shall be pad lockable. Each door shall be gasketed. Install best construction core on bottom left and right doors. See door hinge detail, **Standard Plan J-3b**. Concealed heavy duty stainless steel lift off hinges are allowed as an alternative. Upper left door shall have 3 hinges, lower left door shall have 2 hinges, and right door shall have 3 hinges. All doors shall have a two position door stop assembly.
7. The following equipment within the service enclosure shall have an appropriately engraved phenolic name plate attached with screws or rivets: Key number 2, 3, 4, 6, 7, 8, 9, 16, 21 and 24. Key number 4 name plate shall read: "Photocell Bypass Test On" and "Photocell Test Off-Automatic". See Service Cabinet detail.
8. The dimensions shown are minimum and shall be adjusted to accommodate the various sizes of equipment installed.
9. All busswork shall be high grade copper and shall equal or exceed the main breaker rating. All breakers shall bolt onto the busswork. Jumpering of breakers shall not be allowed. Busswork shall accommodate all future equipment as shown in the breaker schedule.
10. The photocell unit shall be centered in the photocell enclosure to permit 360 degree rotation of the photocell without removal of the photocell unit or the photocell enclosure.
11. All internal wire runs shall be identified with "To-From" coded tags labeled with the code letters and/or numbers shown on the schedules. Approved PVC or Polyolefin wire marking sleeves shall be used.
12. All nuts, bolts, and washers used for mounting photocell enclosure shall be stainless steel.
13. A 1% tolerance is allowed for all dimensions.
14. See plans for breaker schedule.
15. Install conduit couplings on all conduits. Place couplings flush with top of concrete foundation.
16. Seal cabinet to foundation with a 1/2" bead of silicone. Apply silicone to dry surface only.
17. The meter base portion of this service was designed to meet metering portion of Euserc Drawing 309 requirements.

KEY

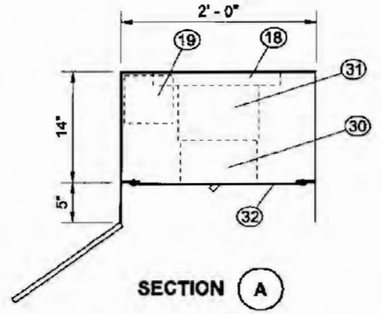

1. Meter base per serving utility requirements. As a minimum, the meter base shall be safety socket box with factory installed test bypass facility that meets the requirements of Euserc Drawing 305.
2. Main Breaker (See Breaker Schedule).
3. Photocell Breaker (SPST 15 AMP - 120/240 volt).
4. Test With (SPDT snap action, positive close 15 AMP - 120/277 volt "T" rated).
5. Photoelectric Control, **Standard Specification 9-29.11(2).**
6. Branch Breaker (see Breaker Schedule).
7. Signal Transformer Breaker (see Breaker Schedule).
8. Contactor (see Breaker Schedule).
9. Receptacle Breaker (SPST 20 AMP - 120/240 volt).
10. Receptacle, Grounded (GFCI 20 AMP - 125 volt).
11. Neutral Buss, 14 lug copper with stainless steel Allen head screws.
12. Photocell Enclosure - enclosure to be fabricated from 5/8" expanded steel mesh with welded seams and mounting flanges. Hot dip galvanized after fabrication. Type 5052 - H32 aluminum with 5/8" × 5/8" openings equivalent to 5/8" expanded steel mesh may be used was alternative material. See Photocell Enclosure Mounting details, **Standard Plan J-3b.**
13. Hinged front facing door with 4" × 4" min. polished wire glass window.
14. Hinged dead front with 1/4 turn fasteners or slide latch.
15. Cabinet Main Bonding Jumper. Buss shall be 4 lug tinned copper. See Cabinet Main bonding Jumper detail, **Standard Plan J-3b.**
16. Spare Branch Breaker (DPST 20 AMP - 240/480 volt).
17. Metal Wiring Diagram Holder.
18. Removable Equipment Mounting Pan.
19. 6" × 6" min, underground feed - service wire-way (left rear corner).
20. Screened Vents, 2 required, 1 each side, louvered plates.
21. Heater Breaker (SPST 15 AMP - 120/240 volt).
22. Thermostat, 40°F closure 3 differential.
23. Strip Heater (100 watt nominal), with terminal strip cover.
24. Transformer Breaker (DPST 15 AMP - 480 volt).
25. Dry Transformer (480/120 volt) 3 KVA copper bussed and copper wound.
26. Reserved for meter, current transformer and/or disconnect switch as required by the utility.
27. 24 circuit panel board - minimum size with separate main breaker.
28. Label Cabinet with Buss work rating.
29. 6 Circuit Panel Board - minimum size.
30. Molded Case Switch, Rating of switch shall equal or exceed main breaker rating. Provide landing lugs rated to accept 350 Kcmil conductors. (Omit if utility requires the disconnect switch to be mounted externally, or if the utility does not require the disconnect switch).
31. Molded case switch standoff bracket. (Omit if utility requires the disconnect switch to be mounted externally, or if the utility does not require the disconnect switch).
32. Molded case switch enclosure with cover. (Omit if utility requires the disconnect switch to be mounted externally, or if the utility does not require the disconnect switch).

DOWN GUY DETAIL

STRAIN INSULATOR DETAIL

TIMBER STRAIN POLE
(WITH SELF-LOCKING CABLE CLAMP TYPE DEAD-ENDING DEVICE SHOWN)

TYPE IV OR TYPE V STRAIN POLE STANDARD
(SEE NOTE 3)

NOTES

1. An eight-way expanding anchor may be used as an acceptable alternate to power-installed helical screw anchor.
2. If anchor hole diameter is greater than nominal diameter of folded anchors, a 5' (ft) cover of 6" (in) to 12" (in) size rock shall be tamped in to replace the disturbed soil immediately above the anchor.
3. See **Standard Plans J-27.10** and **J-27.15** for Type IV or Type V Strain Pole details not shown.
4. Self-Locking Cable Clamp Type Dead-Ending Device or Guy Wrap may be used. See **Standard Spec. Sect. 8-20.3(7)** for additional requirements.
5. See Contract for Emergency Preempt Detector locations.
6. Timber strain pole burial depth is 10 percent (%) of the total pole length plus two (2) feet (**Standard Spec. Sect. 8-20.3(14)E**) when foundation soil lateral bearing pressure is 2000 PSF and a friction angle 32 degree (°) or greater soil lateral pressure. Helical anchor soil lateral bearing pressure is 1000 PSF and a friction angle 26 degree (°) or greater. Soil lateral bearing pressure below 2000 PSF for timber strain pole or soil lateral bearing pressure below 1000 PSF for helical anchor requires Special Design. Contact the WSDOT Bridge and Structures office through the Engineer for Special Design timber strain pole burial depth.

DIMENSIONS ARE OUT TO OUT

BASE PLATE DETAIL

SECTION (B)

SECTION (A)

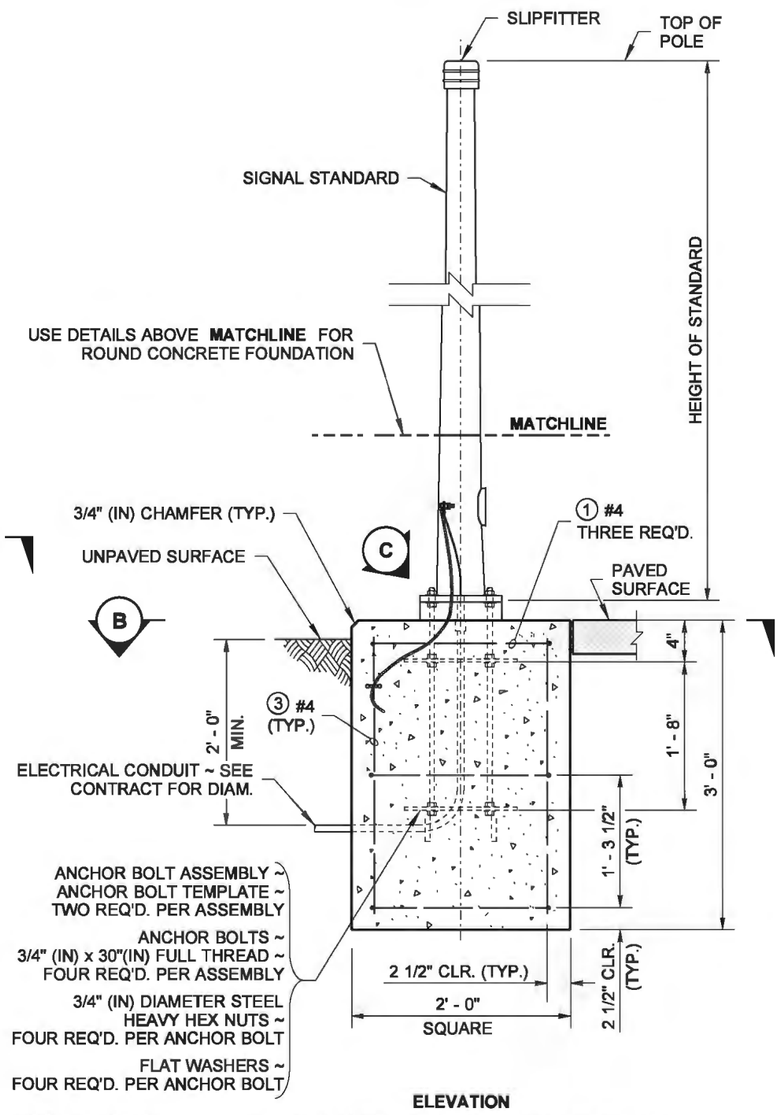

NOTES

1. Clamping bolts shall be tightened to 50 ft-lbs max. torque. After state inspection, burr threads to prevent nut rotation. DO NOT OVERTIGHTEN.
2. The final height of the Anchor Bolts shall be below the top of the slip plate assembly to ensure proper function of the slip base.
3. Supplemental grounding conductor shall be non-insulated #4 AWG stranded copper and shall be clamped to vertical rebar with a connector suitable for use embedded in concrete; Provide 3' - 0" min. slack. Attach to pole grounding stud with a full circle crimp-on connector (crimped with a manufacturer recommended crimper)
4. Junction box serving the Standard shall preferably be located 5' - 0" (10' - 0" Max.) from the Standard.
5. Provide cable tie at wiring entering the junction box (for slip base installations only) ~ See **Detail A, Standard Plan J-28.70**.
6. Keeper Plate shall not extend beyond the edges of the pole base plate.

NOTES

1. See **Standard Plan J-21.10** for Signal Standard Foundation with Fixed Base and Slip Base details.
2. Steel shaft shall be tapered either round or dodecagon (12 sided), 11 gage, 4 1/2" O.D. at slipfitter. Taper shall be 0.14 inches per foot.
3. All poles shall be hot dip galvanized per AASHTO M111.
4. Welding of structures shall be in accordance with the latest edition of the AWS D1.1 Structural Welding Code - Steel. All butt welds shall be ground flush with base metal.
5. See **Standard Plan J-21.20** for Electrical details.
6. Pedestrian signal displays mounted on the side of an octagonal (8 sided) traffic signal pole with a pole attachment angle other than 0°, 45°, 90°, 135°, 180°, 225°, 270°, or 315° shall utilize:
   - Type A mounting when two pedestrian heads are installed on the same signal pole.
   - Type B mounting when only one pedestrian signal head is mounted on a signal pole.
7. Junction Box serving the Standard shall preferably be located 5' - 0" (10' - 0" Max.) from the Standard.

RAMP METER SIGNAL STANDARD ⟨1⟩
SLIP BASE SHOWN

⟨1⟩ **BACKPLATES NOT SHOWN FOR CLARITY.**

NOTES

1. See **Standard Plan J-21.10** for Signal Standard Foundation Details.
2. Steel shaft shall be tapered either round or dodecagon (12-sided), 11-gage, 4 1/2" (in) O.D. at slipfitter. Taper shall be 0.14" (in) per foot.
3. All poles shall be hot-dip galvanized per **AASHTO M111**.
4. Welding of structures shall be in accordance with the latest edition of the **AWS D1.1 Structural Welding Code - Steel**. All butt welds shall be ground flush with base metal.
5. See **Standard Plan J-22.16** for Wiring and Electrical Details.
6. Junction Box serving the Standard shall be located no more than 10' - 0" (5' - 0" preferred) from the Standard.
7. A backplate shall be installed on the Upper Traffic Signal Head. Install a backplate on the Lower Traffic Signal Head only when required by the contract. Do not install retro-reflective tape on backplates.
8. For Sign Installation Details, see **Standard Plan G-30.10**.
9. For Elbow Mounting Details, see **Standard Plan J-28.45**. Verify barrier angle prior to fabricating elbow.
10. For Signal Head Mounting Details, see **Standard Plan J-75.10**.
11. Standard shall use slip base if installed closer than 4' (ft) from the face of guardrail.
12. Treat surrounding pole with galvanizing repair paint meeting the requirements of **Standard Specification 9-08.1(2)**. Apply two coats. Paint shall be dry before applying second coat.
13. Hand hole shall face toward roadway for Elbow Mount Barrier installations. For all other installations, hand hole shall face the opposite direction from the Upper Traffic Signal Head. Hand hole face shall remain accessible after pole and sign installation is complete.

NOTES

1. This structure has been designed according to the Fifth Edition 2009 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals. Basic wind velocity is 90 mph, Design Life/Recurrence Interval 50 years, and Fatigue Category III.
2. Foundations are designed for Type II, III, and SD Signal Standards with a maximum mast arm length of 65'.
3. Foundations are designed for Single Mast Arm Standards and Double Mast Arm Standards with 90° between arms. Special foundation design is required for Double Arm Standards where the angle between mast arms is other than 90°. For Double Mast Arm Standards with 90° between arms, use larger XYZ value for foundation depth selection.
4. Foundations not within the parameters of this standard require Special Design. Contact the WSDOT Bridge and Structures Office through the Engineer for Special Foundation Designs.
5. Foundations constructed within Ecology Embankments shall be increased in depth by the depth of the Ecology Embankment.
6. The top 2 feet of the foundation shall use a smooth form (such as paper or cardboard). After the concrete has cured, this entire form shall be removed.
7. For design parameters between the values listed in Table, depth requirements may be interpolated between the values provided.
8. Install Signal Foundation Identification Tag. See **Standard Plan J-26.15** for details.

ALTERNATE #2 - CONSTRUCTION METHOD
METAL (SUBSURFACE) FORM REQUIRED

When the existing soil will not retain a vertical face, over-excavate the foundation area and install a 36" or 48" diameter corrugated metal (pipe) form. The top of the corrugated metal form shall terminate 1 foot below final grade. Continue forming to full height using paper or cardboard form to achieve a smooth finish on final exposed cement concrete. Support the form as necessary to remain plumb.

Place the concrete foundation.

After concrete has cured, remove the entire paper or cardboard form portion.

Backfill with controlled-density fill or compacted borrow in accordance with **Standard Specification 8-20.3(2).**

RICHARD P. ZELDENRUST — STATE OF WASHINGTON — 21470 — STRUCTURAL ENGINEER — PROFESSIONAL ENGINEER

TOP VIEW
ADAPTOR 1 TOP PLATE

NOTES

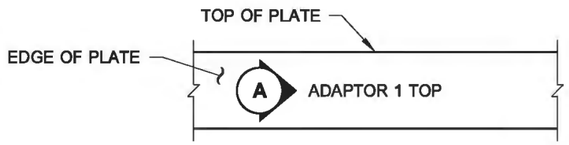

1. All material and workmanship shall be in accordance with the requirements of the Washington State Department of Transportation Standard Specifications for Road, Bridge, and Municipal Construction.
2. The analysis and design for Adaptors 1 and 2 have been done in accordance with AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals - Fifth Edition - Dated 2009, and Interims, using basic wind speed of 90 MPH and 50 years of design life.
3. Adaptors' parameters are based on field data and existing signal standard anchor bolts and bolt circles. Adaptor 1 shall be used for 15' (ft) thru 45' (ft) mast arm signal standards and Adaptor 2 for 46' (ft) thru 65' (ft).
4. **Adaptors shall only be used for temporary installation of knocked down signal standards.**
5. Materials specifications:

All structural steel, except as otherwise noted	**ASTM A572 GR. 50 OR ASTM A588**
Pipes	**ASTM A53 GR. B OR A500 GR. B**
Connecting/clamping bolts	**AASHTO M 164 (ASTM A325)**
Nuts	**AASHTO M 291 (ASTM A263) GRADE DH**
Washers	**AASHTO M 293 (ASTM F436)**

6. All bolts, rods, and related hardware shall be galvanized after fabrication per ASTM F2329.
7. Steel surfaces shall be galvanized after fabrication in accordance with AASHTO M 111.
8. Install and secure adaptor to existing support anchor bolts. Then install signal standard on adaptor top plate. Rake to be plumb after all load has been placed.
9. All holes in top and bottom plates of Adaptor 1 and Adaptor 2 are thru holes. See engraved or stamped text for bolt hole diameter.

FOUNDATION REINFORCEMENT DETAIL

CONCRETE CAST DIRECTLY AGAINST UNDISTURBED EARTH, DRILLED SHAFT

ALTERNATE #1

FOUNDATION REINFORCEMENT AND BACKFILL DETAIL

4 CONCRETE CAST WITHIN A CORRUGATED METAL PIPE STAY-IN-PLACE FORM

ALTERNATE #2

1. CONDUIT SIZE AND QUANTITY AS SHOWN IN THE CONTRACT; CAP BOTH ENDS
2. CLAMP CONDUCTOR TO STEEL REINFORCING WITH LISTED CONNECTOR SUITABLE FOR USE EMBEDDED IN CONCRETE
3. PAPER OR CARDBOARD FORM SHALL NOT STAY-IN-PLACE

NOTES

1. This structure has been designed according to the Fifth Edition 2009 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals: Basic wind velocity 90 mph, Design Life/Recurrence Interval 50 years, and Fatigue Category III.
2. Foundations are designed for Type IV and V Strain Pole Standards with a maximum mast arm length of 16' - 0".
3. Foundations not within the parameters of this standard require Special Design. Contact the WSDOT Bridge and Structures Office through the Engineer for Special Foundation Designs.
4. Foundations constructed within Ecology Embankments shall be increased in depth by the depth of the Ecology Embankment.
5. The top 2 feet of the foundation shall use a smooth form (such as paper or cardboard). After the concrete has cured, this entire form shall be removed.
6. See **Standard Plan J-27.15** for Strain Pole Standards Type IV and V details.
7. Install Signal Foundation Identification Tag. See **Standard Plan J-26.15** for details.

ALTERNATE #2 - CONSTRUCTION METHOD
METAL (SUBSURFACE) FORM REQUIRED

When the existing soil will not retain a vertical face, over-excavate the foundation area and install a 36" or 48" diameter corrugated metal (pipe) form. The top of the corrugated metal form shall terminate 1 foot below final grade. Continue forming to full height using a paper or cardboard form to achieve a smooth finish on final exposed cement concrete. Support the form as necessary to remain plumb.

Place the concrete foundation.

After concrete has cured, remove the entire paper or cardboard form portion.

Backfill with controlled-density fill or compacted borrow in accordance with **Standard Specification 8-20.3(2).**

NOTES

1. This plan depicts the Steel Light Standard types and terms commonly referred to in the Contract. All Steel Light Standards are fabricated in accordance with the Standard Specifications and the Contract Provisions.
2. The Luminaire Pole height shall not exceed 50' (**H1**).
3. Slip Bases shall not be installed on 50' (**H1**) poles with Double Mast Arms, nor on poles weighing more than 1000 lbs.
4. The optimal location of the Luminaire head is over the edge of the traveled way. Based on the placement of the Steel Light Standard foundation, the position of the Luminaire head may vary. See **Standard Plan J-28.22.**
5. Light Standard mast arm orientation is typically perpendicular to roadway centerline.
6. See **Standard Plan J-28.50** for Hand Hole details.

3. See **Standard Plan J-28.50** for pole base and hand hole details.

TAPER NOTE

End Taper (on approach from opposing traffic):

20' (longitudinal) = use on one-way roadways or where the Light Standard is not in the Design Clear Zone of the opposing traffic.

6H:1V min. taper = use when the Light Standard is in the Design Clear Zone of the opposing traffic.

STRAP TEMPLATE ASSEMBLY

NOTES

1. See **Standard Plan J-28.40** for Luminaire Pole base mounting details.
2. The Strap Templates shall be held in place by nuts, 6" (in) from the top of the foundation and 3" (in) from the bottom of the anchor bolts. Eighteen heavy duty hex nuts and six round washers are required for a slip base assembly. Eighteen heavy duty hex nuts and six plate washers are required for a fixed base assembly.
3. Use Steel Light Standard Foundation **Type A** on level ground or slopes not exceeding 4H : 1V. Use **Type B** for slopes steeper than 4H : 1V, but not exceeding 2H : 1V. Slopes steeper than 2H : 1V shall require a special design.
4. These foundations are designed for a minimum of 2000 PSF **(TYPE A)** or 1500 PSF **(TYPE B)** allowable lateral bearing pressure for the soil. A special foundation shall be required for soil with allowable lateral bearing pressure lower than 1500 PSF.
5. The Luminaire Pole height shall not exceed 50' (ft) (**H1**).
6. Slip bases shall not be installed on 50' (ft) (**H1**) poles with Double Mast Arms, nor on poles weighing more than 1000 lbs.
7. Slip bases are required on poles installed inside the Design Clear Zone, and on poles installed behind traffic barrier that are within the traffic barrier deflection zone.
8. Foundations constructed within Media Filter Drains shall be increased in depth by the depth of the Media Filter Drain.
9. Exposed portions of the foundation shall be formed to create a Class 2 surface finish. All forming shall be removed upon completion of foundation construction.
10. For excavation, concrete placement, and backfill options, see METHOD 1 and METHOD 2 on Sheet 2 of 2.
11. The anchor bolts shall be high-strength steel, manufactured from ASTM F1554 Grade 105, with heavy hex nuts and hardened washers. Galvanize the anchor bolts according to ASTM F2329.
12. The foundation shall be grounded in accordance with the requirements of **Standard Specification 8-20.3(4).**
13. See **Standard Plans C-8b** and **C-85.14** for steel light standards on traffic barrier.

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016
DRAWN BY: LISA CYFORD

(CASE A SHOWN)

METHOD 1

NO SUBSURFACE FORM

This option is used only when the existing soil in the hole will remain standing and the cement concrete can be placed without causing the soil to collapse. Concrete shall be cast directly against undisturbed soil.

Auger the hole for the foundation. Use a paper or cardboard form to achieve a smooth finish on the final exposed cement concrete. Support the form as necessary to remain plumb.

See **Standard Plans J-28.24** and **J-28.26** for maximum heights of exposed foundation when no embankment widening is to be installed.

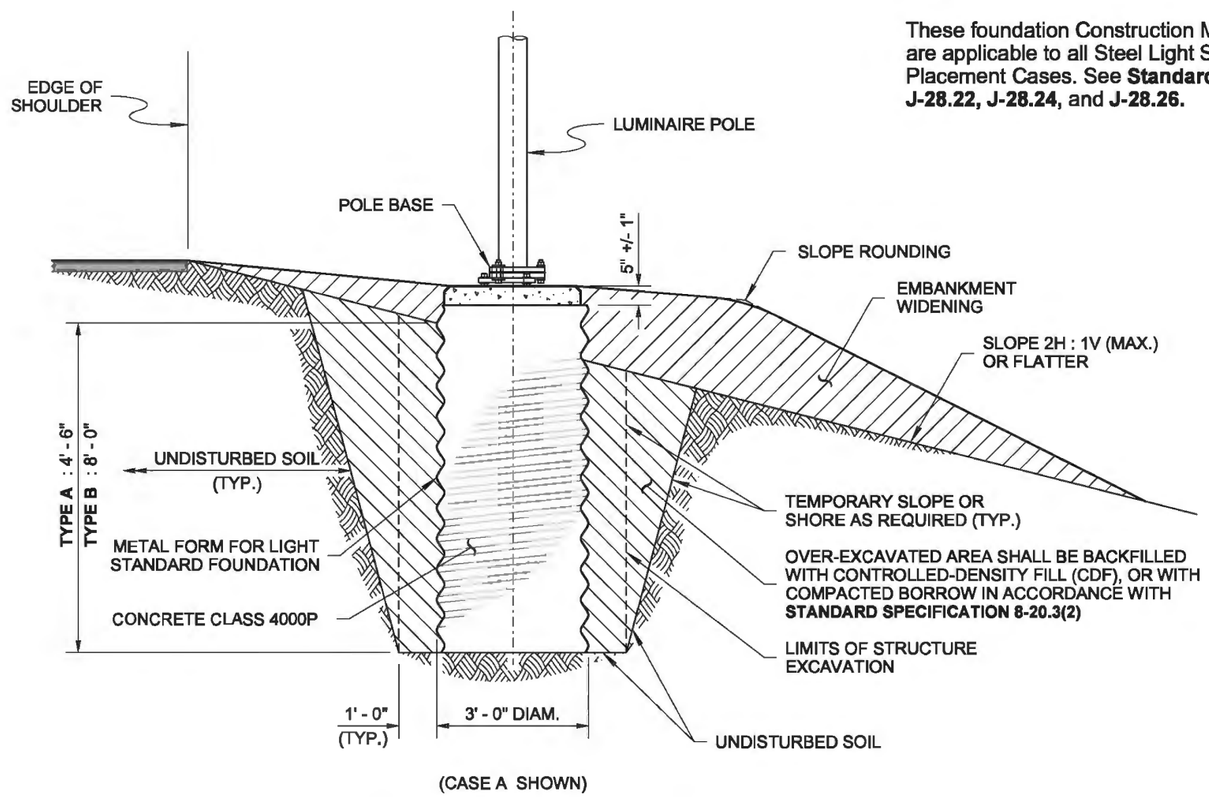

Place the concrete foundation.

After concrete has cured, remove the paper or cardboard form portion.

Construct the embankment widening (if required).

NOTE

These foundation Construction Methods are applicable to all Steel Light Standard Placement Cases. See **Standard Plans J-28.22, J-28.24,** and **J-28.26.**

(CASE A SHOWN)

METHOD 2

METAL (SUBSURFACE) FORM REQUIRED

When the existing soil will not retain a vertical face, over-excavate the foundation area and install a 36" (in) diameter corrugated metal (pipe) form. The corrugated metal form shall not extend more than 5" (in) +/- 1" (in) below any portion of the foundation that will remain exposed upon final grading. Continue forming to full height using a paper or cardboard form to achieve a smooth finish on final exposed cement concrete. Support the form as necessary to remain plumb.

See **Standard Plans J-28.24** and **J-28.26** for maximum heights of exposed foundation when no embankment widening is to be installed.

Place the concrete foundation.

After concrete has cured, remove the paper or cardboard form portion.

Backfill with controlled-density fill or compacted borrow in accordance with **Standard Specification 8-20.3(2).**

Construct the embankment widening (if required).

NOTES

1. The purpose of this plan is to provide the details for retrofitting a 4-bolt frangible base with a slip base assembly.
2. Existing anchor bolts shall be inspected for corrosion, thread damage, and galvanizing. To minimize galvanic corrosion between dissimilar metals, ensure galvanizing remains intact while installing aluminum luminaire.
3. After bolting the bottom slip plate assembly to the foundation, fill the slotted bolt holes with mastic per **Standard Specification 9-08.7**.
4. Grade around the foundation to ensure the stub height does not exceed 3 7/8" (in). For grading requirements, see **Standard Plan J-28.22**.
5. Removal of the frangible base from the existing base plate is required.
6. Misaligned anchor bolts shall be removed and replaced.
7. This adaptor shall be used only on luminaire poles that contain a handhole. Replace standards and foundation when the handhole is located in the frangible base.
8. Galvanize the anchor plate, bottom slip plate, and top slip plate after fabrication according to **ASTM A123**.
9. Galvanize all hardware according to **ASTM F2329**.

ALTERNATE # 2

NOTES

1. These Foundations are designed for a minimum of 1,500 PSF allowable lateral bearing pressure for the soil. A Special Foundation shall be required for soil with allowable lateral bearing pressure lower than 1,500 PSF.
2. These Foundations are designed for installation on level ground, or on sloping ground, not to exceed 2 : 1 slopes. Slopes steeper than 2 : 1 require a special design.
3. Foundations constructed within ecology embankments shall be increased in depth, by the depth of the ecology embankment.
4. Foundations not within the parameters of this standard require Special Design. Contact the WSDOT Bridge and Structures Office through the Engineer for Special Foundation Designs.
5. The top 2' - 0" of the foundation shall use a smooth form (such as paper or cardboard). After the concrete has cured, this entire form shall be removed.
6. Galvanized Welded Wire Mesh shall be 2 mesh per lineal inch, 0.0625" diam. wire, with 0.4375" overlap. Contractor to form fit and install.

DESIGN CRITERIA:

This structure has been designed according to the Fifth Edition **2009 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.** Basic wind velocity is 90 MPH. Design Life/Recurrence Interval 50 years and Fatigue Category III.

WIND VELOCITY:

90 MPH
Maximum Pole Deflection shall not exceed 0.7" in 30 MPH and 1.4" in 70 MPH wind.

LOAD CASE # 1

Camera (1) - EPA = 4.00 sq. ft. @ 2' - 0" above pole top, and:

Dish (1) - 1' - 0" diameter @ pole top level.

LOAD CASE # 2

Camera (1) - EPA = 4.00 sq. ft. @ 2' - 0" above pole top, and:

Camera (2) - EPA = 0.54 sq. ft. each @ 1' - 0" and 2' - 0" from pole top, and:

NEMA Cabinet (2) - EPA = 1.33 sq. ft. each @ 3' - 8" from pole top, install both NEMA cabinets back to back, and:

Radio Equipment (2) - EPA = 2.25 sq ft. each @ 2' - 0" and 9' - 0" from pole top.

EPA = Effective Projected Area

ALTERNATE #2 - CONSTRUCTION METHOD

① Shoring or Extra Excavation as Required. Excavated area shall be backfilled with Controlled-Density Fill or with soil in accordance with **Standard Specification 8-20.3(2).**

CAMERA POLE FOUNDATION DETAILS

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

DRAWN BY: LISA CYFORD

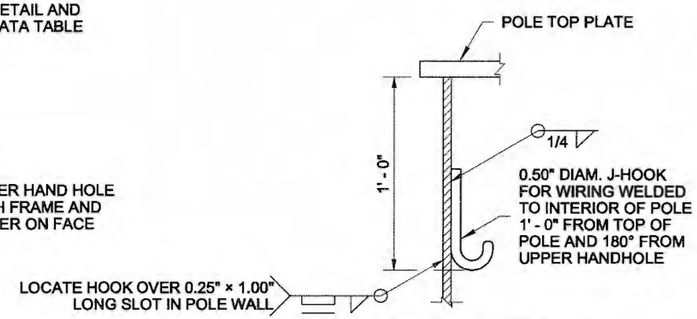

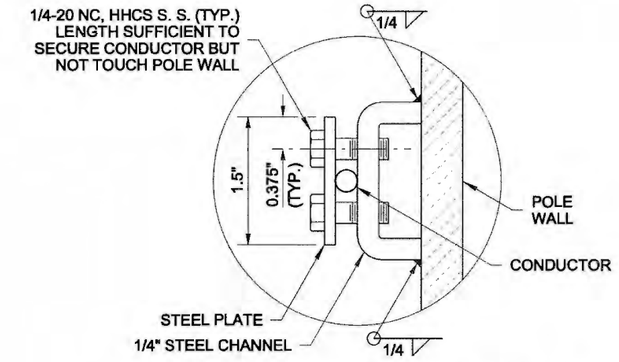

NOTES

1. Verify Pole Top Plate, Camera Mount Plate, Bolt Circle, and Bolt Holes are adequate for the required Camera prior to releasing poles for manufacturing.
2. Steel shall be galvanized after fabrication per AASHTO M111. Hardware shall be galvanized per AASHTO M232. Fasteners less than 0.50" (in.) diameter shall be stainless or brass.
3. Attach Camera to Camera Mount Plate using four (4) 3/8"-16 UNC × 1.75" stainless steel bolts with eight (8) stainless steel washers and four (4) lock-nuts with nylon inserts, or as approved by the Camera Supplier.
4. For Ground Mount Details, see **Standard Plan J-29.10.** For Elbow Mount Details, see **Standard Plan J-29.16.**

DESIGN CRITERIA:

This structure has been designed according to the Fifth Edition **2009 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals**. Basic wind velocity is 90 MPH. Design Life/Recurrence Interval 50 years.

WIND VELOCITY:

90 MPH

Maximum Pole Deflection shall not exceed 0.7" in 30 MPH and 1.4" in 70 MPH wind.

LOAD CASE #1:

Camera (1) - EPA = 4.00 sq. ft. @ 2' - 0" above pole top, and:

Dish (1) - 1' - 0" diameter @ pole top level.

LOAD CASE #2:

Camera (1) - EPA = 4.00 sq. ft. @ 2' - 0" above pole top, and:

Camera (2) - EPA = 0.54 sq. ft. @ 1' - 0" and 2' - 0" from pole top, and:

NEMA Cabinet (2) - EPA = 1.33 sq. ft. @ 3' - 8" from pole top, install back-to-back NEMA Cabinets, and:

Radio Equipment (2) - EPA = 2.25 sq. ft. each @ 2' - 0" and 9' - 0" from pole top.

EPA = Effective Projected Area

PLAN VIEW

PLAN VIEW

(REINFORCING NOT SHOWN FOR CLARITY)

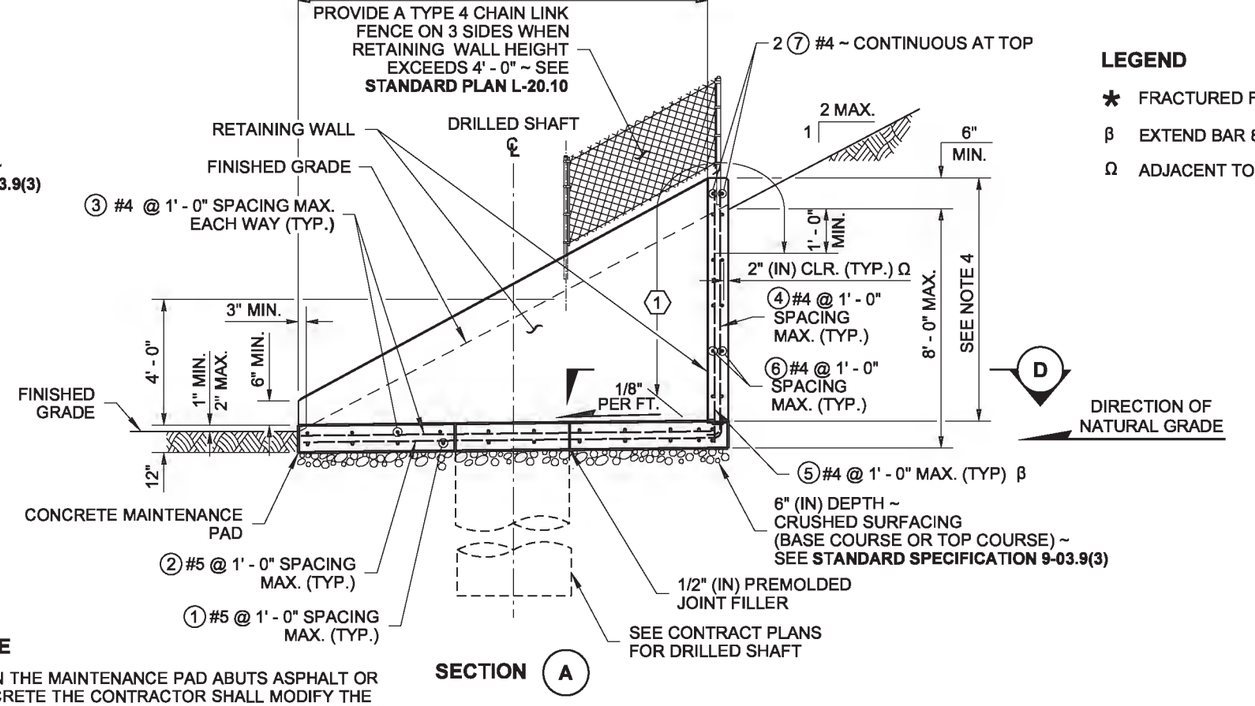

ELEVATION VIEW

4" (IN) MAINTENANCE PAD

ON SLOPES LEVEL TO 10H : 1V

NOTE: CONCRETE FOR 4" (IN) THICK PAD SHALL BE CLASS 3000

SECTION (A)

12" (IN) MAINTENANCE PAD

ON SLOPES STEEPER THAN 10H : 1V

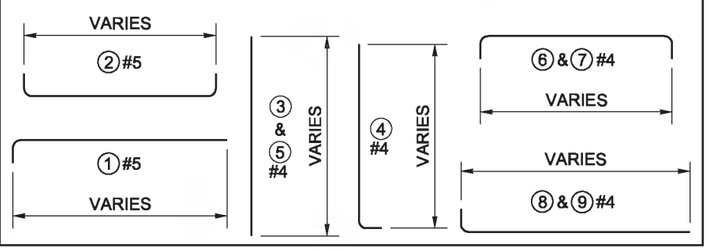

NOTE: CONCRETE FOR 12" (IN) THICK PAD SHALL BE CLASS 4000
(GROUND RING NOT SHOWN FOR CLARITY)

KEY NOTE

① LIMITS OF PIGMENTED SEALER. TYPICAL FOR ALL RETAINING WALLS.

REINFORCING STEEL BENDING DIAGRAM

SEE **STD. SPEC. 9-07.1(2)** FOR BENDING DIAM. ALL DIMENSIONS ARE OUT TO OUT

NOTE

WHEN THE MAINTENANCE PAD ABUTS ASPHALT OR CONCRETE THE CONTRACTOR SHALL MODIFY THE FINISHED GRADE 1" (IN) MINIMUM TO 2" (IN) MAXIMUM.

NOTES

1. All material and workmanship shall be in accordance with the **Standard Specifications**.
2. The maintenance pad and retaining walls have been designed to meet the requirements of the **AASHTO LRFD Bridge Design Specifications, 7th Edition, 2014**.
3. Concrete for 12" (in) thick maintenance pad shall be class 4000. Concrete for 4" (in) thick maintenance pad shall be class 3000.
4. Height of wall varies to match slope of finished grade. Contractor shall field-determine wall height at each maintenance pad location and obtain approval from the Engineer prior to proceeding with construction.
5. All exposed corners shall have 3/4" (in) chamfers.
6. For grounding details not shown, see **Standard Plan J-60.05**.
7. Where concrete cover (clear) thickness is not shown, the clear distance from the face of the concrete to the face of any reinforcing steel shall be as follows: 3" (in) for bottom of maintenance pad, 2" (in) for top of maintenance pad, and 1 1/2" (in) at all other locations.
8. Falsework shall be carefully released to prevent impact or undue stress on the structure.
9. See Contract Plans for number, type, and location of conduits and conductors.
10. Contractor shall orient the maintenance pad to align with the direction of natural grade as shown. Engineer's approval of maintenance pad slope and orientation required prior to proceeding with construction.
11. Use 4" (in) Maintenance Pad on level ground or slopes not exceeding 10H : 1V. Use 12" (in) Maintenance Pad on slopes steeper than 10H : 1V. Slopes steeper than 2H : 1V shall require a special design.

LOCKING LID STANDARD DUTY JUNCTION BOX
(CONDUITS NOT SHOWN)

SECTION (D)
PERSPECTIVE VIEW

NOTES

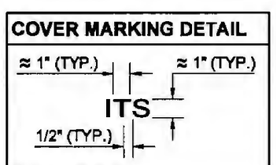

1. All box dimensions are approximate. Exact configurations vary among manufacturers.
2. Minimum lid thickness shown. The diamond pattern shall be a minimum of 28% of the overall thickness. Junction Boxes installed in sidewalks, walkways, and shared-use paths shall have a slip-resistant coating on the lid and lip cover plate, and shall be installed with the surface flush with and matched to the grade of the sidewalk, walkway, or shared-use path. The non-slip lid shall be identified with permanent markings on the underside, indicating the type of surface treatment (see Contract Documents for details) and the year of manufacture. The permanent marking shall be 1/8" inch line thickness formed with a stainless steel weld bead and shall be placed prior to hot-dip galvanizing.
3. Lid support members shall be 3/16" minimum thick steel C, L, or T shape, welded to the frame.
4. A 1/4-20 NC × 3/4" stainless steel ground stud shall be welded to the bottom of the lid; include (2) stainless steel nuts and (2) stainless steel flat washers.
5. Bolts and nuts shall be liberally coated with anti-seize compound.
6. Equipment Bonding Jumper shall be # 8 AWG min. × 4' of tinned braided copper.
7. The System Identification letters shall be 1/8" line thickness formed by engraving, stamping, or with a S. S. weld bead. See Cover Marking detail. Grind off diamond pattern before forming letters. For System Identification details, see **Standard Specification 9-29.2(4).**
8. When required in the Contract, provide a 10" x 27 1/2", 10 gage divider plate, complete, with fasteners, in each Type 2 Junction Box where specified.
9. When required in Contract, provide a 12" deep extension for each Type 2 Junction Box where specified.
10. See the Standard Specifications for alternative reinforcement and class of concrete.
11. Headed Anchor Shear Studs must be welded to the Steel Cover Lip Plate and wire tied in two places to the vertical Welded Reinforcement Wire when in contact with each other. Wire tie all other Headed Anchor Shear Studs to the horizontal Welded Reinforcement Wire.
12. Lid Bolt Down Attachment Tab provides a method of retrofitting by using a mechanical process in lieu of welding. Attachment Tab shown depicts a typical component arrangement; actual configurations of assembly will vary among manufacturers. See approved manufacturers' shop drawings for specifics.
13. Unless otherwise noted in the plans or approved by the Engineer, Junction Boxes, Cable Vaults, and Pull Boxes shall not be placed within the sidewalks, walkways, shared use paths, traveled ways or paved shoulders. All Junction Boxes, Cable Vaults, and Pull Boxes placed within the traveled way or paved shoulders shall be Heavy-Duty.
14. Distance between the top of the conduit and the bottom of the Junction Box lid shall be 6" min. to 8" max. for final grade of new construction only. See **Standard Specification 8-20.3(5).** Where adjustments are to be made to existing Junction Boxes, or for interim construction stages during the contract, the limits shall be from 6" min. to 10" max. See **Standard Specification 8-20.3(6).**

CAPACITY ~ CONDUIT DIAM.		6"	12"	24"

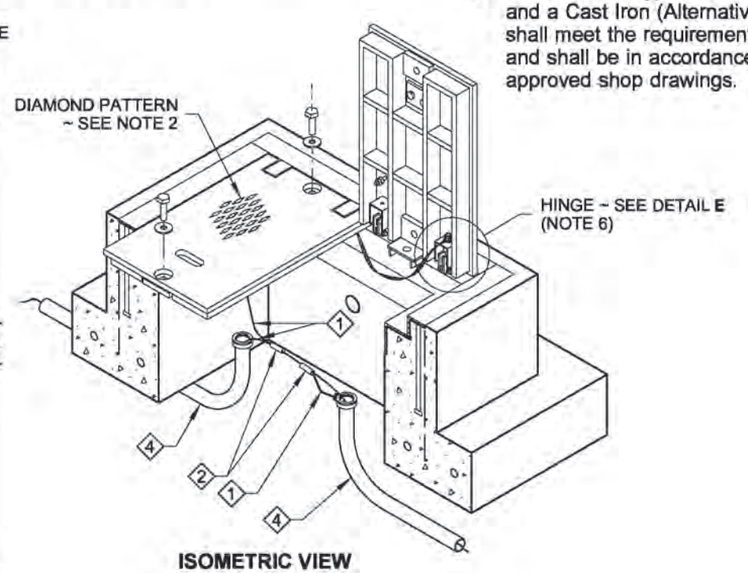

NOTES

1. All box dimensions are approximate. Exact configurations vary among manufacturers.
2. All lid thicknesses are minimum. The diamond pattern shall be 3/32" minimum thickness.
3. Lid perimeter shall bear on frame. Mill to bearing seat and lid perimeter for full even contact after fabrication of frame and lid. Lid and frame units with uneven bearing will be rejected.
4. The installed lid and frame shall fit with full even contact around the perimeter of a junction box after installation. Care shall be taken to prevent debris accumulation on the contact surfaces.
5. A 1/4-20 NC × 1" S. S. ground stud shall be welded to the bottom of each lid: include (2) each S. S. nuts and (3) each S. S. flat washers.
6. The hinges shall allow the lids to open 180°.
7. Bolts and nuts shall be liberally coated with anti-seize compound.
8. Connect Equipment Bonding Jumper to ground stud on lid. As an alternative to ground stud connection, the Equipment Bonding Jumper shall be attached to the front face of the hinge pocket with a 5/16-20 NC × 1" S. S. bolt, (2) each S. S. nuts, and (3) each S. S. flat washers. Equipment bonding jumper shall be #8 AWG min. × 4' of tinned braided copper.
9. The System Identification letters shall be 1/8" line thickness formed by a S. S. weld bead. See Cover Marking details. Grind off diamond pattern before forming letters. Ductile iron lid lettering shall be recessed , 1/8" line thickness. See **Standard Specification 9-29.2(4)** for details.
10. See **Standard Specification 9-29.2(1)B** for class of concrete.
11. Unless otherwise noted in the plans or approved by the Engineer, Junction Boxes, Cable Vaults, and Pull Boxes shall not be placed within the traveled way or paved shoulders. All Junction Boxes, Cable Vaults, and Pull Boxes placed within the traveled way or paved shoulders shall be Heavy-Duty. Heavy-Duty Junction Boxes shall not be installed in sidewalks, walkways, and shared use paths.
12. Distance between the top of the conduit and the bottom of the Junction Box lid shall be 6" min. to 8" max., for final grade of new construction only. See **Standard Specification 8-20.3(5).** Where adjustments are to be made to existing Junction Boxes, or for interim construction stages during the contract, the limits shall be from 6" min. to 10" max. See **Standard Specification 8-20.3(6).**
13. Junction Box Types 4, 5, or 6 may be equipped with Ductile Iron (Alternative) Lid(s) and a Cast Iron (Alternative) Frame. Junction box shall meet the requirements of **Std. Spec. 9-29.2** and shall be in accordance with approved shop drawings.

COVER MARKING DETAIL

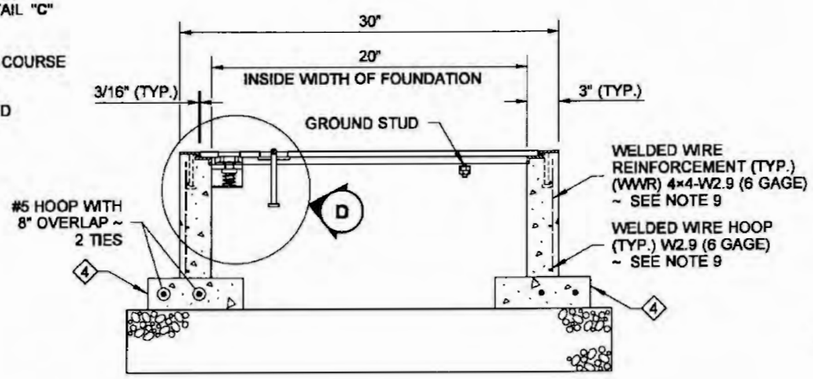

SEE NOTE 8

NOTES

1. All box dimensions are approximate. Exact configurations vary among manufacturers.
2. Minimum lid thicknesses are shown. The diamond pattern shall be a minimum of 28% of the overall thickness. Junction Boxes installed in sidewalks, walkways, and shared-use paths shall have a slip-resistant coating on the lid and lip cover plate and shall be installed with the surface flush with and matched to the grade of the sidewalk, walkway, or shared-use path. The non-slip lid shall be identified with permanent markings on the underside, indicating the type of surface treatment (see Contract Documents for details) and the year of manufacture. The permanent marking shall be 1/8" inch line thickness formed with a stainless steel weld bead and shall be placed prior to hot-dip galvanizing.
3. Lid support members shall be 3/16" min. thick steel C, L, or T shape, welded to the frame. Exact configurations vary among manufacturers.
4. A 1/4-20 NC × 3/4" S. S. ground stud shall be welded to the bottom of each lid; include (2) S. S. nuts and (2) S. S. flat washers.
5. The hinges shall allow the lids to open 180°.
6. Bolts and nuts shall be liberally coated with anti-seize compound.
7. Connect Equipment Bonding Jumper to ground stud on lid. As an alternative to the ground stud connection, the Equipment Bonding Jumper shall be attached to the front face of the hinge pocket with a 5/16-20 NC × 3/4" S. S. bolt, (2) each S. S. nuts, and (2) each S. S. flat washers. Equipment Bonding Jumper shall be #8 AWG min. × 4' of tinned braided copper.
8. The System Identification letters shall be 1/8" line thickness formed by engraving, stamping, or with a S. S. weld bead. See Cover Marking detail. Grind off diamond pattern before forming letters. See **Standard Specification 9-29.2(4)** for details.
9. See the Standard Specifications for alternative reinforcement and class of concrete.
10. See **Standard Plan J-40.10** for Welded Wire Reinforcement and Headed Anchor Shear Stud attachment details.
11. Capacity ~ conduit diameter = 24"
12. Lid Bolt Down Attachment Tab provides a method of retrofitting by using a mechanical process in lieu of welding. Attachment Tab shown depicts a typical component arrangement; actual configurations of assembly will vary among manufacturers. See approved manufacturers' shop drawing for specifics.
13. Unless otherwise noted in the plans or approved by the Engineer, Junction Boxes, Cable Vaults and Pull Boxes shall not be placed within the sidewalk, walkway, shared use path, traveled way or paved shoulders. All Junction Boxes, Cable Vaults, and Pull Boxes placed within the traveled way or paved shoulders shall be Heavy-Duty.
14. Distance between the top of the conduit and the bottom of the Junction Box lid shall be 6" min. to 8" max. for final grade of new construction only. See **Standard Specification 8-20.3(5).** Where adjustments are to be made to existing Junction Boxes, or for interim construction stages during the contract, the limits shall be from 6" min. to 10" max. See **Standard Specification 8-20.3(6).**

NOTES

1. Junction Box shall be constructed of 12-gage, Type 304 stainless with steel welded seam construction. Finish shall be # 2B for backbox and # 4 for the cover. Mounting Tabs shall be constructed of 12-gage, Type 304 stainless steel.
2. Holes for conduit(s) shall be field drilled or punched in the box ends. See **Section B**.
3. Fittings shall be UL listed and CSA-certified concrete tight on the outside of the Junction Box conduit connection. Use an insulated, grounded end bushing on the inside for GRS conduit. Use a sealing lock nut and a rigid PVC conduit bushing on the inside for PVC conduit.
4. The System Identification letters shall be 1/8" line thickness formed by engraving, stamping, or with a stainless steel weld bead. **See Standard Specification 9-29.2(4)** for details.
5. Liberally coat the threads of the cover fasteners with anti-seize compound during construction and before final closure.
6. Junction Box shall only be used in barriers with stationary-forms. If Slip-Form Traffic Barrier is required, use Conduit shown in the Alternative PVC Conduit detail.
7. Conduit Capacity = 8" (4" per end).
8. Conduits shall only enter Junction Box from ends as shown.
9. When converting RMC to PVC in Stationary-Form Barriers, route a # 8 Stranded, Non-Insulated Grounding Conductor along Conduit, secure Conductor to Conduit with clamp as shown on Conduit Deflection Fitting "B" detail, convert RMC to PVC in Stationary-Form Barrier (per **Standard Plan J-60.11**): omit Conductor when this detail is not used.

NOTES

1. Junction Box shall be constructed of 12- gage, Type 304 stainless steel with welded seam construction. Finish shall be # 2B for backbox and # 4 for the cover. Mounting Tabs shall be constructed of 12-gage, Type 304 stainless steel.
2. Holes for conduit(s) shall be field drilled or punched in box ends. See SIDE VIEW.
3. Fittings shall be UL listed and CSA-certified concrete tight on the outside of the Junction Box conduit connection. Use an insulated, grounded end bushing on the inside for GRS conduit.
4. The System Identification letters shall be 1/8" line thickness formed by engraving, stamping, or with a stainless steel weld bead. See **Standard Specification 9-29.2(4)** for details.
5. Liberally coat the threads of the cover fasteners with anti-seize compound during construction and before final closure.
6. Detail shown for box installation is Slip-Form Traffic Barrier.
7. Conduit capacity = 8".
8. Conduits shall enter the Junction Box from the ends as shown.
9. This Junction Box type shall not be surface mounted. For Surface-Mounted Junction Boxes, see **Standard Plans J-40.38 and J-40.39.**
10. Equipment Bonding Jumper shall be # 8 AWG (min.) × 1 foot of tinned, braided copper.
11. When converting RMC to PVC in Stationary-Form Barriers, route a # 8 Stranded, Non-Insulated Grounding Conductor along Conduit, secure Conductor to Conduit with clamp as shown on Conduit Deflection Fitting "B" detail, convert RMC to PVC in Stationary-Form Barrier (per **Standard Plan J-60.11**): omit Conductor when this detail is not used.
12. When additional Conduits are required, Bonding and Grounding wiring shall match configuration as shown in the perspective view. See Contract for number and size of additional Conduits.
13. Apply a 3/16" bead of caulk around Junction Box body and Adjustable Face to provide a proper seal prior to installation.

NOTES

1. Drilling through reinforcing steel is not allowed. If steel is hit while drilling, the location shall be moved and the abandoned hole filled with grout conforming to **Standard Specification 6-02.3(20).**
2. Mount the stainless steel support using an approved resin-bonded anchor system installed per manufacturer's recommendation. Anchor bolt embedment shall be 4 1/2" minimum. Resin-bonded anchors shall be stainless steel and shall be 3/8" diameter. Expansion Anchors are not allowed.
3. There shall be a minimum of 3" edge distance to the centerline of anchor holes in the concrete.
4. See **Standard Plan J-60.13** for Stainless Steel Channel details.
5. The System Identification letters on the box lid shall be 1/8" line thickness formed by engraving, stamping, or with a stainless steel weld bead. See System Identification Detail and **Standard Specifications 9-29.2(4).**
6. Junction Box shall be dimensioned as shown in the Contract. If the conduit sizes shown in the Contract are changed, the box dimensions shall be revised in accordance with **NEC 314.28** using the 8 times multiplier for length and width dimensions.
7. Equipment Bonding Jumper shall be # 8 AWG (min.) × 1 foot of tinned, braided copper.
8. Fittings shall be UL listed and CSA-certified watertight on the outside of the Junction Box conduit connection. An insulated grounded end bushing shall be used to terminate Rigid Metal Conduit.
9. Junction Box shall be constructed of 12-gage, Type 304 stainless steel with welded seam construction and # 4 finish. Mounting Flange shall also be 12-gage, Type 304 stainless steel.

SAWCUT AND CONDUIT CONNECTION

DETAIL "B"

LOOP INSTALLATION NOTES

1. Install the Junction Box and the stub-out conduit with PVC sleeve. Conduit for the loop stub-out shall be as required in the conduit size table shown on sheet 1 of this set.
2. Lay out loops and loop lead-ins to miss cracks/joints in road, when possible. Maintain 18" minimum clearance from manholes and valve boxes.
3. The opening around the loop stub shall be patched with matching paving material if opened larger than PVC sleeve + 2".
4. Sawcut the loop slots and the lead-in slots. Wash/dry cuts. File edges to remove burr of all saw-cuts into stub out sleeve.
5. Lay out the loop wire starting at the Junction Box, allowing 5' minimum slack.
6. Install the wire in the loop slot as shown.
7. Finish laying out the wire at the Junction Box and identify the leads with the loop number, the "S" for start and the "F" for the finish, the loop series number, and the loop lead-in conductor number.
8. Twist each pair of the lead-in wires a minimum of two times per foot each foot, from the loop to the Junction Box. Reverse the direction of the twist for each successive pair installed. Seal loops/sawcuts.
9. Construct a supplemental splice containing any series loop connect-ions in the adjacent junction box as required in the plans. Supplemental splices are subject to the same requirements shown for the loop lead-in and the shielded cable splice.
10. Splice the loop lead-ins to the shielded cable as noted in the Contract.
11. All loop circuits shall be tested per **Standard Specifications 8-20.3(14)D** once installation is complete.
12. Existing stubouts shall be upgraded as necessary to conform to the conduit size table shown on sheet 1.
13. All loop lead-in sawcuts parallel to lane edge shall be at least 12" from edge of pavement and within six inches outside of lane or fog line when possible. Maintain 12" separation between parallel cuts or joints.
14. The loop stub-out sleeve shall have an inside diameter 1" larger than the outside diameter of the End Bell Bushing. Plug conduit and fill sleeve with sand untill loops are installed to keep out Hot Asphalt during paving operations.

PLAN VIEW

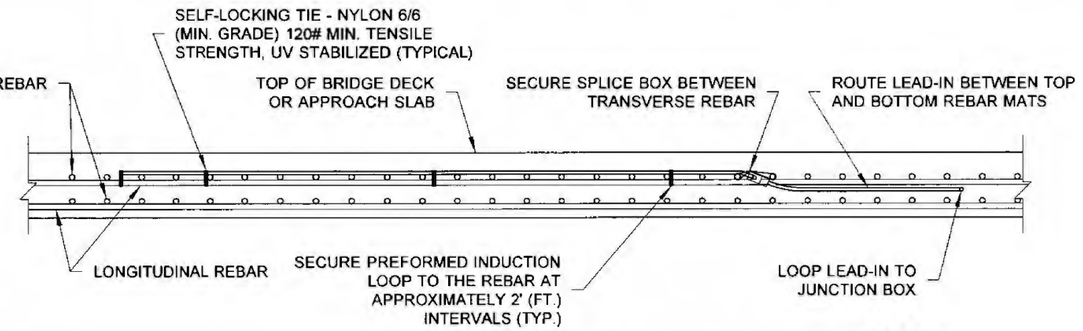

WIRING DIAGRAM FOR PREFORMED INDUCTION LOOP

PLAN VIEW

NOTES

1. Installation of signal detection loops in the bridge deck shall be cast-in-place and installation by saw cutting an existing bridge deck shall not be allowed. **This plan is intented for new construction only (not allowed for existing structures).**
2. For Supplemental Splice in adjacent junction box, see Splice Detail, per **Standard Plan J-50.15.**
3. Preformed loops shall conform to the layouts, numbering details, marking requirements, and wiring diagrams of **Standard Plan J-50.12** for the number and types of loops shown in the Contract Plans.
4. Loops shall be tested immediately prior to pouring concrete, per **Standard Specification 8-20.3(14)D.**
5. Layout Preformed loops and loop lead-ins to maintain 1' (ft.) clearance from joints.
6. Construct a supplemental splice containing any series loop connections in adjacent Junction Box as required in the Plans. Supplemental splices are subject to the same requirements shown for the loop lead-in and the shielded cable splice, as shown in **Standard Plan J-50.12**.
7. Barrier Junction Box ~ 8" × 8" × 18" NEMA 4X in stationary-form barrier, adjustable NEMA 3R in slip-form barrier. (Junction Box can be recessed up to 1/8".) See **Standard Plan J-40.36 or J-40.37**.
8. For installation of Junction Box in the sidewalk, see **Standard Plan J-40.40.**

SECTION (A)

LOOP SAW CUT DETAIL

SHOULDER NOTCH

DETAIL (B)

NOTES

1. See **Standard Plan J-50.30** for Piezo axle sensor General Installation instructions, and Modified Type 2 Loop wiring details.
2. The contractor shall notify the Statewide Travel and Collision Data Office (STCDO) (formerlyTDO) a minimum of five working days prior to the scheduled site installation. An inspector from the WSDOT STCDO shall be on site for all phases of installation.
3. The loop inductance of two loops within the same lane shall be within 20 micro henries of each other. all piezo ohms readings shall be O\L from shield to center conductor. See piezo specifications for piezo capacitance readings.
4. The loops and axle sensors shall be cut in the final lift of asphalt after lane striping is completed. All PTR loops shall be spaced @16 ft. leading edge to leading edge.
5. For concrete pavement lanes with asphalt shoulders, install all of the piezo sensors and splices in the concrete lane. Also, for concrete lanes, install the loops 4" and 6" away from the expansion joints.
6. The shoulder notch length along the roadway shall be 4" or the conduit diameter plus 2" or whichever is larger. The shoulder notch width perpendicular to the roadway shall be the conduit size plus 1/4".
7. After all sensor leads are installed, seal the end of the conduit with conduit sealant. Use asphalt cold-patch to fill notch unless otherwise specified in the contract.
8. Use Schedule 40 PVC conduit from the Junction box to the Cabinet. Where there are 2 to 4 lanes, use one 1 1/4" min. conduit for each direction of travel. Where there are 5 lanes in either direction of travel, use one 2" min. conduit in each direction. Where there are 6 or more lanes in either directon, use one 3" min. conduit for each direction.
9. Use Schedule 80 PVC, HDPE, or steel conduit under the roadway. For conduit installation see **Standard Specification 8-20.3(5).**
10. Junction boxes installed in the paved shoulder or median shall be a Heavy Duty Junction box. If box is installed in unpaved shoulder, use type 1 or 2. See **Standard Plan J-40.10** for size and type. See **Standard Specification 9.29.2(1)B.** for further information.
11. All loop wire, loop leads, and piezo leads shall be labeled with colored electrical tape at all Junction Boxes, Pull Boxes and Cabinets, according to the Color Code Identification Chart. For Wire Color Code Detail see **Standard Plan J-50.30.**
12. Cabinet can be placed on either side of road depending on terrain/slope, etc. It does not have to be placed on increasing milepost side of the roadway.
13. For 6 - lane layouts and above, see Contract.

DETAIL (B)

NOTES

1. See **Standard Plan J-50.30** for Piezo Axle Sensor General Installation instructions, and Modified Type 2 Loop Wiring Details.
2. The Contractor shall notify the Statewide Travel and Collision Data Office (STCDO) (formerly TDO) a minimum of five working days prior to the scheduled site installation. An inspector from the WSDOT STCDO shall be on site for all phases of installation.
3. The loop inductance of two loops within the same lane shall be within 20 micro henries of each other. All piezo ohms readings shall be O\L from shield to center conductor. Class WIM piezo capacitance shall be 8nf to 20nf.
4. The loops and axle sensors shall be cut in the final lift of asphalt after lane striping is completed. All PTR loops shall be spaced @ 16 ft. leading edge to leading edge.
5. For concrete pavement lanes with asphalt shoulders, install all of the piezo sensors and splices in the concrete lane. Also, for concrete pavement lanes, install the loops 4" to 6" away from the expansion joints.
6. The shoulder notch length along the roadway shall be 4" or the conduit diameter plus 2" or whichever is larger. The shoulder notch width perpendicular to the roadway shall be the conduit size plus 1/4".
7. After all sensor leads are installed, seal the end of the conduit with conduit sealant. Use asphalt cold-patch to fill notch unless otherwise specified in Contract.
8. Use Schedule 40 PVC conduit from the Junction Box to the Cabinet. Where there are 2 to 4 lanes, use one 1 1/4" min. conduit for each direction of travel. Where there are 5 lanes in either direction of travel, use one 2" min. conduit for each direction. Where there are 6 or more lanes in either direction, use one 3" min. conduit for each direction.
9. Use Schedule 80 PVC, HDPE, or steel conduit under the roadway. For conduit installation, see **Standard Specification 8-20.3(5).**
10. Junction Boxes installed in the paved shoulder or median shall be a Heavy Duty Junction Box. If box is installed in unpaved shoulder use type 1 or 2. **See Standard Plan J-40.10** for size and type. See **Standard Specification 9-29.2(1)B**. for further information.
11. All loop wire, loop leads, and piezo leads shall be labeled with colored electrical tape at all Junction Boxes, Pull Boxes and Cabinets. For Wire Color Code Identification Chart & Detail see **Standard Plan J-50.30.**
12. Cabinet can be placed on either side of the road depending on terrain/slope, etc. It does not have to be placed on increasing milepost side of the roadway.
13. For 6-lane layouts and above, see Contract.
14. Concrete lanes shall use 11' class 1 piezos. Asphalt lanes with 1' shoulder or less may use 12' piezos. For shoulders over 1', use 13' piezos.

SAWCUT LAYOUT
FOR PERMANENT TRAFFIC RECORDER SITE
(MODIFIED TYPE 2 LOOP SHOWN)

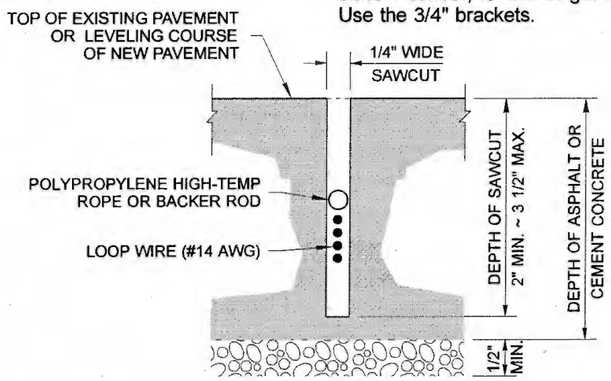

MODIFIED TYPE 2 ADVANCE
LOOP WIRING DIAGRAM

SECTION (A) SECTION (B)

BEFORE SENSOR INSTALLATION

SECTION (C)

THESE ARE GENERAL INSTALLATION INSTRUCTIONS

SEE SPECIFIC MANUFACTURER'S INSTALLATION INSTRUCTIONS IN THE SPECIAL PROVISIONS OF THE CONTRACT

1. Using paint and a straight edge, carefully mark the layout of the sensor installation. Ensure sensors are placed exactly perpendicular to the flow of traffic and that all lines are straight. Verify that the piezo coax length can reach the cabinet with a minimum of 8 ft. of cable inside the cabinet.
2. Using a wet-cutting pavement saw with a 3/4" blade width, cut the piezo slot approximately 4 to 6 inches longer than the piezo length. The piezo slot depth must be a minimum of 1" to a maximum of 1 1/2".
3. Lead-in cuts for the piezo coax should be 1/4" minimum wide, at a depth of 1 1/2" to 2".
4. Using a pressure washer, remove all slurry and loose material from the piezo slot.
5. Completely dry piezo slot. No moisture or oily residue shall be allowed in piezo slot.
6. After piezo cut is dry, wire brush sides and bottom of entire piezo slot. Blow out loose debris.
7. Install the piezo according to manufacturer's recommendations. Class 2 piezo sensors shall be placed at bottom of piezo slot. Class 1 sensors must be installed at a specific depth particular to each site location. This depth will be measured and set by Statewide Travel and Collision Data Office (formerly TDO) inspector on site.
8. Place two pieces of 2" duct tape along the length of the sensor slot. Tape should be about 1/16" from slot edge.
9. Mix epoxy according to manufacturer's recommendations and pour in slot into small bead. Make sure grout pours into slot slowly to avoid air pockets. Start at the piezo end and pour toward the coax to piezo attachment point. Repeat until the slot is completely full, at least two passes.
10. Use a putty knife with a notched center to spread the epoxy smooth the length of the sensor.
11. Remove tape.
12. Class 2 sensor installation is complete after epoxy has cured. Class 1 WIM sensors shall be sanded flush with the pavement surface the entire length of the piezo sensor. Use a belt sander with a coarse grit paper to get an even surface finish.
13. Lead-in placement and saw-cut methods vary depending on Regional preference and location. Coordination between WSDOT and Contractor is needed to determine method to be used prior to installation.
14. Place the Installation Brackets on the sensor every 12" for class 2 sensor, and every 8" for class 1 sensor, for the length of the sensor. Use the 3/4" brackets.

NOTES

1. If parallel circuits of different sizes are contained in one conduit, the size of the grounding conductor shall be determined on the basis of the largest conductor. Only one grounding conductor is required for each conduit, regardless of the number of circuits contained.
2. Service ground per serving utility requirement. If the utility uses aluminum service conductors, an approved Al-Cu pressure-type ground connector shall be used to secure the service neutral to the copper neutral bar in the service enclosure. Except for the above, all grounding conductors shall be copper.
3. Equipment grounding conductors and grounding electrode conductors shall be sized in accordance with the National Electric Code (No. 8 minimum).

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES

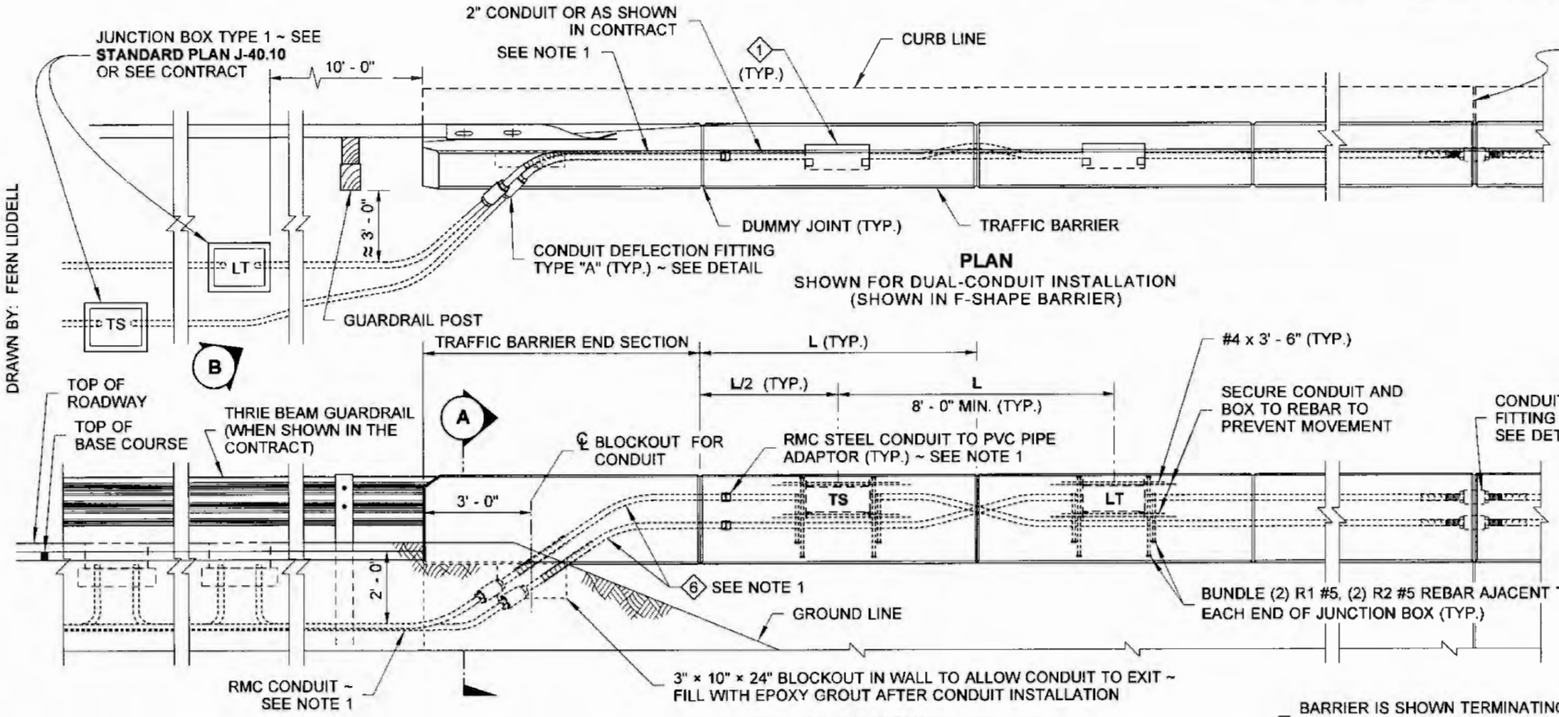

1. Install Galvanized Steel Rigid Metal Conduit (RMC) between the Junction Box(es) Type 1 and the DX fitting(s) "**A**". RMC conduit shall also be used from the DX fitting(s) "**A**" to the PVC adaptor in the barrier.

   PVC Conduit may be used only in stationary-form barriers. Connect to RMC using a PVC adaptor.

   RMC Conduit may be used in stationary-form barriers, but it shall be used in slip-form barriers.

2. See **Standard Plan D-15.10** for additional information on F-Shape barrier, or see Standard Plan **D-15.20** for Single-Slope Barrier.

3. Pipe wrap tape shall be 2" wide, 20 ml thick, and installed with 1" minimum overlap.

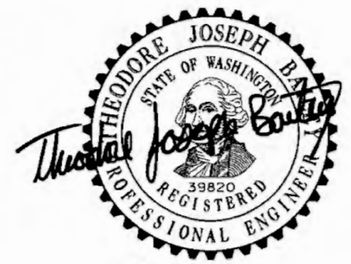

KEY NOTES

1. Junction Box (mount box so cover is flush with the barrier face with a 0" tolerance protruding beyond the barrier face and 1/8" recessed). Use NEMA 4X Junction Box with stationary-forms ~ See **Standard Plan J-40.36.** Use NEMA 3R Junction Box with slip-forms ~ See **Standard Plan J-40.37.**
2. Type DX Deflection (DX) Fitting with Internal Bonding Jumper.
3. Wrap Conduit Pipe from Conduit Deflection Fitting to 1' - 0" beyond (inside) barrier surface.
4. 1' - 0" long, 3/4" thick expanded closed-cell foam sleeve around conduit and conduit fitting. After placing wire ties, duct tape seams and ends to seal and prevent concrete from bonding with fitting and conduit.
5. Where conduit in a structure is routed across a joint, wrap the conduit pipe for 1' - 0" on each side of the joint.
6. 10' - 0" long section of RMC conduit.
7. Deflection Fitting shall be in neutral state after installation.

SCHEMATIC
SHOWN FOR DUAL-CONDUIT INSTALLATION
(CIRCUIT TYPES MAY VARY)

NOTES

1. Install a Conduit Deflection (DX) Fitting "**A**" at the exit from the barrier. Install a Conduit Deflection (DX) Fitting "**B**" to connect conduit ends at each concrete barrier expansion joint. See **Standard Plan J-60.11** for Conduit Deflection Fitting details.
2. Install Galvanized Steel Rigid Metal Conduit (RMC) between the Junction Box(es) Type 1 and the DX fitting(s) "**A**." RMC conduit shall also be used from the DX fitting(s) "**A**" to the PVC adaptor in the barrier.

   PVC conduit may be used only in stationary-form barriers. Connect to RMC using a PVC adaptor.

   RMC conduit may be used in stationary-form barriers, but it shall be used in slip-form barriers.
3. See **Standard Plan C-80.10** for additional details on Single-Slope Concrete Barrier.
4. See **Standard Plan J-60.11** for Conduit Deflection Fitting "**B**" detail ~ "Convert RMC to PVC in stationary-form barrier."
5. Pipe-wrap tape shall be 2" wide, 20 mil thick, and installed with 1" minimum overlap.

ELEVATION
(SHOWN FOR DUAL-CONDUIT INSTALLATION)

KEY NOTES

1. Junction Box (mount box so cover is flush with the barrier face with a 0" tolerance protruding beyond the barrier face and 1/8" recessed). Use NEMA 4X Junction Box with stationary-forms. See **Standard Plan J-40.36.** Use NEMA 3R Junction Box with slip-forms. See **Standard Plan J-40.37**.
2. Where conduit in a structure is routed across a cold joint with continuous reinforcing steel, install premolded joint filler and wrap the conduit pipe for 1' - 0" on each side of the joint. Omit pipe-wrap tape on PVC conduit.
3. Where conduit exits from a structure, wrap the conduit pipe for 1' - 0" on each side from the exiting point.
4. 10' - 0" long section of RMC conduit.
5. Conduit Deflection Fitting shall be in neutral state after installation.
6. Where conduit in a structure is routed across a joint, wrap the conduit pipe for 1' - 0" on each side of the joint.

NOTES

1. Drilling through reinforcing steel is not allowed. If steel is hit while drilling, the location shall be moved and the abandoned hole filled with grout conforming to **Standard Specification 6-02.3(20).** There shall be a minimum of a 3" edge distance to the center-line of anchor holes in concrete. Mount the stain-less steel support using an approved resin bonded anchor system. Anchors shall be stainless steel and shall be of 3/8" diameter (expansion anchors are not allowed). Anchor Bolt embedment of 4 1/2" minimum.
2. Number of clamps shall be determined by number of conduits to be attached to the Stainless Steel Channel Support. See Conduit Plans for conduit routing.
3. Add additional Attachment Bolts when required to maintain 8" maximum spacing between adjacent Attachment Bolts.
4. Stainless Steel Channel to be plumb to face of structure. Size spacer to maintain plumb line. When barrier is not plumb, size spacer to maintain back of barrier line.
5. See **Standard Plan J-60.14** for Column Mounting details.

NOTES

1. See Contract for head type, mounting height, and orientation.
2. All nipples, fittings, and center pipes shall be 1 1/2" (in) diameter.
3. Install neoprene gasket inside head when flanged elbows are supplied.
4. Extend wire sheath a minimum of 1" (in) inside all signal and sign housings and terminal compartments.
5. Apply bead of silicone to the serrated ring and around the perimeter of all top openings prior to installation of fittings.
6. See **Standard Specification 9-29.16** for backplate requirements. Where required, prismatic sheeting shall be applied in accordance with the manufacturer's recommendations. The application surface of the backplate shall be cleaned, degreased with isopropyl alcohol, and dried prior to application of the sheeting.
7. Drill a 1/4" (in) drain hole in the bottom of each signal display assembly, and one in the bottom of each pedestrian head. When signal display assembly is mounted horizontally, drill a 1/4" (in) drain hole at the lowest point of each section of the signal assembly.

DETAIL (A)

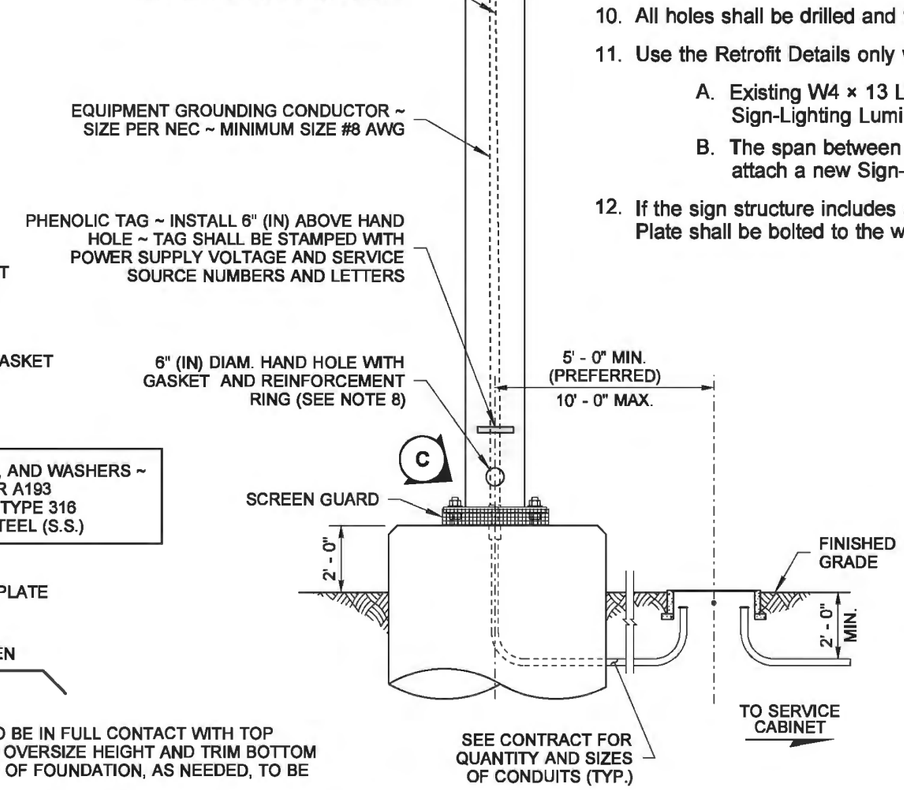

SECTION (B)

* BOLTS, NUTS, AND WASHERS ~ ASTM F593 OR A193 TYPE 304 OR TYPE 316 STAINLESS STEEL (S.S.)

DETAIL (C)

MONOTUBE SIGN STRUCTURE

(SEE CONTRACT FOR ORIENTATION OF SIGN STRUCTURE)

NOTES

1. Typical view shown. Verify power source location, quantities, location of signs, and sign structure fixtures in Contract Plans.
2. Route IMSA 20-1 3C #14 cable(s) from isolation switch along inside bottom of the Monotube Mast Arm to the liquidtight conduit connector(s) at hand hole(s).
3. Route separate IMSA 20-1 3C #14 cable from load side of terminal strip to each additional light fixture (where applicable) and provide sufficient slack wire per **Standard Specification 8-20.3(8).**
4. Label all conductors with sign light and circuit number at isolation switch, hand hole(s), and ballast enclosure(s). Labels shall be a PVC or Polyolefin wire marking sleeve per **Standard Specification 9-29.**
5. Install quick-disconnect fuse kits between the power supply wires and the pole and bracket cable per **Standard Specification 9-29.7.** Fuse size shall be 200% larger than load size.
6. The conductors in the IMSA 20-1 3C #14 cable shall be black, red, and white. The white conductor shall be permanently identified as an equipment grounding conductor per the NEC.
7. All GRS conduits embedded in foundation shall be terminated with Grounding End Bushing and bonded to the Foundation Grounding Bus. All PVC conduits embedded in foundations shall be terminated with End Bell Bushing.
8. Hand holes shall be installed at the time of fabrication. Only additional conduits for lighting accommodations to previously non-illuminated structures may be installed in field as long as the proper repairs are made to the structure. For hand hole details, see **Standard Plan J-75.41**.
9. For details not shown, see **Standard Plan G-90.40**.
10. All holes shall be drilled and tapped.
11. Use the Retrofit Details only when the following conditions apply:
    A. Existing W4 × 13 Luminaire Brackets are to be reused for a new Sign-Lighting Luminaire.
    B. The span between the existing Luminaire Brackets is too wide to attach a new Sign-Lighting Luminaire and Luminaire Mounting Plate.
12. If the sign structure includes a maintenance walkway, the Luminaire Mounting Plate shall be bolted to the walkway grating.

PLAN VIEW
LUMINAIRE NOT SHOWN FOR CLARITY

1 THE PRESENCE OF A BARRIER HANDRAIL SHALL BE VERIFIED PRIOR TO FABRICATION.

2 NEMA 3R STAINLESS STEEL TERMINAL CABINET **"a"** ~ ONE REQUIRED ON STANDARD FARTHEST AWAY FROM THE TRAFFIC SIGNAL CONTROLLER CABINET ~ TWO REQUIRED ON THE STANDARD NEAREST TO THE TRAFFIC SIGNAL CONTROLLER CABINET ~ SEE **STD. SPEC. 9-29.25.**

ELEVATION VIEW

DESIGN CRITERIA

SIGNAL BRIDGE SHALL BE DESIGNED AND ANALYZED IN ACCORDANCE WITH **AASHTO STANDARD SPECIFICATION FOR STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS, LUMINAIRE AND TRAFFIC SIGNAL - FIFTH EDITION - DATED 2009** AND INTERIMS. USING BASIC WIND SPEED OF **90 MPH** AND **50 YEARS** OF DESIGN LIFE. FATIGUE DESIGN OF THE STRUCTURE CONFORMS TO **FATIGUE CATEGORY I** OF THE SPECIFIED AASHTO STANDARD SPECIFICATION.

NOTES

1. Typical view shown. See Contract Plans for quantities and locations of signal heads, EVP detectors, cameras, and signs.
2. Route signal cable(s) from terminal cabinet along inside bottom of the Signal Bridge to the Tenon(s) connector(s) at hand hole(s). Provide sufficient slack wire to allow the conductor or cable to be pulled a minimum of 18" (in) outside the Signal Bridge at the nearest hand hole to the equipment connection point.
3. All conductors shall be labeled in accordance with **Standard Specification 8-20.3(8)**. Labels shall be provided at the terminal cabinet (at the terminal board and conduits), equipment terminals, and at the hand hole nearest equipment connection point.
4. All RMC conduits embedded in foundation shall be terminated with a grounding end bushing and bonded to the structure grounding terminal. All PVC conduits embedded in foundations shall be terminated with end bell bushing.
5. Hand holes shall be installed at the time of fabrication.
6. Install hand hole on outside of the post at beam level when foundation is cast at grade. Install hand hole on traffic side of post when signal bridge is mounted on bridge, retaining wall or other structure.
7. Grounding conductor shall be non-insulated # 4 AWG copper with 3' (ft) minimum slack. Clamp to horizontal steel reinforcing with a listed connector suitable for use embedded in concrete. For details, see Elevation View Signal Bridge Hand Hole Placement on Standard, Sheet 2. Or see Foundation Detail in Bridge Deck or Bridge Deck Island, Sheet 2.
8. Grounding conductor shall be non-insulated #4 AWG copper with 3' (ft) minimum slack. Clamp to vertical steel reinforcing with a listed connector suitable for use embedded in concrete. For Detail, see Partial Foundation Detail, Sheet 2.
9. Signal bridge foundation shall be designed by the Engineer of Record for all installations (at grade, mounted on a bridge structure or on a wall structure).
10. Variable Message Signs (VMS) shall not be installed on signal bridge.
11. No sign larger than 12' (ft) long x 4' (ft) tall shall be installed on signal bridge.

STATE DESIGN ENGINEER DATE

Washington State Department of Transportation

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

EFFECTIVE: AUGUST 3, 2015 TO July 31, 2016

NOTES

1. Typical view shown. Verify power source location, quantities, and location of signs and sign structure fixtures in Contract Plans.
2. Route separate IMSA 20-1 3C #14 cables from load side of terminal strip to each additional Sign-Lighting Luminaire (where applicable) and provide sufficient slack wire per **Standard Specification 8-20.3(8).**
3. Label all conductors with sign light and circuit number at isolation switch, handhole, and ballast enclosure. Label shall be a PVC or Polyolefin wire marking sleeve per **Standard Specification 9-29.**
4. Install quick-disconnect fuse kits between the power supply wires and pole and bracket cable per **Standard Specification 9-29.7.** Fuse size shall be 200% larger than load size.
5. The conductors in the IMSA 20-1 3C #14 cable shall be black, red, and white. The white conductor shall be permanently identified as an equipment grounding conductor per the NEC.
6. All GRS conduits embedded in foundation shall be terminated with grounding end bushing and bonded to the ground terminal in the base of pole. All PVC conduits embedded in foundations shall be terminated with end bell bushing.
7. Hand holes shall be installed at the time of fabrication. Only additional conduits for lighting accommodations to previously non-illuminated structures may be installed in field as long as the proper repairs are made to structure.
8. For details not shown, see **Standard Plan G-90.40**.
9. All holes shall be drilled and tapped.
10. Use the Retrofit details only when the following conditions apply:
    - A. Existing W4 × 13 Steel Beam sign brackets are to be reused for a new Sign-Lighting Luminaire.
    - B. The span between the existing Luminaire Brackets is too wide to attach the new Sign-Lighting Luminaire and Luminaire Mounting Plate.
11. If the sign structure includes a maintenance walkway, the Luminaire Mounting Plate shall be bolted to the walkway grating.

PULL BOX ASSEMBLY
(SHOWN WITH STANDARD DUTY LID)

NOTES

1. The Heavy Duty Lid shall be used when a Pull Box is placed in the paved shoulder or the traveled way. Use a 9" thick lid for new Pull Box installations. Use a 6" thick Heavy Duty Lid when converting a Standard Duty Pull Box into a Heavy Duty Pull Box in the paved shoulder or the traveled way and no overlay is called for in the Contract. Otherwise, see Contract Plans for overlay depth and fabricate lid thickness to match overlay depth.
2. Use Standard Duty Pull Box and Lid when placed in unpaved areas. Use Standard Duty Pull Box in sidewalks, walkways, and shared-use paths.
3. Minimum lid thickness shown. The diamond pattern shall be a minimum of 3/32" thick.
4. Standard Duty Pull Boxes installed in sidewalks, walkways, and shared-use paths shall have a slip-resistant coating on lid and shall be installed with the surface flush with and matched to the grade of the sidewalk, walkway, and shared-use paths. The non-slip lid shall be identified with permanent marking on the underside indicating the type of surface treatment (see Contract Documents for details) and the year of manufacture. The permanent marking shall be 1/8" inch line thickness formed with a stainless steel weld bead and shall be placed prior to hot-dip galvanizing.
5. A 1/4-20 UNC × 3/4" S. S. ground stud with (2) S. S. nuts and (2) S. S. flat washers shall be attached to the Standard Duty Lid and coated with anti-seize compound. Provide a 5/8" diameter cored hole in the ductile iron lid gusset (Heavy Duty Lid) with 1/2-13 UNC × 1 1/4" S. S. bolt, (3) S. S. flat washers, and (2) S. S. nuts for the Bonding Jumper.
6. Connect a Bonding Jumper to the steel conduit bushing for GRS conduit and connect the steel conduit bushing jumper to the equipment ground at the threaded brass ground insert. Connect the equipment grounding conductors in the PVC and/or GRS conduits to the brass ground insert. The Bonding Jumper shall be #8 min. x 4' (ft.) of tinned braided copper between the lid and the frame of the Heavy Duty tops and from the Heavy Duty top to the threaded brass ground insert. The Bonding Jumper shall be #8 min. x 4' (ft.) of tinned braided copper between the lid on a Standard Duty Pull Box and the threaded brass ground insert. See Contract Plan Sheets and **Standard Plan J-60.05** for Bonding Jumper requirements.
7. The system identification letters shall be 1/8" line thickness formed by engraving, casting, stamping, or with a S. S. weld bead. See COVER MARKING DETAIL. See **Standard Specification 9-29.2(4).** Ductile iron lid lettering shall be recessed.
8. Cement concrete shall be Class 4000.
9. Plastic plugs shall be put into the lid inserts after fabrication and the lid installation.
10. Capacity - conduit diameter = 40" (in.).
11. Excavate material, place 6" crushed surfacing pad per **Standard Specification Section 8-20.3(6).** Field bend #3 reinforcing bar to allow conduit into the Pull Box. Field bend reinforcing bar back into place, wire tie in (2) places, and cast in commercial concrete (commercial concrete only allowed for box bottom/wall completion).
12. This drawing depicts a typical Pull Box assembly. Reinforcing not shown. Each manufacturer's Pull Box assembly will vary. Refer to the approved manufacturer's shop drawings for all dimensions and the actual arrangement.

NOTES

1. The Heavy Duty Lid shall be used when a Cable Vault is placed in the paved shoulder or the traveled way. Use a 9" thick lid for new Cable Vault installations. Use a 6" thick Heavy Duty Lid when converting a Standard Duty Cable Vault into a Heavy Duty Cable Vault in the paved shoulder or the traveled way and no overlay is called for in the Contract. Otherwise, see Contract Plans for overlay depth and fabricate lid thickness to match overlay depth.
2. Use Standard Duty Cable Vault and Lid when placed in unpaved areas. Use Standard Duty Pull Box in sidewalks, walkways, and shared-use paths.
3. Minimum lid thickness shown. The diamond pattern shall be a minimum of 3/32" thick.
4. Standard Duty Cable Vaults installed in sidewalks, walkways, and shared-use paths shall have a slip-resistant coating on the lid and shall be installed with the surface flush with and matched to the grade of the sidewalk, walkway, and shared-use paths. The non-slip lid shall be identified with permanent marking on the underside indicating the type of surface treatment (see Contract Documents for details) and the year of manufacture. The permanent marking shall be 1/8" inch line thickness formed with a stainless steel weld bead and shall be placed prior to hot-dip galvanizing.
5. A 1/4 - 20 UNC × 3/4" S. S. ground stud with (2) S. S. nuts and (2) S. S. flat washers shall be attached to the Standard Duty Lid and coated with anti-seize compound. Provide a 5/8" diameter cored hole in the ductile iron lid gusset (Heavy Duty Lid) with 1/2 - 13 UNC × 1 1/4" S. S. bolt, (3) S. S. flat washers, and (2) S. S. nuts for the Bonding Jumper.
6. Connect a Bonding Jumper to the steel conduit bushing for GRS conduit and connect the steel conduit Bushing Jumper to the equipment ground at the threaded brass ground insert. Connect the equipment grounding conductors in the PVC and/or GRS conduits to the brass ground insert. The Bonding Jumper shall be #8 min. x 4' (ft.) of tinned braided copper between the lid and the frame of the Heavy Duty tops and from the Heavy Duty top to the threaded brass ground insert. The Bonding Jumper shall be #8 min. x 4' (ft.) of tinned braided copper between the lid on a Standard Duty vault and the threaded brass ground insert. See Contract Plan Sheets and **Standard Plan J-60.05** for Bonding Jumper requirements.
7. The system identification letters shall be 1/8" line thickness formed by engraving, casting, stamping, or with a S. S. weld bead. See COVER MARKING DETAIL, **Standard Specification 9-29.2(4).** Ductile iron lid lettering shall be recessed.
8. Cement concrete shall be Class 4000.
9. Plastic plugs shall be put into the lid inserts after fabrication and the lid installation.
10. Capacity - conduit diameter = 60" (in.).
11. Excavate material, place 6" crushed surfacing pad per **Standard Specification 8-20.3(6).** Field bend #3 reinforcing bar to allow conduit into the Cable Vault. Field bend reinforcing bar back into place, wire tie in (2) places and cast in commercial concrete (commercial concrete only allowed for bottom/wall completion).
12. This drawing depicts a typical Cable Vault assembly. Reinforcing not shown. Each manufacturer's Cable Vault assembly will vary. Refer to the approved manufacturer's shop drawings for all dimensions and the actual arrangement.

OPTION 1

OPTION 2

NOTES

1. The Small Cable Vault shall be used in unpaved areas, and shall not be installed in the paved shoulders or traveled way. Use Small Cable Vault in sidewalks, walkways, and shared-use paths. Heavy Duty Cable Vault shall be used when installed in the paved shoulder or the traveled way.
2. The diamond pattern shall be a minimum of 3/32" (in) thick.
3. Small Cable Vaults installed in sidewalks, walkways, and shared-use paths shall have a slip-resistant coating on the lid and shall be installed with the surface flush with and matched to the grade of the sidewalk, walkway, and shared-use paths. The non-slip lid shall be identified with permanent marking on the underside indicating the type of surface treatment (see Contract Documents for details) and the year of manufacture. The permanent marking shall be 1/8" (in) line thickness formed with a stainless steel weld bead and shall be placed prior to hot-dip galvanizing.
4. A 1/4 - 20 UNC × 3/4" (IN) ground stud with two nuts and two flat washers shall be welded to each lid and coated with anti-seize compound. A 1/4 - 20 UNC × 3/4" (IN) ground stud with two nuts and three flat washers shall be welded to the frame and coated with anti-seize compound.
5. Connect a bonding jumper to the steel conduit bushing for RMC conduit and connect the steel conduit bushing jumper to the equipment ground at the hex coupling nut welded to the stainless steel channel. Connect the equipment grounding connectors in the PVC and/or RMC conduits to the hex coupling nut. The bonding jumper shall be #8 min. x 1' (ft) of tinned braided copper between the lid and the frame and shall be #8 min. x 4' (ft) of tinned braided copper from the frame to the hex coupling nut. See Contract Plans and **Standard Plan J-60.05** for bonding jumper requirements.
6. The system identification letters shall be 1/8" (in) line thickness formed by engraving, stamping, or with a stainless steel weld bead. See COVER MARKING DETAIL, **Standard Specification 9-29.2(4)**.
7. Cement concrete shall be Class 4000.
8. Capacity - conduit diameter = 40" (in).
9. Vault shall be installed on 6" (in) crushed surfacing pad in accordance with **Standard Specification 8-20.3(6).**
10. Typical Small Cable Vault features and arrangement shown. Reinforcing not shown. Dimensions and arrangements will vary slightly by manufacturer ~ See Approved shop drawings.
12. Small Cable Vaults for WSDOT Projects shall only be installed with the lid frame bearing on the concrete portion of cable vault.
13. Location wire splice shall be molded splice enclosure or splice connector with terminal connection.

HOT MIXED ASPHALT PAVEMENT | **BITUMINOUS SURFACE TREATMENT**

TWO-LANE ROADWAY

HOT MIXED ASPHALT PAVEMENT | **BITUMINOUS SURFACE TREATMENT**

ONE-WAY TWO-LANE ROADWAY

HOT MIXED ASPHALT PAVEMENT | **BITUMINOUS SURFACE TREATMENT**

TWO-WAY TWO-LANE LEFT TURN ROADWAY

NOTES

1. For long term projects conflicting pavement markings that are no longer applicable shall be removed or obliterated. Temporary markings shall be used as necessary.
2. For Hot Mixed Asphalt Pavement, a temporary striping tape shall be installed in conjunction with DO NOT PASS and "PASS WITH CARE" sign locations.
3. Temporary roadside delineation with Channelization Devices is optional. The appropriate taper length shall be L/2. See Standard Plan K-24.20 for minimum taper length (L).
4. For long term projects a channelization/pavement marking plan should be implemented.
5. Temporary Raised Pavement Marker (TRPM) may be used on a pattern spacing 5' O.C. to simulate a solid line.

SIGN INSTALLATION (FILL SECTION)

SIGN INSTALLATION (CURB SECTION)

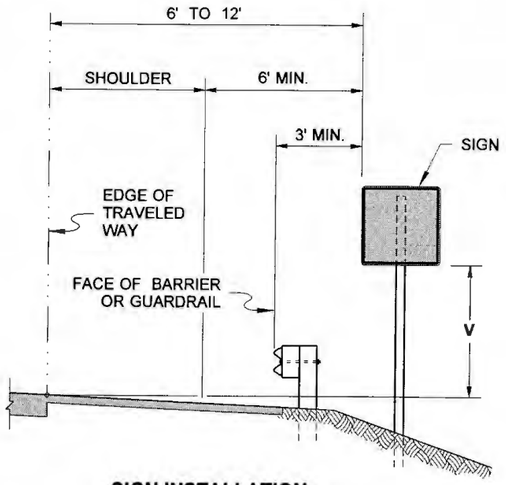

SIGN INSTALLATION (SIDEWALK AND CURB SECTION)

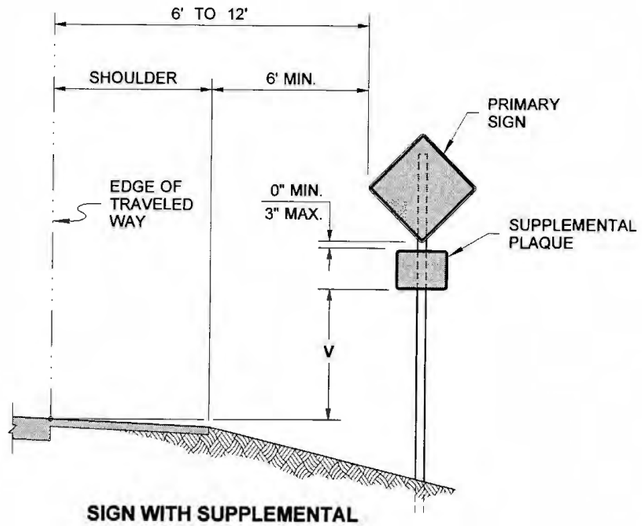

NOTES

1. For sign installation details, see Std. Plan G - series.
2. In rural areas, the "V" Height can be a minimum of 7 feet for primary signs and 6 feet for the supplemental plaques for greater visibility, as directed by the engineer.
3. The "V" height for signs, with an area of more than 50 square feet and two or more sign supports, is 7 feet in both rural and urban areas.

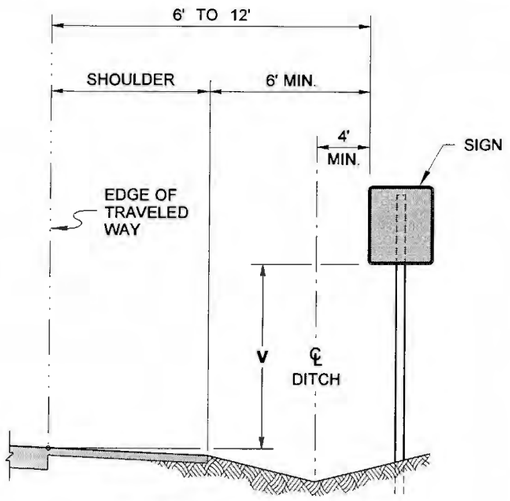

HEIGHT V		
	TO BOTTOM OF SIGN (NO SUPPLEMENTAL PLAQUE)	TO BOTTOM OF SUPPLEMENTAL PLAQUE (WHEN REQUIRED)

WARNING LIGHT ATTACHMENT DETAIL

ELEVATION

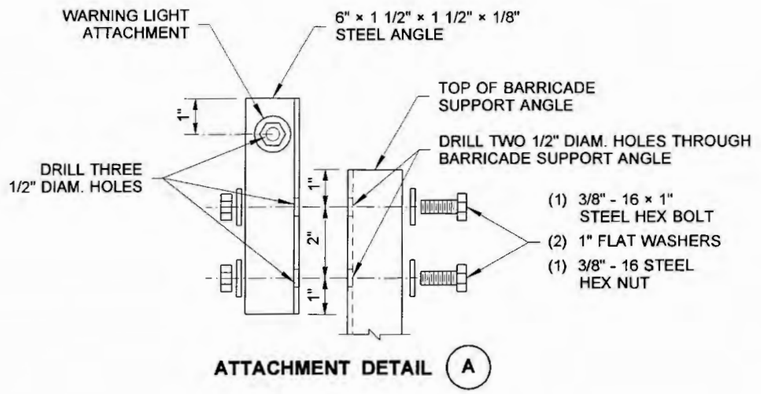

SIDE

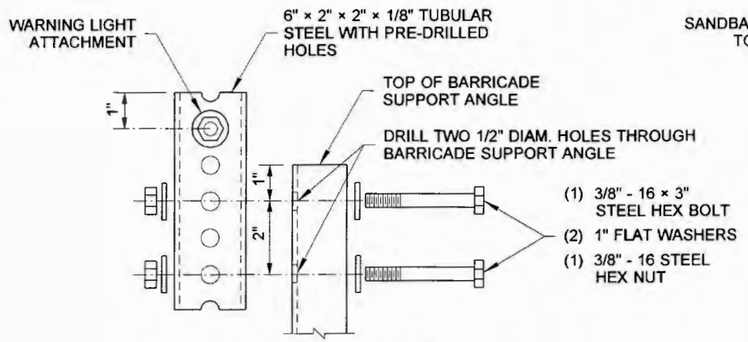

TYPE 3 BARRICADE

NOTES

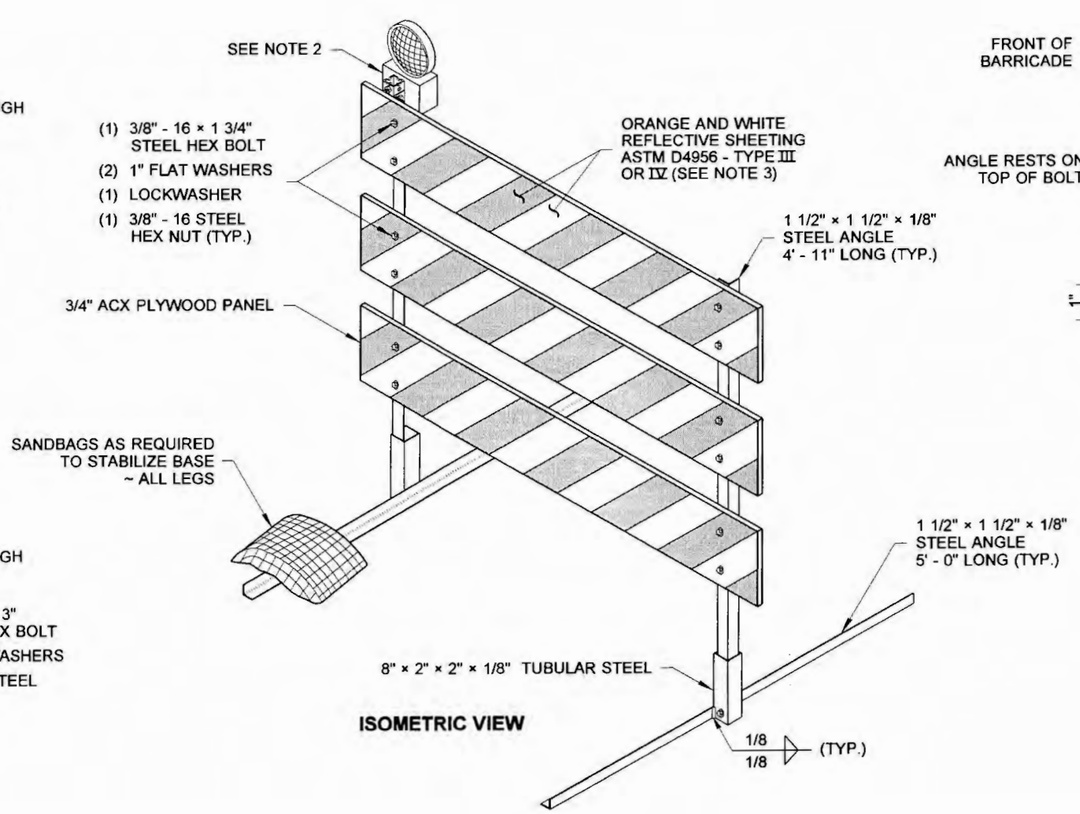

1. All fasteners may be zinc plated, galvanized or stainless steel. All steel angle and tubular steel shall be hot-rolled, high carbon steel, painted or galvanized.
2. Install one lightweight Type A Low-Intensity flashing warning light on the traffic side of the barricade. Install two Type A Low-Intensity flashing warning lights per barricade when the barricades are used to close a roadway. Attach the light to the barricade according to the light manufacturer's recommendations or use the details shown on this plan.
3. Stripes on barricade rails shall be alternating orange and white retroreflective stripes (sloping downward at an angle of 45 degrees in the direction traffic is to pass).
4. The Type 3 barricade design shown on this plan meets the crash test requirements of NCHRP 350. Alternative designs may be approved if they conform to the NCHRP 350 crash test criteria and the MUTCD.
5. When a sign is mounted on the barricade, it shall be securely bolted to at least two plywood panels. The top of the sign shall not be higher than the top panel of the barricade.
6. When sandbags are used in freezing weather, Urea fertilizer shall be mixed with the sand in a quantity to prevent the sand from freezing.

ATTACHMENT "A" DETAIL

ATTACHMENT "B" DETAIL

DRAWN BY: MARK SUJKA

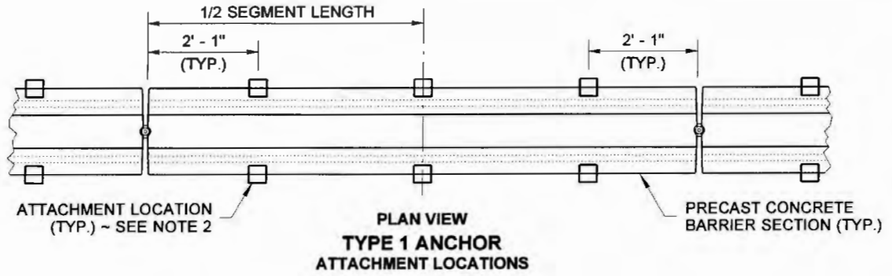

NOTES

1. Use Type 1 Anchors when the concrete pavement or bridge deck is 6" or thicker with 2' wide concrete barrier only. Use Type 2 Anchors (Standard Plan K-80.37) with narrow base barrier.
2. Adjust the location of the Type 1 Anchors to avoid the main reinforcing in the deck when drilling holes.
3. Use shims to properly fit the Type 1 Anchors to the barrier and roadway surfaces.
4. Upon removal of the Type 1 Anchors, clean the bolt holes and fill them with grout according to Standard Specification 6.02.3(20).
5. Remove the Type 3 Anchors by first driving the steel pins down through the barrier further into the pavement to allow lifting the barrier without interference, then remove the pins from the pavement.
6. After removing the Type 3 Anchors, clean the pin holes and fill them with sealant according to Standard Specification 9-04.2.

1. Where shown on the plans or specified in the Special Provisions, raised pavement markers shall be used to supplement or substitute for the painted pavement markings shown hereon. See the Standard Plans for RPM supplement and substitution patterns.
2. When weaving section is more than 3/4 of a mile in length, use lane line.
3. The channelization shown on this plan assumes optimal roadway geometric design. The dimensions may vary to fit existing conditions. See Contract.

NOTES

1. The channelization shown on this plan assumes optimal roadway geometric design. The dimensions may vary to fit existing conditions. See Contract.
2. The channelization shown on this plan is for a two-lane highway. The channelization plan may be used on four-lane undivided highways, with the appropriate considerations.
3. Centerline striping on the approach to raised channelization shall be No Pass in accordance with MUTCD figure 3B-15. Centerline striping on the departure from raised channelization shall be determined by an engineering study.
4. Centerline striping on the approach to and departure from painted channelization shall be determined by an engineering study.
5. Centerline striping on four-lane undivided highways shall be a double centerline.
6. The two Type 2L (SL) Traffic Arrows shown in the left-turn storage lane are optional, but recommended. Arrows may be added for longer storage lanes or deleted for shorter storage lanes. See Contract Plans.

TWO-LANE TWO-WAY TRAFFIC

MULTILANE ONE-WAY TRAFFIC

LEFT EDGE OF LANE PLACEMENT DETAIL
(SEE NOTE 2)

WIDE DOTTED LANE LINE DETAIL
(SEE NOTE 5)

NOTES

1. Raised Pavement Markers Types 2YY and 2W shall be spaced at 80' (ft) intervals on tangents and on horizontal curves with a radius of 1500' (ft) or more, and at 40' (ft) intervals on horizontal curves having radii of less than 1500' (ft). Center the RPMs in the gaps between the pavement marking lines.
2. Type 2Y RPMs, when specified, shall be placed outside the left Edge Line at 80' (ft) intervals. See "LEFT EDGE OF LANE PLACEMENT DETAIL."
3. Recessed pavement markers, when specified, shall be installed at the locations shown for Type 2W RPMs on multilane one-way roadways, and Type 2YY RPMs on two-lane two-way roadways.
4. The Type 2W RPMs placed on multilane one-way roadways and all RPMs set in recesses shall have an abrasion-resistant coating.
5. Do not recess side-to-side RPMs on Wide Dotted Lane Lines.

TYPE 2 RPM RAISED FACE COLORS

GROUND MOUNT

FLEXIBLE GUIDE POST
SURFACE MOUNT

FLEXIBLE GUIDE POST
GUARDRAIL MOUNT
(USE FOR WOODEN GUARDRAIL POSTS)

FLEXIBLE GUIDE POST
GUARDRAIL MOUNT
(USE FOR STEEL GUARDRAIL POSTS)

NOTES

1. When the Contract Plans requires a guide post with concurrent guardrail runs, the Contractor shall either:
   - **A.** Drive the flexible guide post in line with the guardrail posts, or
   - **B.** Mount the shorter flexible guide post onto the guardrail post.
2. Guide posts shall be fastened to the wooden guardrail post using two 2" (in) × 3/8" (in) lag screws with washers, along centerline of post. Also acceptable is any approved attachment method submitted by the guide post manufacturer.
3. Guide posts shall be fastened to the steel guardrail posts using two galvanized 2" (in) × 3/8" (in) bolts with a washer on both sides, a lock washer, and nut. The nut shall be tightened to properly compress the lock washer. The drilled holes in the guardrail post web shall be painted with galvanizing repair paint as described in **Standard Specification Section 8-11.3(1)B**. Also acceptable is any approved attachment method submitted by the guide post manufacturer.
4. When concrete barrier runs concurrent, the Contractor shall mount Barrier Delineators where guide posts are required.

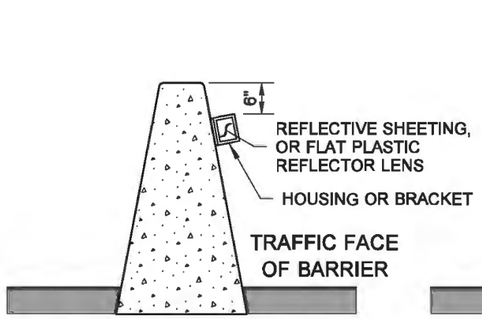

GUIDE POST TYPE DEFINITIONS ~ REFLECTIVE SHEETING APPLICATIONS

TYPE W	TYPE WW	TYPE Y	TYPE YY
○	◐	●	⊕
FACING TRAFFIC: 3" × 8" WHITE	FACING TRAFFIC: 3" × 8" WHITE; BACK SIDE: 3" × 4" WHITE, 4" gap, 4" WHITE	FACING TRAFFIC: 3" × 8" YELLOW	FACING TRAFFIC: 3" × 8" YELLOW; BACK SIDE: 3" × 8" YELLOW

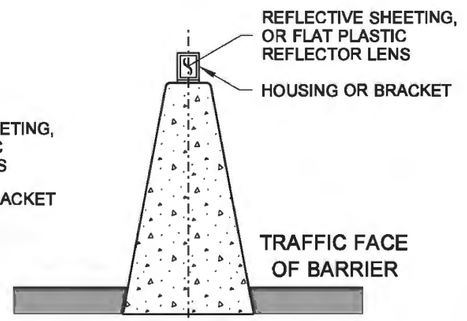

BARRIER DELINEATOR REQUIREMENTS

- Spacing of Barrier Delineators shall be as shown in the Plans.
- The housing or bracket can be flexible or rigid, molded from a durable plastic or other durable material approved by the Engineer, and shall be attached to the barrier with an adhesive recommended by the manufacturer. The attachment point on the barrier surface shall be free of dirt, curing compound, moisture, paint, or any other matter that would adversely affect the adhesive bond.
- Barrier Delineators shall be one-sided for single direction traffic, or two-sided for bi-directional traffic.
- Color shall be white on the right of traffic, and yellow on the left of traffic.
- The reflective surface shall be rectangular or trapezoidal.
- Reflective Sheeting: 12 square inches minimum surface area; Type III, IV, V, or VI, selected from approved materials listed in the Qualified Products List.
- Plastic Reflector: 9 square inches minimum surface area; acrylic or polycarbonate conforming to AASHTO M 290. Reflectors shall equal or exceed the following minimum values of Specific Intensity:

OBSERVATION ANGLE	ENTRANCE ANGLE	SPECIFIC INTENSITY (cd/ft-c)	
		WHITE	YELLOW
0.1°	0°	126	75
0.1°	20°	50	30
