

Local Programs ADA Post Construction Inspection Form Guidance

This form will be used for the Contractor's documentation of the latitude and longitude in accordance with the Special Provisions.

"The Contractor shall complete the measurements and verify all ADA features in the presence of the Engineer."

Incomplete forms will be returned to the inspector for verification and correction.

Location Information

Location of sidewalks and ramps shall be referenced by linear latitude and longitude measurements of the site location. If there is more than one ramp at each corner, all ramps need to be documented.

Non-Compliant Construction

Generally, a non-compliant sidewalk, or ramp will not be allowed to remain in place. If non-compliance is due to Contractor's performance or any reason that is not determined technically infeasible, structurally impracticable or a safety issue, the ramp will need to be made compliant before the project is considered substantially complete.

Distribution

The Contractor shall submit the completed ADA Post-Inspection form to the Contracting Agency.

After acceptance, the Contracting Agency will retain this information and if required, update their official agency ADA inventory/transition plan.

In the case where the ADA features are revised on a State Highway, the Contracting Agency will forward the form to the WSDOT ADA Steward at ADASTeward@wsdot.wa.gov.
